Part I Linking Water Management, Food Policy and Welfare

1	Contemporary Model for Water Management and Alternative Approaches	3
1.1	An Institutional Perspective on Water Availability and Its Scarcity	4
1.2	Water Management in Mexico and the Predominant Contemporary Model	5
1.3	The Potential of Water Footprint and Virtual Water Approaches for Institutional Strengthening on the Subject of Water in Mexico	7
	References	10
2	Socioeconomic Framework	13
2.1	Geographic and Demographic Characteristics	13
2.2	Economic Distribution of the Population	17
2.3	Conclusions	19
	References	19
3	Water Policy and Institutions	21
3.1	Water Legal Framework and Institutions	21
3.2	Water Policy	23
	Annex	26
	References	28
4	Water Use for Food Purposes	29
4.1	Agriculture, Agroindustry, and Water Use	29
4.2	Conclusions	33
	References	33

5	Water Resources Inventory and Implications of Irrigation Modernization	35
5.1	Water Resources Inventory and Infrastructure	35
5.2	Irrigation Systems	39
	References	43
6	Manifestations of Welfare Loss	45
6.1	Introductory Notes	45
6.2	Evolution of the Water Security Concept.	46
6.3	Widening Water Security Toward Environmental, Social, and Economic Security	47
6.4	Deepening Water Security in the Context of Human and Gender Security	49
6.5	Water Security as a Political and Military Security Issue	49
6.6	Conflicts and Hydro-Diplomacy	50
6.7	Water Security and Gender Equity	52
6.8	Concluding Notes: Toward a Comprehensive Understanding of Water Security	53
	References	55
7	Prices and Water: A Strategy with Limited Effectiveness	59
7.1	Introduction.	59
7.1.1	Contemporary Water Markets in Mexico: Their Institutional Origin	60
7.2	Contemporary Water Markets in Mexico and Some of Their Main Features	63
	References	71
 Part II Pressures on Water Availability, Its Use and Welfare Effects		
8	Water Use Pattern	75
8.1	Water Use	75
8.2	Degree of Stress on Agricultural Use	80
8.3	Conclusions.	83
	References	83
9	Change in the Dietary Pattern and Water Security	85
9.1	Food Sovereignty, Water Security, and Changes in the Dietary Pattern	85
9.1.1	The Debate on Food Security.	85
9.1.2	Food Sovereignty and Water Security	87
9.1.3	Changes in Dietary Patterns, Food Sovereignty, and Water Security	88

9.2	Virtual Water, Food Sovereignty, and Change in the Dietary Pattern in Mexico.	89
9.2.1	Characteristics of Food Consumption Changes in Mexico	89
9.2.2	Virtual Water of the Mexican Dietary Pattern.	91
9.3	Conclusions.	96
	References	96
10	Hydrological Stress and Pressures on Water Availability	99
10.1	How Much Water Does Mexico Have and Where Is It?	99
10.2	How Is Water Used in Mexico and Where?.	100
10.3	How Is Water Stressed in Mexico?.	102
10.4	What Conflicts Emerge from the Water Stress Level?	104
10.4.1	Water in the Colorado River	105
10.4.2	Water in Mexico City and Its Metropolitan Area	106
10.5	Conclusions.	108
	References	108
11	Problems Associated with Groundwater Management	111
11.1	Groundwater Resources.	111
11.2	Groundwater Concession.	114
11.3	Degree of Groundwater Stress	116
	References	119
12	Vulnerability and Climate Change	121
12.1	Introduction.	121
12.2	Considerations About Vulnerability and Climate Change.	122
12.3	Vulnerability and Water Footprint	124
12.4	An Approach to Latent Vulnerability with Water Footprint Instruments	126
12.4.1	Internal Water Footprint (IWFP).	126
12.4.2	External Water Footprint (EWFP).	126
12.4.3	Latent Vulnerability (LV)	127
12.4.4	Internal Latent Vulnerability (ILV)	127
12.4.5	External Latent Vulnerability (ELV)	127
	References	131
 Part III Methodology for Analyzing Water Footprint and Virtual Water		
13	Water Demand of Major Crops: A Methodology	135
13.1	Introduction.	135
13.2	Agro-ecological Zones and Water Availability	136
13.3	Methodology to Meet Crop Water Needs	137
13.4	Moisture Balance in the Soil	138
13.4.1	Soil Moisture Content.	138

