Part II Evolution of Neuropsychological Assessment

3 Neuropsychological Assessment 1.0 ........................................ 31
   1 Historical Development of Neuropsychological Assessment 1.0 .................................. 31
   2 Neuropsychology’s Prehistory ........................................ 32
      2.1 Diagram-Makers and Nineteenth-Century Medicine ............... 33
   3 Neuropsychological Assessment and Localization ..................... 34
      3.1 Kurt Goldstein: A Holistic Approach to Neuropsychology .......... 34
      3.2 Lev Vygotsky and Alexander Luria: Russian Neuropsychology .......... 36
      3.3 Physiological and Comparative Psychology (Twentieth Century) ...... 37
      3.4 Summary .................................................. 39
   4 Development of the Quantitative Test Battery .......................... 40
      4.1 Alfred Binet and Psychometric Assessment of Intellectual Ability .......... 40
      4.2 David Weschler: World Wars and Weschler Scales ................. 40
   5 Ward Halstead: Establishment of the Fixed Battery Neuropsychological Battery. ................. 42
   6 Contemporary Development of the Flexible Test Battery ............... 43
      6.1 Arthur Benton: Iowa-Benton Flexible Battery Approach ............ 43
      6.2 Edith Kaplan: Boston Process Approach ............................ 44
   7 Conclusions .................................................. 44
   8 Changing Roles and Tools in Neuropsychological Assessment 1.0 ............ 46

4 Neuropsychological Assessment 2.0: Computer-Automated Assessments ........................................ 47
   1 Historical Development of Computerized Assessments ................. 50
      1.1 Early Attempts at Automation .................................... 50
      1.2 Computer Automations of Paper-and-Pencil Tests ................. 51
      1.3 Computer Scoring of Paper-and-Pencil Tests ..................... 52
   2 Application Areas of Computerized Assessments ........................ 53
      2.1 Computer-Automated Batteries for Return-to-Capacity Decisions ......... 53
      2.2 Computer-Automated Neuropsychological Assessment with Specific Patient Populations ......... 55
Contents

3 “Common Currency” Assessment Batteries 59
   3.1 Penn Computerized Neurocognitive Battery 59
   3.2 NIH Toolbox 60
   3.3 NIH Executive Abilities: Methods and Instruments for Neurobehavioral Evaluation and Research (EXAMINER) 61

4 What About Ecologically Valid Computer-Based Assessments? 61

5 Neuropsychological Assessment 3.0 65
   1 What Constitutes an Ecologically Valid Assessment of Cognitive Functioning 66
      1.1 Construct-Driven Versus Function-Led Assessments 66
      1.2 Importance of Affective States for Cognitive Processing 68
   2 Construct-Driven Virtual Environments 69
      2.1 Virtual Reality Versions of the Wisconsin Card Sorting Test 69
      2.2 Virtual Classroom for Assessment of Attention 70
      2.3 Virtual Apartment for Assessment of Attention 74
      2.4 Construct-Driven Driving Simulations 74
   3 Need for Function-Led Assessments 75
      3.1 Multiple Errands Paradigm for Function-Led Assessments 76
      3.2 Driving Simulator Paradigm for Function-Led Assessments 83
   4 Virtual Environments for Assessment of Memory 86
      4.1 Virtual Environments for Episodic Memory in Complex Conditions 87
      4.2 Active Versus Passive Navigation 88
      4.3 Prospective Memory 89
   5 Enhanced Ecological Validity via Virtual Environments for Affective Assessments 91
      5.1 Virtual Environments for Studies of Fear Conditioning 91
      5.2 Virtual Environments to Elicit Affective Responses in Threatening Contexts 92
   6 Conclusions 95

Part III Next Generation Neuropsychological Applications

6 Telemedicine, Mobile, and Internet-Based Neurocognitive Assessment 99
   1 Video Teleconferencing for Teleneuropsychological Assessment 100
      1.1 Mini Mental State Examination via Remote Administration 101
1.2 Neuropsychological Batteries via Video Teleconferencing .......................... 102
1.3 Gerontology Applications of Videoconference-Based Assessment ..................... 103
1.4 Language Assessments ........................................................................... 104
1.5 Acceptability of Neuropsychological Screening Delivered via Telehealth ............. 104

2 Smartphones for Telephone-Based Neuropsychological Assessment .................... 105

3 Ecological Momentary Assessments .................................................................. 106

4 Web-Based Computerized Assessments ............................................................. 107

5 Summary and Conclusions ........................................................................... 110

7 Neuropsychological Rehabilitation 3.0: State of the Science ............................... 113
1 Introduction ................................................................................................. 113
2 History of Rehabilitation in Neuropsychology .................................................. 114
3 Neuropsychological Rehabilitation 2.0 ........................................................... 116
4 Electronic Devices for Cognitive Aids ............................................................. 117
5 Computerized Skills Training Software ......................................................... 117
6 Computerized Attention Training Programs ................................................... 118
7 Computer-Based Cognitive Rehabilitation for Brain Injury .............................. 118
8 Neuropsychological Rehabilitation 3.0 ........................................................... 119
8.1 Brain–Computer Interfaces for Rehabilitation .............................................. 129
8.2 Challenges in Technology Application ......................................................... 130
8.3 Summary ................................................................................................. 131

Part IV Conclusions

8 Future Prospects for a Computational Neuropsychology .................................. 135
1 Formal Definitions of Neuropsychological Concepts and Tasks in Cognitive Ontologies .................................................................................................................. 136
1.1 Covariance Among Neuropsychology Measures of Differing Domains .............. 136
1.2 Lack of Back-Compatibility in Traditional Print Publishing .............................. 136
1.3 Neuropsychology’s Need for Cognitive Ontologies ....................................... 137
2 Web 2.0 and Collaborative Neuropsychological Knowledgebases ................... 138
3 Construct-Driven and Function-Led Redux ....................................................... 140
3.1 Virtual Environments for Assessing Polymorphisms ...................................... 141
3.2 Neuropsychological Assessment Using the Internet and Metaverse Platforms . 142
