1	Introduction	1
	Arthur Pecher and Jens Peter Kofoed	
1.1	Introduction.	1
1.2	The Successful Product Innovation.	2
1.3	Sketching WECs and Their Environment	3
1.4	Rules of Thumb for Wave Energy	5
	1.4.1 The Essential Features of a WEC	5
	1.4.2 Economic Rules of Thumb	6
	1.4.3 WEC Design Rules of Thumb.	9
	1.4.4 Power Take-Off Rules of Thumb.	12
	1.4.5 Environmental Rules of Thumb.	13
	References	14
2	The Wave Energy Sector	17
	Jens Peter Kofoed	
2.1	Introduction.	17
2.2	Potential of Wave Energy	19
2.3	Wave Energy Converters	22
	2.3.1 History.	22
	2.3.2 Categorization of WEC's	23
	2.3.3 Examples of Various WEC Types	24
	2.3.4 The Development of WECs	37
2.4	Test Sites	39
	References	41
3	The Wave Energy Resource	43
	Matt Folley	
3.1	Introduction to Ocean Waves.	43
	3.1.1 Origin of Ocean Waves	43
	3.1.2 Overview of the Global Wave Energy Resource	45

3.2	Water Wave Mechanics	46
3.2.1	Definition and Symbols	46
3.2.2	Dispersion Relationship	47
3.2.3	Water Particle Path and Wave Motions	48
3.3	Characterisation of Ocean Waves and the Wave Climate.	50
3.3.1	Introduction	50
3.3.2	Temporal, Directional and Spectral Characteristics of the Wave Climate	51
3.3.3	Spectral Representation of Ocean Waves	55
3.3.4	Characterization Parameters	57
3.3.5	Challenges in Wave Climate Characterisation	60
3.3.6	Coastal Processes.	62
3.3.7	Case Study—Incident Wave Power	66
3.4	Measurement of Ocean Waves.	67
3.4.1	Overview	67
3.4.2	Surface-Following Buoy.	68
3.4.3	Sea-Bed Pressure Sensor.	69
3.4.4	Acoustic Current Profiler	69
3.4.5	Land-Based and Satellite Radar	70
3.5	Modelling of Ocean Waves.	71
3.5.1	Introduction	71
3.5.2	General Spectral Wave Models	72
3.5.3	Third Generation Spectral Wave Models.	74
3.5.4	Grid Definition	76
	References	77
4	Techno-Economic Development of WECs	81
	Arthur Pecher and Ronan Costello	
4.1	Introduction.	81
4.1.1	Continuous Evaluation of the WEC Potential	81
4.1.2	Overview of the Techno-Economic Development.	82
4.2	The WEC Development Stages	83
4.3	Techno-Economic Development Evaluation.	85
4.3.1	The Technology Readiness and Performance Level	85
4.3.2	The WEC Development Stages and the TRL Scale	87
4.3.3	The TRL-TPL R&D Matrix	88
4.3.4	Uncertainty Related to the TRL-TPL Matrix	90
4.3.5	Valuation of R&D Companies.	91
4.4	Techno-Economic Development Strategies	92
4.4.1	R&D Strategy as TRL-TPL Trajectories	92
4.4.2	Extreme Cases of Techno-Economic Development Strategy	93
4.4.3	Efficient Techno-Economic Development	95

4.5 Conclusion 97

4.6 Overview of Some of the Leading WECs 98

References 98

5 Economics of WECs. 101

Ronan Costello and Arthur Pecher

5.1 Introduction. 101

5.2 Power Is Vanity—Energy Is Sanity 102

5.3 Economic Decision Making. 103

5.3.1 Cash Flow Terminology 104

5.3.2 Time Value of Money (and Energy). 105

5.3.3 Economic Metrics 106

5.3.4 Effect of Depreciation on Discounting 112

5.3.5 Effect of Inflation on Discounting 112

5.3.6 Setting the Discount Rate 113

5.3.7 Economic Decision Making—Which Metric to Use? 114

5.3.8 Expert Oversight and Independent Review 116

5.4 Economic Analysis in Technology R&D. 117

5.5 Techno-Economic Assessment and Optimisation 118

5.6 WEC Cost-of-Energy Estimation Based on Offshore Wind

Energy Farm Experience. 119

5.6.1 Introduction 119

5.6.2 Definition of the Categories 120

5.6.3 Wind Energy Project Case 121

5.6.4 Wave Energy Case 124

5.6.5 Cost Reduction 131

5.6.6 Revenue and Energy Yield 133

5.7 Strategic Support Mechanisms. 133

References 135

6 Hydrodynamics of WECs. 139

Jørgen Hals Todalshaug

6.1 Introduction. 139

6.1.1 Wave Energy Absorption is Wave Interference 139

6.1.2 Hydrostatics: Buoyancy and Stability 140

6.1.3 Hydrodynamic Forces and Body Motions 143

6.1.4 Resonance 146

6.1.5 Oscillating Water Columns—Comments on Resonance
Properties and Modelling 147

6.1.6 Hydrodynamic Design of a Wave Energy Converter. 149

6.1.7 Power Estimates and Limits to the Absorbed Power. 153

6.1.8 Controlled Motion and Maximisation
of Output Power 156

References 157

7 Mooring Design for WECs 159
Lars Bergdahl

7.1 Introduction. 159
7.1.1 General 159
7.1.2 Mooring Design Development Overview 160
7.1.3 Wave-Induced Forces on Structures 162
7.1.4 Motions of a Moored Device in Waves 162

7.2 Metocean Conditions 162
7.2.1 Combinations of Environmental Conditions 162
7.2.2 Design Wave Conditions 163
7.2.3 Environmental Data at DanWEC 165
7.2.4 Example Design Conditions 166

7.3 Estimation of Environmental Forces 166
7.3.1 Overview and Example Floater Properties. 166
7.3.2 Mean Wind and Current Forces. 167
7.3.3 Wave Forces. 169
7.3.4 Summary of Environmental Forces on Buoy 178

7.4 Mooring System Static Properties. 179
7.4.1 Example. 179
7.4.2 Catenary Equations 180
7.4.3 Mean Excursion 182

7.5 Alternative Design Procedures. 183
7.5.1 Quasi-Static Design 183
7.5.2 Dynamic Design 187
7.5.3 Response-Based Analysis 188

7.6 Response Motion of the Moored Structure 189
7.6.1 Equation of Motion 189
7.6.2 Free Vibration of a Floating Buoy in Surge 190
7.6.3 Response to Harmonic Forces 191
7.6.4 Response Motion in Irregular Waves 194
7.6.5 Equivalent Linearized Drag Damping 196
7.6.6 Second-Order Slowly Varying Motion 197
7.6.7 Wave Drift Damping 198
7.6.8 Combined Maximum Excursions 198

7.7 Conclusions 199
