1	Introduction	1
2	The Univariate Case	9
2.1	Stationary Solution	10
2.1.1	Existence and Uniqueness of the Stationary Solution	10
2.1.2	A Discussion of the Conditions of the Existence Results	14
2.1.3	Examples	17
2.2	The Markov Chain	19
2.2.1	Generalities	19
2.2.2	Mixing Properties	23
2.2.3	The Fixed-Point Equation	25
2.2.4	\otimes -Convolution	31
2.2.5	The Contractive Case	32
2.3	Moments	35
2.4	The Tails	41
2.4.1	Generalities	41
2.4.2	The Goldie-Grübel Theorem	41
2.4.3	The Grincevičius-Grey Theorem	43
2.4.4	The Kesten-Goldie Theorem	47
2.5	The Support	62
2.5.1	Preliminaries	62
2.5.2	The Support is Atomless	65
2.5.3	The Structure of the Support	66
2.5.4	Examples	74
3	Univariate Limit Theory	79
3.1	The Extremes	80
3.2	Convergence of Point Processes	91

- 3.3 Central Limit Theory for Partial Sums 108
 - 3.3.1 A Central Limit Theorem with Gaussian Limit 108
 - 3.3.2 Infinite-Variance Stable Limit Theory. 112
 - 3.3.3 The Nagaev–Guivarc’h Method. 119
- 3.4 Large Deviations 124
 - 3.4.1 The Independent Case 124
 - 3.4.2 The Kesten–Goldie Case 127
- 4 Multivariate Case 137**
 - 4.1 Stationary Solution 138
 - 4.1.1 Existence and Uniqueness of the Stationary Solution 138
 - 4.1.2 Stationarity of the GARCH Process 143
 - 4.2 The Markov Chain 151
 - 4.2.1 Generalities. 152
 - 4.2.2 Mixing Properties 155
 - 4.3 The Support 159
 - 4.4 Tails in the Multivariate Settings. 163
 - 4.4.1 Preliminaries on Regular Variation. 163
 - 4.4.2 General Scheme 166
 - 4.4.3 A Discussion of the Assumptions 167
 - 4.4.4 Nonnegative Matrices: Kesten’s Theorem 170
 - 4.4.5 Some Examples. 175
 - 4.4.6 Sketch of the Proof of Kesten’s Theorem 4.4.5 179
 - 4.4.7 Invertible (id) Matrices. 186
 - 4.4.8 Invertible (i-p) Matrices 188
 - 4.4.9 An Example: A Random Coefficient Autoregressive Model 189
 - 4.4.10 Some Special Matrices: Similarities and Dilations 192
 - 4.4.11 The Case of Heavy-Tailed Additive Noise 196
 - 4.5 Multidimensional Central Limit Theory 203
- 5 Miscellanea 221**
 - 5.1 The Critical Case $\mathbb{E}[\log A] = 0$ 222
 - 5.1.1 The Invariant Measure 223
 - 5.1.2 Further Asymptotic Properties. 228
 - 5.2 The Smoothing Transform 230
 - 5.2.1 Generalities. 230
 - 5.2.2 Examples 231
 - 5.2.3 The Homogeneous Smoothing Transform 233
 - 5.2.4 The Inhomogeneous Smoothing Transform 240
 - 5.3 Iterated-Function Systems. 247
 - 5.3.1 Examples 247
 - 5.3.2 Stationary Solution 249
 - 5.3.3 Tails 250
 - 5.3.4 Limit Theory. 252

5.4 Regularly Varying Sequences 254

 5.4.1 Point Process Convergence and Convergence
 of Extremes 257

 5.4.2 Infinite-Variance Stable Central Limit Theory 257

 5.4.3 Large Deviation Theory 258

 5.4.4 Ruin Probabilities 258

5.5 Super-Heavy Tails by PIOTR DYSZEWSKI 259

5.6 The Exceedance Times of a Perpetuity Sequence. 262

Appendix A: Renewal Theory 267

Appendix B: Univariate Regular Variation. 273

Appendix C: Multivariate Regular Variation 279

Appendix D: Some Properties of the Transition Operator
 $\mathbb{P}(A x + B \in \cdot)$ **Applied to Hölder Functions 287**

Appendix E: Some Results About Products of Random Matrices. 293

List of Abbreviations and Symbols. 297

Stochastic Models with Power-Law Tails

The Equation $X = AX + B$

Buraczewski, D.; Damek, E.; Mikosch, Th.

2016, XV, 320 p. 9 illus., 5 illus. in color., Hardcover

ISBN: 978-3-319-29678-4
