## Contents

1 Impulsive Dynamics and Measure Differential Equations .......................... 1
   1.1 Impulsive Forces .................................................. 1
   1.2 Measure Differential Equations (MDEs) .......................... 7
      1.2.1 A First Class of MDEs .................................... 8
      1.2.2 A Second Class of MDEs: ODEs Driven
           by Measure Inputs ........................................ 11
      1.2.3 Further Reading ............................................. 15
      1.2.4 A Third Class of MDEs: ODEs with State Jump
           Mappings .................................................... 16
      1.2.5 Further Reading ............................................. 18
   1.3 Systems Subject to Unilateral Constraints .......................... 19
      1.3.1 General Considerations .................................... 19
      1.3.2 Flows with Collisions (Vibro-Impact Systems) .......... 26
      1.3.3 Unilaterally Constrained Systems: A Geometric
           Approach .................................................... 34
      1.3.4 Bilaterally Constrained Mechanical Systems
           and Impulsive Dynamics .................................... 38
   1.4 Changes of Coordinates in MDEs .................................. 39
      1.4.1 From Measure to Carathéodory Systems ................... 39
      1.4.2 Decoupling of the Impulsive Effects (Commutativity
           Conditions) .................................................. 42
      1.4.3 From Unilaterally Constrained Mechanical Systems
           to Filippov’s Differential Inclusions:
           the Zhuravlev–Ivanov Method .......................... 44

2 Viscoelastic Contact/Impact Rheological Models ............................ 51
   2.1 Simple Examples ................................................. 52
      2.1.1 From Elastic to Hard Impact ............................ 52
      2.1.2 From Damped to Plastic Impact .......................... 55
      2.1.3 The General Case ........................................... 56
2.2 Viscoelastic Contact Models and Restitution Coefficients .......... 66
  2.2.1 Linear Spring-Dashpot ........................................ 66
  2.2.2 Nonlinear Elasticity and Viscous Friction:
                   Simon-Hunt-Crossley and Kuwabara-Kono
                   Dissipations .............................................. 68
  2.2.3 Conclusions .................................................. 77

2.3 Viscoelastic Models with Dry Friction Elements:
       Viscoelasto-Plastic Models ...................................... 78
  2.3.1 Conclusions and Further Reading .............................. 82

2.4 Penalizing Functions in Mathematical Analysis .................. 83
  2.4.1 The Elastic Rebound Case .................................... 83
  2.4.2 The Case with Dissipation (Linear Viscous Friction) ....... 84
  2.4.3 Uniqueness of Solutions .................................... 89
  2.4.4 Further Existence and Uniqueness Results .................... 92

2.5 Some Comments on Compliant Models ................................ 93

3 Variational Principles .............................................. 95
  3.1 Virtual Displacements, Velocities, and Accelerations
                   Principles .................................................... 95
                   The “Classical” Presentation .................................. 95
                   Using Variational and Quasi-Variational Inequalities
                   Formalisms ................................................... 98

  3.2 A Coordinate Invariance Principle ................................ 102
                   Perfect Constraints ........................................ 103

  3.3 Gauss’ Principle .................................................. 104
                   Further Reading ............................................. 105

  3.4 Lagrange Dynamics ................................................ 107
                   External Impulsive Forces ................................... 107
                   Example: Flexible Joint Manipulators ....................... 108

  3.5 Hamilton’s Principle and Unilateral Constraints ............... 110
                   Hamilton’s Principle Without Impacts ..................... 110
                   Hamilton’s Principle With Impacts ........................ 111
                   Modified Set of Curves ...................................... 115
                   Modified Lagrangian Function ................................ 119
                   Additional Comments and Studies .......................... 122

4 Two Rigid Bodies Colliding .......................................... 127
  4.1 Dynamical Equations of Two Rigid Bodies Colliding ............ 127
                   General Considerations ..................................... 127
                   The Local Kinematics ........................................ 129
                   The Gap Function ............................................ 132
                   The Two-Body System Dynamics ................................ 135
                   Dynamical Equations and Energy Loss
                   at Collision Times ........................................... 137
                   The Percussion Center ....................................... 142
### 6.2 Kinematic Multiple-Impact Law (Generalized Newton)
- 6.2.1 The Quasi-Lagrange Equations
- 6.2.2 The Kinetic Energy
- 6.2.3 The Contact Forces Power
- 6.2.4 Restitution Law for Frictionless Systems
- 6.2.5 Restitution Law with Tangential Effects
- 6.2.6 Tangential Restitution
- 6.2.7 Comments

