Contents

1 Introduction: What Is Semiotics and Why Is It Important for Mathematics Education......................... 1
  1.1 The Role of Visualization in Semiosis .................. 2
  1.2 Purpose of the Topical Survey on Semiotics in Mathematics Education ................................. 3

2 Semiotics in Theory and Practice in Mathematics Education ...... 5
  2.1 A Summary of Influential Semiotic Theories and Applications .... 5
    2.1.1 Saussure ........................................ 5
    2.1.2 Peirce ............................................ 7
    2.1.3 Vygotsky .......................................... 10
  2.2 Further Applications of Semiotics in Mathematics Education .... 15
  2.3 The Significance of Various Types of Signs in Mathematics Education ..................................... 22
    2.3.1 Embodiment, Gestures, and the Body in Mathematics Education .................................... 22
    2.3.2 Linguistic Theories and Their Relevance in Mathematics Education ............................. 24
  2.4 Other Dimensions of Semiotics in Mathematics Education ...... 26
    2.4.1 The Relationship Among Sign Systems and Translation ........................................... 26
    2.4.2 Semiotics and Intersubjectivity ........................................ 28
    2.4.3 Semiotics as the Focus of Innovative Learning and Teaching Materials ........................ 28

3 A Summary of Results ........................................... 31

References ......................................................... 33
