## Part I Hot Cracking Phenomena I—Testing

<b>A Historical Perspective on Vareststraint Testing and the Importance of Testing Parameters</b> . . . . .	3
Joel Andersson, Jonny Jacobsson and Carl Lundin	
<b>Improved Understanding of Vareststraint Testing—Nickel-Based Superalloys</b> . . . . .	25
Joel Andersson, Jonny Jacobsson, Anssi Brederholm and Hannu Hänninen	
<b>Towards Establishment of Weldability Testing Standards for Solidification Cracking</b> . . . . .	37
N. Coniglio and C.E. Cross	
<b>Use of Computational and Experimental Techniques to Predict Susceptibility to Weld Cracking</b> . . . . .	67
A.T. Hope and J.C. Lippold	

## Part II Hot Cracking Phenomena II—Design Considerations

<b>Considerations for Sound Parameter Studies in Electron Beam Welding of Thick Walled Components</b> . . . . .	87
C. Wiednig, N. Enzinger and C. Beal	
<b>Consideration of Welding-Specific Component Design on Solidification Crack Initiation</b> . . . . .	101
Christian Gollnow and Thomas Kannengießner	
<b>Prediction of Ductility-Dip Cracking in Narrow Groove Welds Using Computer Simulation of Strain Accumulation</b> . . . . .	119
Steven L. McCracken and Jonathan K. Tatman	

### Part III Hot Cracking Phenomena—Materials

**Ductility-Dip Cracking Susceptibility of Commercially Pure Ni and Ni-Base Alloys Utilizing the Strain-to-Fracture Test. . . . .** 145  
Vern C. Kreuter V and John C. Lippold

**Evaluation of Solidification Cracking Susceptibility in Austenitic Stainless Steel Welds Using Laser Beam Welding Transverse-Varestraint Test. . . . .** 161  
Eun-Joon Chun, Hayato Baba, Kazutoshi Nishimoto and Kazuyoshi Saida

**Comparative Evaluation of Mesoscale Sensitivity to Crack Formation in Multi-pass Welds Using Wires IN52 and IN52MSS . . . . .** 207  
K.A. Yushchenko, V.S. Savchenko, A.V. Zvyagintseva, N.O. Chervyakov and L.I. Markashova

**Welding Optimization of Dissimilar Copper-Aluminum Thin Sheets with High Brightness Lasers . . . . .** 219  
Fidel Zubiri, María del Mar Petite, Jaime Ochoa and María San Sebastian

**Elevated Temperature, Solid-State Cracking in Welds . . . . .** 229  
John C. Lippold

### Part IV Hot Cracking Susceptibility of Ni-Base Alloys

**Weldability Evaluation of High Chromium, Ni-Base Filler Metals Using the Cast Pin Tear Test . . . . .** 269  
Eric Przybylowicz, Boian Alexandrov, John Lippold and Steven McCracken

**Multi-scale Modeling of the Stress-Strain State During Welding of Ni-Based Alloys . . . . .** 289  
K.A. Yushchenko, V.S. Savchenko, N.O. Chervyakov, A.V. Zvyagintseva and E.A. Velikoivanenko

**Weldability of Cast and Wrought Nickel Base Alloys 59, 617 and 625 . . . . .** 305  
C. Fink, M. Zinke and S. Jüttner

### Part V Cold Cracking Phenomena

**Numerical Investigations on Hydrogen-Assisted Cracking in Duplex Stainless Steel Microstructures . . . . .** 329  
T. Mente and Th. Boellinghaus

**Hydrogen Assisted Cracking of a Subsea-Flowline . . . . .** 361  
Th. Boellinghaus, E. Steppan and T. Mente

**Part VI Stress Corrosion and Cold Cracking Phenomena**

**Numerical Modelling of Hydrogen Assisted Cracking in Steel Welds. . . . . 383**

Th. Boellinghaus, T. Mente, P. Wongpanya, E. Viyanit and E. Steppan

**Metallurgical Factors Influencing the Susceptibility of Hydrogen Assisted Cracking in Dissimilar Metal Welds for Application Under Cathodic Protection . . . . . 441**

D. Bourgeois, B. Alexandrov, J. Lippold and J. Fenske

**Hydrogen Trapping in Supermartensitic Stainless Steel TIG Welds. . . . 457**

Th. Boellinghaus and D. Eliezer

**Part VII Elevated Temperature Solid-State Cracking**

**Stress-Relief Cracking in Simulated-Coarse-Grained Heat Affected Zone of a Creep-Resistant Steel . . . . . 475**

Katherine Strader, Boian T. Alexandrov and John C. Lippold

**Testing Approaches for Stress Relaxation Cracking in Gamma-Prime Strengthened Ni-Base Alloys. . . . . 495**

David C. Tung and John C. Lippold
