Contents

1 Nonuniversality in Computation: Fifteen Misconceptions
   Rectified ................................................................. 1
   Selim G. Akl

2 What Is Computable? What Is Feasibly Computable?
   A Physicist’s Viewpoint ........................................... 31
   Vladik Kreinovich and Olga Kosheleva

3 The Ideal Energy of Classical Lattice Dynamics ................. 59
   Norman Margolus

4 An Analogue-Digital Model of Computation:
   Turing Machines with Physical Oracles ....................... 73
   Tânia Ambaram, Edwin Beggs, José Félix Costa, Diogo Poças
   and John V. Tucker

5 Physical and Formal Aspects of Computation: Exploiting
   Physics for Computation and Exploiting Computation
   for Physical Purposes.................................................. 117
   Bruce J. MacLennan

6 Computing in Perfect Euclidean Frameworks .................. 141
   Jérôme Durand-Lose

7 Unconventional Computers and Unconventional
   Complexity Measures .............................................. 165
   Ed Blakey

8 Decreasing Complexity in Inductive Computations ............... 183
   Mark Burgin

9 Asymptotic Intrinsic Universality and Natural
   Reprogrammability by Behavioural Emulation .................. 205
   Hector Zenil and Jürgen Riedel
10 Two Small Universal Reversible Turing Machines ................. 221
Kenichi Morita

11 Percolation Transition and Related Phenomena in Terms of Grossone Infinity Computations ............................ 239
Dmitry I. Iudin and Yaroslav D. Sergeyev

12 Spacetime Computing: Towards Algorithmic Causal Sets with Special-Relativistic Properties .................... 267
Tommaso Bolognesi

13 Interaction-Based Programming in MGS ....................... 305
Antoine Spicher and Jean-Louis Giavitto

14 Cellular Automata in Hyperbolic Spaces ....................... 343
Maurice Margenstern

15 A Computation in a Cellular Automaton Collider Rule 110 . . . . . . 391
Genaro J. Martinez, Andrew Adamatzky and Harold V. McIntosh

16 Quantum Queries Associated with Equi-partitioning of States and Multipartite Relational Encoding Across Space-Time . . . . . 429
Karl Svozil

17 Solving the Broadcast Time Problem Using a D-wave Quantum Computer ....................................................... 439
Cristian S. Calude and Michael J. Dinneen

18 The Group Zoo of Classical Reversible Computing and Quantum Computing .............................................. 455
Alexis De Vos and Stijn De Baerdemacker

19 Fault Models in Reversible and Quantum Circuits .............. 475
Martin Lukac, Michitaka Kameyama, Marek Perkowski, Pawel Kerntopf and Claudio Moraga

20 A Class of Non-optimum-time FSSP Algorithms ................ 495
Hiroshi Umeo

21 Universality of Asynchronous Circuits Composed of Locally Reversible Elements ....................................... 523
Jia Lee

22 Reservoir Computing as a Model for In-Materio Computing ...... 533
Matthew Dale, Julian F. Miller and Susan Stepney

23 On Reservoir Computing: From Mathematical Foundations to Unconventional Applications ............................ 573
Zoran Konkoli
24 Computational Properties of Cell Regulatory Pathways Through Petri Nets ........................................ 609
Paolo Dini

25 Kernel P Systems and Stochastic P Systems for Modelling and Formal Verification of Genetic Logic Gates .............. 661
Marian Gheorghe, Savas Konur and Florentin Ipate

26 On Improving the Expressive Power of Chemical Computation .................................................. 677
Erik Bergh and Zoran Konkoli

27 Conventional and Unconventional Approaches to Swarm Logic .................................................. 711
Andrew Schumann

28 On the Inverse Pattern Recognition Problem in the Context of the Time-Series Data Processing with Memristor Networks . . . . . . . . . . 735
Christopher Bennett, Aldo Jesorka, Göran Wendin and Zoran Konkoli

29 Self-Awareness in Digital Systems: Augmenting Self-Modification with Introspection to Create Adaptive, Responsive Circuitry ............ 759
Nicholas J. Macias and Lisa J.K. Durbeck

30 Looking for Computers in the Biological Cell. After Twenty Years .................................................. 805
Gheorghe Păun

31 Unconventional Computing: A Brief Subjective History ................. 855
Cristian S. Calude

Index ................................................................. 865
Advances in Unconventional Computing
Volume 1: Theory
Adamatzky, A. (Ed.)
2017, IX, 874 p. 367 illus., 209 illus. in color., Hardcover
ISBN: 978-3-319-33923-8
