Contents

1 Introduction .................................................. 1
  1.1 Objective, Task, and Significance ....................... 1
  1.2 Current Status of Research and Technology in Related Fields . . . . 2
    1.2.1 Current Status of Research on the Technology
          of Comprehensive Utilization of Water Resources . . . . . . 2
    1.2.2 Current Status of the Theory and Technology
          of Water Resources Assessment .......................... 4
    1.2.3 Current Status of Research on Mine Seepage Theory
          and Numerical Simulation ............................... 9
    1.2.4 Current Status of Research on the Theory and
          Technology of Rational Allocation of Water Resources . . 11
    1.2.5 Current Status of the Research on Water Resources
          Protection in Mining Areas ............................ 17
    1.2.6 Application of New Technology in the Study
          of Hydrology and Water Resources ........................ 18
  1.3 General Thinking, Content, and Technical Route of the Study . . . . . 20
    1.3.1 General Thinking ................................. 20
    1.3.2 Major Content ................................. 21
    1.3.3 Technical Route ................................. 24
  References .................................................... 25

2 Analysis of Supply and Demand of Water Resources
  in the Study Area ........................................... 29
  2.1 Assessment of Surface Water Resources .................. 29
    2.1.1 Surface Water Bodies in the Study Area ............ 29
    2.1.2 Runoff Volume of Ulan Mulun River ................. 30
    2.1.3 Resources of Surface Water Bodies .................. 32
    2.1.4 Total Surface Water Resources ....................... 35
2.2 Assessment of Groundwater Resources ........................................ 37
  2.2.1 Influence of Different Precipitation on the Recharge of Groundwater Resources ........................................ 37
  2.2.2 Assessment of Regional Groundwater Resources ................. 46
2.3 Total Water Resources ..................................................... 57
2.4 Current Status of Water Resources Development and Utilization ......................................................... 57
  2.4.1 Current Status of Water Supply Engineering .................. 57
  2.4.2 Current Status of Water Supply .................................. 58
  2.4.3 Current Status of Water Consumption ......................... 59
  2.4.4 Analysis of the Current Status of Supply—Demand Balance of Water Resources ........................................ 61
2.5 Prediction of Future Water Demand ...................................... 63
  2.5.1 Water Demand Prediction Based on GM (1, 1) Model ........ 63
  2.5.2 Prediction of Water Demand ....................................... 69
  2.5.3 Planning of Water Supply Engineering .......................... 70
  2.5.4 Analysis of Future Water Supply and Demand Balance .......... 75
2.6 Prediction of Mine Inflow ................................................ 78
  2.6.1 Current Status of Mine Inflow in Different Mines of the Study Area ......................................................... 78
  2.6.2 Current Status of Water Filling in Gob of Different Mines in the Study Area ............................................. 79
  2.6.3 Basis of Prediction .................................................. 81
  2.6.4 Prediction of Mine Water Inflow ................................ 83
2.7 Summary ................................................................. 88
References ................................................................. 91

3 Groundwater System in the Study Area .................................. 93
  3.1 Generalities of Groundwater System ................................ 93
    3.1.1 Concept of Groundwater System ............................. 93
    3.1.2 Characteristics of Groundwater System ................. 95
    3.1.3 Theoretic Basis for Water Resources Assessment of Groundwater System ............................................. 96
  3.2 Analysis of Groundwater System and Hydrogeological Conditions .......................................................... 98
    3.2.1 Generalities of Aquifer System Conditions ............ 98
    3.2.2 Hydrogeological Characteristics of Major Water Source Sites .................................................. 103
    3.2.3 Division and Major Hydrogeological Characteristics of Ground Water System .............................. 107
  3.3 Summary ................................................................. 112
References ................................................................. 113
4 Simulation, Assessment, and Management of the Key Water Source Sites .......................................... 115
  4.1 Simulation of the Key Water Source Sites of Groundwater System ........................................... 115
    4.1.1 Generalization of Hydrogeological Conditions .............................................................. 116
    4.1.2 Generalization of Mathemetic Model .................................................................................. 117
    4.1.3 Definite Condition .............................................................................................................. 118
    4.1.4 Parameter Inversion .......................................................................................................... 124
    4.1.5 Results and Analysis of Running Model ............................................................................ 132
  4.2 Feasibility Assessment of Joint Extraction of Groundwater from Wells and Springs .................. 135
    4.2.1 Groundwater Management Model ..................................................................................... 136
    4.2.2 Setup of the Optimized Management Model of Conjoint Groundwater Extraction from Wells and Springs ......................................................................................................................... 138
    4.2.3 Resolving and Analysis of the Optimized Management Model of Conjoint Groundwater Extraction from Wells and Springs ................................................................. 142
  4.3 Summary ..................................................................................................................................... 146
  References ......................................................................................................................................... 146

