

Contents

1	Introduction	1
1.1	A Brief Introduction on Railway Operations	1
1.2	Book Outline	4
	References	5
2	Background: Train Operations and Scheduling	7
2.1	Operation of Trains	7
2.1.1	Automatic Train Operation	7
2.1.2	Principles of Signaling Systems	9
2.2	Optimal Trajectory Planning of Trains	11
2.2.1	Optimal Trajectory Planning of a Single Train	12
2.2.2	Optimal Trajectory Planning of Multiple Trains	13
2.3	Urban Rail Transit Scheduling Process	14
2.3.1	Passenger Demand	15
2.3.2	Train Scheduling	15
2.4	Summary	18
	References	18
3	Optimal Trajectory Planning for a Single Train	23
3.1	Introduction	23
3.2	Model Formulation	24
3.2.1	Train Model	24
3.2.2	An Assumption About the Line Resistance	26
3.3	Mathematical Formulation of the Single Train Trajectory Planning Problem	27
3.4	Solution Approaches	30
3.4.1	Pseudospectral Method	30
3.4.2	Mixed Integer Linear Programming	33

3.5	Case Study	41
3.5.1	Set-Up	41
3.5.2	Results and Discussion	44
3.6	Summary	48
	References	50
4	Optimal Trajectory Planning for Multiple Trains	53
4.1	Introduction	53
4.2	Model Formulation	54
4.2.1	Train Dynamics	54
4.2.2	Operation of Trains in a Fixed Block Signaling System	55
4.2.3	Operation of Trains in a Moving Block Signaling System	57
4.3	Mathematical Formulation of the Multiple Trains Trajectory Planning Problem	59
4.4	Solution Approaches	60
4.4.1	Greedy Approach	60
4.4.2	Simultaneous Approach	61
4.5	Mixed Logical Dynamic Formulation for Signaling System Constraints	62
4.5.1	Multiple Trains Under Fixed Block Signaling System	62
4.5.2	Multiple Trains Under Moving Block Signaling System	65
4.5.3	Extension: Mode Vector Constraints	67
4.6	Case Study	68
4.6.1	Set-Up	68
4.6.2	Results for the Fixed Block Signaling System	71
4.6.3	Results for the Moving Block Signaling System	75
4.6.4	Discussion	78
4.7	Summary	78
	References	79
5	OD-Independent Train Scheduling for an Urban Rail Transit Line	81
5.1	Introduction	81
5.2	Model Formulation	82
5.2.1	Arrivals and Departures	83
5.2.2	Passenger Demand Characteristics	85
5.2.3	Passenger and Vehicle Interaction	86
5.3	Mathematical Formulation of the Train Scheduling Problem	87
5.4	Solution Approaches	89
5.4.1	Gradient-Free Nonlinear Programming	89
5.4.2	Gradient-Based Nonlinear Programming	90
5.4.3	Mixed Integer Nonlinear Programming	90

5.4.4	Mixed Integer Linear Programming	91
5.4.5	A New Approach: Iterative Convex Programming	92
5.5	Extension: Stop-Skipping at Small Stations	93
5.6	Case Study	95
5.6.1	Setup	95
5.6.2	Results and Discussion	99
5.7	Summary	106
	References	106
6	OD-Dependent Train Scheduling for an Urban Rail Transit Line	109
6.1	Introduction	109
6.2	Model Formulation	110
6.2.1	Arrivals and Departures with Stop-Skipping	112
6.2.2	OD-Dependent Passenger Demand Characteristics	114
6.3	Mathematical Formulation of the Scheduling Problem	117
6.4	Solution Approaches	119
6.4.1	Bi-Level Optimization Approach	119
6.4.2	Limited Bi-Level Optimization Approach	120
6.5	Case Study	122
6.5.1	Setup	122
6.5.2	Results and Discussion	124
6.6	Summary	133
	References	134
7	OD-Dependent Train Scheduling for an Urban Rail Transit Network	135
7.1	Introduction	135
7.2	Model Formulation	136
7.2.1	Three Types of Events	137
7.2.2	Event-Driven Dynamics	142
7.3	Mathematical Formulation for the Scheduling Problem	147
7.3.1	Performance Criteria	147
7.3.2	Constraints	148
7.4	Rolling Horizon Approach and Initial Conditions	149
7.5	Solution Approaches	150
7.6	Case Study	151
7.6.1	Setup	151
7.6.2	Results and Discussion	155
7.7	Summary	159
	References	159
8	Overview and Future Directions	161

Appendix A: A General Formulation of the Pseudospectral Method	163
Appendix B: Background—Optimization.	167
Index	179
