Part I Modes of Approximation

1	Contributions of Rabi Bhattacharya to the Central Limit Theory and Normal Approximation	3
	Peter Hall	
1.1	Rates of Convergence in the Central Limit Theorem	3
1.2	Asymptotic Expansions	5
1.3	Influence on Statistics	6
1.4	Past, Present, and Future	8
	References	10
2	Asymptotic Expansions for Stochastic Processes	15
	Nakahiro Yoshida	
2.1	Introduction	15
2.2	Refinements of Central Limit Theorems	16
2.2.1	Rate of Convergence of the Central Limit Theorem	16
2.2.2	Cramér-Edgeworth Expansion	17
2.2.3	Smoothing Inequality	18
2.2.4	Applications to Statistics	19
2.3	Asymptotic Expansion for Mixing Processes	19
2.4	Asymptotic Expansion for Martingales	21
2.4.1	Martingale Central Limit Theorems	21
2.4.2	Berry-Esseen Bounds	22
2.4.3	Asymptotic Expansion of Martingales	23
2.5	Non-ergodic Statistics and Asymptotic Expansion	24
2.5.1	Non-central Limit of Estimators in Non-ergodic Statistics	24
2.5.2	Non-ergodic Statistics and Martingale Expansion	25
	References	26
3	An Introduction to Normal Approximation	33
	Qi-Man Shao	
3.1	Introduction	33
3.2	Asymptotic Expansions	33
3.3	Normal Approximation by Stein's Method	36
3.4	Strong Gaussian Approximation	37
	References	39

4	Reprints: Part I	41
	R.N. Bhattacharya and Coauthors	
4.1	“Berry-Essen bounds for the multi-dimensional central limit theorem”	42
4.2	“Rates of weak convergence and asymptotic expansions for classical central limit theorems”	46
4.3	“On errors of normal approximation”	66
4.4	“Refinements of the multidimensional central limit theorem and applications”	81
4.5	“On the validity of the formal Edgeworth expansion”	109

Part II Large Time Asymptotics for Markov Processes I: Diffusion

5	Martingale Methods for the Central Limit Theorem	131
	S.R. Srinisava Varadhan	
5.1	Introduction	131
5.2	Methods for Proving the CLT	131
5.3	A Bit of History	134
	References	135
6	Ergodicity and Central Limit Theorems for Markov Processes	137
	Thomas G. Kurtz	
6.1	Introduction	137
6.2	Ergodicity for Markov Processes	140
	6.2.1 Harris Recurrence	145
	6.2.2 Conditions without Harris Recurrence	148
6.3	Central Limit Theorems	149
	References	153
7	Reprints: Part II	155
	R.N. Bhattacharya and Coauthors	
7.1	“Criteria for recurrence and existence of invariant measures for multidimensional diffusions”	156
7.2	“On the functional central limit theorem and the law of the iterated logarithm for Markov processes”	170
7.3	“A central limit theorem for diffusions with periodic coefficients”	188
7.4	“Refinements of the multidimensional central limit theorem and applications”	201
7.5	“Stability in distribution for a class of singular diffusions”	219
7.6	“Speed of convergence to equilibrium and to normality for diffusions with multiple periodic scales”	230

Part III Large Time Asymptotics for Markov Processes II: Dynamical Systems and Iterated Maps

8	Dynamical Systems, IID Random Iterations, and Markov Chains	265
	Krishna B. Athreya	
8.1	Dynamical Systems	265
8.2	IID Random Iterations	267
	8.2.1 Examples	267
	8.2.2 A Basic Convergence Theorem	269

