Cognitive HRI for Human Mobility Assistance

4.1 Interaction Strategy Applied in Smart Walker

4.2 Multimodal-Interaction Platform

4.2.1 Leg Detection Module

4.2.2 Human Hip and Walker Orientation

4.2.3 Sensor Readings During Walker-Assisted Gait

4.3 Human-Walker Parameters Detection

4.3.1 Calibration of LRF Sensor

4.3.2 Adaptive Estimation of Gait Components

4.3.3 Gait Cadence Estimation

4.3.4 Control Parameters Estimation

4.4 Experimental Study

4.5 Results and Discussion

4.5.1 Experiment Performing a Straight Path

4.5.2 Angular Parameter Evaluation

4.5.3 Walker Control System Evaluation

4.6 Chapter Conclusions

References

Multimodal Interface for Human Mobility Assistance

5.1 Integration of an Upper-Limb Interaction Forces System in the Walker Platform

5.2 Multimodal Interaction Strategy

5.2.1 Multimodal Interface for the Estimation of Human-Walker Interaction Parameters

5.2.2 Evaluation of Human Movement Intention Parameters

5.3 Strategies for Forces Interaction Control in Robotic Walkers

5.4 Example of a Controller Based on pHRI + cHRI

5.4.1 Control Implementation

5.4.2 Controller Evaluation

5.5 Conclusions