5 Assessment of Coal Mining Impact on Water Resources ................................................................. 149
  5.1 The Impact of Coal Mining on Water Resources Circulation ...................................................... 149
    5.1.1 Change of the Transformation Relation Between Surface Water and Groundwater ...... 149
    5.1.2 Acceleration of the Infiltration Rate of Rainfall and Surface Water, Reduction of Evaporation . 151
    5.1.3 Mine Drainage Makes Water Circulation Complicated ...................................................... 151
  5.2 Impact of Coal Mining on the Structure of Aquifer in Seam Roof .............................................. 152
  5.3 Impact of Coal Mining on Surface Water ..................................................................................... 153
    5.3.1 Impact of Coal Mining on Surface Water System .............................................................. 153
    5.3.2 Impact of Coal Mining on Surface Water Quality .............................................................. 155
  5.4 Impact of Coal Mining on Groundwater ...................................................................................... 155
    5.4.1 Relationship Between the Drop of Groundwater Level and Destruction of Overburden Rocks . 156
    5.4.2 Impact of Coal Mining on Water Level of the Major Aquifer ............................................. 157
    5.4.3 Impact of Coal Mining on Groundwater Flow Field ........................................................... 159
    5.4.4 Impact of Coal Mining on Groundwater Quality ............................................................... 163
  5.5 Impact of Coal Mining on Water Resources Quantity ............................................................... 164
    5.5.1 Impact of Coal Mining on the Total Water Resources ...................................................... 164
    5.5.2 Groundwater Drawdown Induced by Coal Mining Reduced the Output of Springs .............. 165
5.5.3 Impact of Coal Mining on the Available Water Resources ........................................... 166

5.6 Summary .......................................................................................................................... 168

References .............................................................................................................................. 168

6 Study on MultiObjective Optional Allocation of Complex Water Resources System .................. 171

6.1 Generalities of the MultiObjective Optimal Allocation Model of Water Resources .................. 171
   6.1.1 Mathematical Model .................................................................................................... 171
   6.1.2 Decision Variables ..................................................................................................... 172
   6.1.3 Objective Function ..................................................................................................... 173
   6.1.4 Constraint Conditions ............................................................................................... 174

6.2 Setup of the Optimal Allocation Model of Complex Water Resources System in the Study Area .......... 175
   6.2.1 Principle for Model Setup ............................................................................................. 176
   6.2.2 Selection of Decision Variables ................................................................................... 177
   6.2.3 Setup of Objective Function and Objective Constraint .............................................. 178
   6.2.4 Determination of the Constraint Conditions ............................................................... 180

6.3 Solution Method of Model .................................................................................................. 182

6.4 Results and Analysis of Running Model ............................................................................ 185
   6.4.1 Analysis of Water Resources Optimization Results in Daliuta Shaft District ................. 189
   6.4.2 Analysis of the Optimization Results of Water Resources in Bulianta Mine ................ 192
   6.4.3 Analysis of the Optimization Results of Water Resources in Shangwan Mining Area .......... 195
   6.4.4 Analysis of the Optimization Results of Water Resources of the Coal Feeding System for Coal
       Liquification ....................................................................................................................... 197
   6.4.5 Analysis of the Optimization Results of the Water Resources in Halagou Mining Area .... 200
   6.4.6 Analysis of the Optimization Results of the Water Resources in Ulan Mulun Mining Area .... 202
   6.4.7 Analysis of the Optimization Results of the Water Resources in Shigetai Mining Area .......... 205
   6.4.8 Analysis of the Optimization Results of the Water Resources in Huojitu Shaft District .... 208
   6.4.9 Comprehensive Analysis on the Water Resources Optimization Results in the Study Area .... 210

6.5 Summary .......................................................................................................................... 215

References .............................................................................................................................. 217
7 Patterns of Rational Development and Utilization of Water Resources in the Study Area ............................................. 219
  7.1 Problems of Mine Water as Usable Resources and Study of Countermeasure. .............................................. 220
  7.2 Analysis of Water Resource Development and Utilization Potential ................................................................. 222
    7.2.1 Analysis of Water Supply Potential of Water Supplying Projects .......................................................... 222
    7.2.2 Analysis of the Internal Water Resources Development and Utilization Potential in the Study Area .......... 223
    7.2.3 Analysis of the Development and Utilization Potential of the Exterior Water Resources of the Study Area .... 227
  7.3 Study on the Water Resources Development and Utilization in the Study Area ................................................. 230
    7.3.1 Development and Utilization Mode of Water Resources ........................................................................ 230
    7.3.2 Scheme of Water Resources Development and Utilization ................................................................. 232
  7.4 Summary ......................................................................................................................................................... 241

8 Conclusion and Suggestions ........................................... 243
  8.1 Major Conclusions ................................................................. 243
    8.1.1 Analysis of the Characteristics of the Water Resources System, Supply, and Demand in the Mining Area ........ 243
    8.1.2 Optimal Allocation and Comprehensive Utilization of Complex Water Resources System ......................... 246
  8.2 Major Innovative Achievements .............................................. 250
    8.2.1 There Are Distinct Features at the Following Aspects ........................................................................ 251
  8.3 Suggestions ....................................................................................................................................................... 252
Study on the Optimal Allocation of Water Resources
Systems and the Comprehensive Utilization of Water
Resources in Arid-Semiarid Multiple Mining Areas
Dong, S.
2016, XV, 252 p. 62 illus., 49 illus. in color., Hardcover