### 6.3 Energetic-CoR Multiple-Impact Law
- 6.3.1 Presentation of the LZB Impact Dynamics
- 6.3.2 Applications and Validations
- 6.3.3 Comparison of Different Multiple Impact Mappings

### 6.4 Further Reading
- 6.4.1 Kinetic Restitution (Poisson)
- 6.4.2 Kinematic Restitution (Newton and Moreau)
- 6.4.3 Other Approaches

### 7 Stability of Nonsmooth Dynamical Systems
- 7.1 Stability of Measure Differential Equations
- 7.1.1 Stability of Impulsive ODEs
- 7.1.2 Stability of Measure Driven ODEs (MDEs)
- 7.1.3 Additional Comments and Studies
- 7.2 Stability of the Discrete Dynamic Equations
- 7.2.1 The Bouncing-Ball with Fixed Obstacle
- 7.2.2 Lyapunov Stability of Discrete-Time Systems
- 7.3 Impact Oscillators
- 7.3.1 Existence of Periodic Trajectories
- 7.3.2 Further Reading
- 7.3.3 Comments on the Poincaré Impact Map Stability
- 7.3.4 Other Studies on Stability
- 7.3.5 Bouncing-Ball with Moving Base
- 7.3.6 Additional Comments and Studies
- 7.4 Grazing or C-Bifurcations
- 7.4.1 The Stroboscopic Poincaré Map Discontinuities
- 7.4.2 The Stroboscopic Poincaré Map Around Grazing-Motions
- 7.4.3 Further Comments and Studies
- 7.5 Complementarity Lagrangian Systems: Stability
  - 7.5.1 The Dynamical System
  - 7.5.2 The Stability Analysis
  - 7.5.3 Dissipativity Properties
  - 7.5.4 Further Reading and Comments
7.5.5 Global Finite-Time Stability via the Zhuravlev-Ivanov Transformation

7.6 Stabilization of Impacting Systems: From Compliant to Rigid Models

7.6.1 System’s Dynamics

7.6.2 Lyapunov Stability Analysis

7.6.3 Analysis of Quadratic Stability Conditions for Large Stiffness Values

7.6.4 A Stiffness-Independent Convergence Analysis

7.7 Stability of Linear Complementarity Systems

7.8 Further Reading

8 Trajectory Tracking Feedback Control

8.1 Trajectory Tracking: Rigid-Joint Rigid-Body Systems

8.1.1 Basic Concepts

8.1.2 Controller Design

8.1.3 Tracking Control Framework

8.1.4 Design of the Desired Contact Force During Constraint Phases

8.1.5 Strategy for Takeoff at the End of Constraint Phases $\Omega^L_k$

8.1.6 Closed-Loop Stability Analysis

8.1.7 Illustrative Examples

8.1.8 Proof of Lemma 8.1

8.1.9 Proof of Theorem 8.1

8.2 Short Bibliography

8.3 Trajectory Tracking: Flexible-Joint Rigid-Link Systems

8.3.1 Basic Concepts

8.3.2 Tracking Control Framework

8.3.3 Desired Contact Force During Constraint Phases

8.3.4 Strategy for Takeoff at the End of Constraint Phases $\Omega^{H_k}_{2k+1}$

8.3.5 Closed-Loop Stability Analysis

8.3.6 Illustrative Example

8.3.7 Proof of Proposition 8.7

8.3.8 Proof of Lemma 8.2

8.3.9 Proof of Lemma 8.3

8.3.10 Proof of Theorem 8.2

8.4 A Unified Point of View

8.5 Further Results

8.5.1 Experimental Control of the Transition Phase

8.5.2 Juggling Robots Analysis and Control

8.5.3 Mechanisms with Joint Clearance

8.5.4 Observability and State Observers
Contents

Erratum to: Nonsmooth Mechanics ........................................... E1
Appendix A: Distributions, Measures, Functions of Bounded
Variations .......................................................... 535
Appendix B: Elements of Convex Analysis ............................... 547
References .............................................................................. 563
Index ...................................................................................... 619
Nonsmooth Mechanics
Models, Dynamics and Control
Brogliato, B.