13.4.2	Field Capacity	138
13.4.3	Permanent Wilting Point	139
13.4.4	Abatement of Available Moisture as an Irrigation Criterion	140
13.4.5	Water Consumption by Evapotranspiration.	140
13.4.6	Estimation of Evapotranspiration	140
13.4.7	Estimation of Effective Rainfall and Water Losses by Percolation	141
13.4.8	Computer Program	141
13.5	Conclusions.	150
	References	151
14	Gray Water Footprint and Water Pollution.	153
14.1	Introduction.	153
14.2	Hydrologic Basins	154
14.3	Water Pollution	154
14.4	Regulation and Assessment of Pollution in Water Bodies	155
14.5	Gray Water Footprint Definition.	156
14.6	Application Areas.	157
14.6.1	GWF of Reactive Contaminants	157
14.6.2	GWF Comparison by Different Land Uses in a Hydrologic Basin.	158
14.6.3	GWF Application to Describe Advantages and Disadvantages of Transfers Among Hydrological Basins.	159
14.6.4	GWF as Warning System of Pollution of Water Bodies	159
14.7	Conclusion	160
	References	160
15	Gray Footprint and Mining: Impact of Metal Extraction on Water.	163
15.1	Presentation.	163
15.2	Metal Extraction Activities	164
15.3	Gold Mining Contribution to National Economy	166
15.4	Mining Environmental Impact: Effects on Water Availability	169
15.5	Conclusions.	172
	Annex: Extraction Yields of Various Mining Products by Federal State	172
	References	175
16	Considerations on Virtual Water and Agri-food Trade	177
16.1	Virtual Water and Free Trade	177
16.2	Contemporary Agri-Food Regime in Mexico	179

16.3	Virtual Water in Agri-Food Trade Between Mexico and the United States	180
	References	184
 Part IV Applying the WF Approach for Impact Analysis on Sectors and Regions		
17	Water Footprint of Four Cereals in Irrigation District 011.	189
17.1	Characteristics and Importance of Irrigation District 011	
Alto Rio Lerma		189
17.2	Estimated Water Footprint of Four Cereals	193
17.2.1	Methodology	193
17.2.2	Results	193
17.2.3	Information Used and Its Sources	194
17.2.4	Results of ET and WF for DR011	195
17.3	Conclusions.	196
	References	197
18	Forage Water Footprint in the Comarca Lagunera	199
18.1	Status of the National Bovine Milk Production	199
18.2	Bovine Milk Production in the Comarca Lagunera	202
18.3	Water Footprint of Forage Production in the Comarca Lagunera.	203
18.3.1	Dairy Cattle Feeding.	204
18.3.2	Water Footprint (Blue Water) Estimate in Milk Production.	206
18.3.3	Water Footprint Expressed in Energy Consumption	209
	References	213
19	Water Footprint in Livestock	215
19.1	Livestock in Mexico.	215
19.1.1	Background	215
19.1.2	Livestock and Free Trade	216
19.1.3	Systems and Production Methods in Livestock	218
19.2	Water Footprint in Livestock.	219
19.2.1	Bovine	220
19.2.2	Swine	221
19.2.3	Poultry (Intensive Only)	222
19.3	Study Limitations.	222
19.4	Conclusions.	223
19.4.1	Green Water Footprint (GWF)	223
19.4.2	Bovine	225
19.4.3	Pig-Farming	225
19.4.4	Poultry Farming	225
19.4.5	Blue Water Footprints (BWF)	225

19.4.6	Pig-Farming	225
19.4.7	Farming of Laying Hens	226
19.4.8	Poultry Meat Production	226
19.4.9	Dairy Bovine	226
19.4.10	Total WF (TWF)	226
	References	226
20	Water Footprint of Bottled Drinks and Food Security	229
20.1	Introduction	229
20.2	Comments on Bottled Drinks Production in Mexico	230
20.3	The Bottling Industry and Its Relation with Water Footprint and Virtual Water.	234
	References	238

Water, Food and Welfare

Water Footprint as a Complementary Approach to
Water Management in Mexico

Pérez-Espejo, R.; Constantino-Toto, R.M.; Dávila-Ibáñez,
H.R. (Eds.)

2016, XVII, 252 p. 76 illus., 4 illus. in color., Softcover

ISBN: 978-3-319-28822-2