8.3	Markov Chains	271
	References	274
9	Random Dynamical Systems and Selected Works of Rabi Bhattacharya	277
	Edward C. Waymire	
9.1	Introduction and Preliminaries	277
9.2	A Splitting Theorem	280
9.3	Related Results and Applications	281
9.4	Fluctuation Laws and Limit Theorems	283
9.5	Other Approaches, Problems, and Directions	284
9.6	Concluding Remarks	286
	References	286
10	Reprints: Part III	289
	R.N. Bhattacharya and Coauthors	
10.1	“Asymptotics of a class of Markov processes which are not in general irreducible”	290
10.2	“Random iterations of two quadratic maps”	306
10.3	“On a theorem of Dubins and Freedman”	317
10.4	“An approach to the existence of unique invariant probabilities for Markov processes”	339
Part IV Stochastic Foundations in Applied Sciences I: Economics		
11	Stability Analysis for Random Dynamical Systems in Economics	363
	Takashi Kamihigashi and John Stachurski	
11.1	Introduction	363
11.2	Basic Economic Models	365
	11.2.1 Optimal Growth	365
	11.2.2 Stability Arguments	366
	11.2.3 Overlapping Generations	367
	11.2.4 Other Applications	368
11.3	Stability Conditions	368
	11.3.1 Splitting	368
	11.3.2 Monotone Mixing	369
	11.3.3 Order Mixing	370
	11.3.4 Order Reversing	371
11.4	Conclusion	372
	References	372
12	Some Economic Applications of Recent Advances in Random Dynamical Systems	375
	Santanu Roy	
12.1	Introduction	375
12.2	A Simple Economic Model of Capital Accumulation under Uncertainty	376
12.3	Long Run Behavior of the Economic System	379
	References	382

13 Reprints: Part IV	385
R.N. Bhattacharya and Coauthors	
13.1 “Dynamical systems subject to random shocks: an introduction” ..	386
13.2 “Random iterates of monotone maps”	399
 Part V Stochastic Foundations in Applied Sciences II: Geophysics	
14 Advection-Dispersion in Fluid Media and Selected Works of Rabi Bhattacharya	411
Enrique A. Thomann and Edward C. Waymire	
14.1 Introduction	411
14.2 Brownian Motion in Porous Media and Taylor-Aris Dispersion ..	415
14.3 Multiscale Dispersion	417
14.4 Discontinuous Coefficients and Skew Dispersion	419
14.5 Concluding Remarks	420
References	421
15 Cascade Representations for the Navier–Stokes Equations	425
Franco Flandoli and Marco Romito	
15.1 Introduction	425
15.2 Fourier Formulation of the Navier–Stokes Equations	426
15.3 Picard Iteration and Deterministic Cascade Representation	428
15.4 Stochastic Cascade and Majorizing Kernels	429
15.4.1 The Stochastic Cascade of Le Jan and Sznitman	429
15.4.2 Majorizing Kernels	431
15.5 Pruning the Trees	432
15.5.1 The Comparison Equation	432
15.5.2 Pruning the Tree	433
References	434
16 Reprints: Part V	437
R.N. Bhattacharya and Coauthors	
16.1 “On a statistical theory of solute transport in porous media”	438
16.2 “On the Taylor-Aris theory of solute transport in a capillary”	453
16.3 “Asymptotics of solute dispersion in periodic porous media”	461
16.4 “Multiscale diffusion processes with periodic coefficients and an application to solute transport in porous media”	475
16.5 “Majorizing kernel and stochastic cascades with application to incompressible Navier Stokes equations”	546
 Part VI Stochastic Foundations in Applied Sciences III: Statistics	
17 Nonparametric Statistical Methods on Manifolds	587
Ian L. Dryden, Huiling Le, Simon P. Preston, and Andrew T.A. Wood	
17.1 Bootstrap Methods	587
17.2 Curve Fitting	591
References	596

18 Nonparametric Statistics on Manifolds and Beyond 599
 Stephan Huckemann and Thomas Hotz

18.1 Before “Large Sample Theory of Intrinsic and Extrinsic Sample Means on Manifolds” 599

18.2 “Large Sample Theory of Intrinsic and Extrinsic Sample Means on Manifolds” 601

18.3 Beyond “Large Sample Theory of Intrinsic and Extrinsic Sample Means on Manifolds” 603

18.4 Conclusion 605

References 605

19 Reprints: Part VI 611
 R.R. Bhattacharya and Coauthors
