

Contents

1	Introduction to Antibiotics	1
1.1	Definition of Antibiotics	1
1.2	History of Antibiotics.....	3
1.3	The Ideal Antibiotic	4
1.4	Sources of Antibiotics	5
1.5	Discovery of Modern Antibiotics.....	6
1.6	Classification of Antibiotics	10
1.7	Background Biochemistry Information	12
1.7.1	Enzymes.....	12
1.7.2	Enzyme Inhibitors.....	13
1.7.3	Enzyme Mechanisms	14
1.7.4	Metabolism and Metabolic Pathways	16
1.7.5	Thermodynamics of Metabolic Pathways.....	18
1.7.6	High Energy Compounds.....	19
1.7.7	Metabolically Irreversible and Near Equilibrium Reactions.....	22
1.7.8	Membrane Transport.....	24
2	Development of Resistance to Antibiotics	27
2.1	Antibiotics Are No Longer Considered to be Miracle Drugs	27
2.2	Detection of Antibiotic Resistance.....	28
2.3	Classification of Antibiotic Resistance	29
2.4	Resistance Development by Point Mutations	29
2.5	Selection for Resistance	31
2.6	Resistance Development by Resistance Gene Acquisition.....	32
2.7	Mechanism of Antimicrobial Resistance	36
2.8	Synthetic Antibiotics.....	36
2.9	Alternative Approaches for Studying Antibiotics	39

2.10	Antibiotic Use in Animals.....	41
2.10.1	Therapeutic Use	42
2.10.2	Subtherapeutic Use	43
2.11	Prevention of Antibiotic Resistance Development	47
3	Antibiotics That Inhibit Cell Wall Synthesis	49
3.1	Background Biochemistry Information	49
3.1.1	Carbohydrates	49
3.1.2	Molecular Structure of Bacterial Cell Wall.....	52
3.2	Biosynthesis of Peptidoglycan of the Cell Wall.....	53
3.2.1	Stage 1: The Cytosolic Phase of Synthesis	53
3.2.2	Stage 2: The Membrane Phase of Synthesis	56
3.2.3	Stage 3: The Cell Wall Phase of Synthesis	58
3.3	Antibiotics that Inhibit Cell Wall Biosynthesis.....	60
3.3.1	Antibiotics Targeting the Cytosolic Phase of Synthesis	60
3.3.2	Antibiotics Targeting the Cell Wall Phase of Synthesis.....	63
3.3.3	Antibiotics Targeting the Membrane Phase of Synthesis	83
3.3.4	Teixobactin, A Newly Discovered Antibiotic	93
4	Antimetabolites: Antibiotics That Inhibit Nucleotide Synthesis	95
4.1	Antimetabolites	95
4.2	Background Biochemistry Information: Folic Acid	96
4.3	Antibiotics that Inhibit Folate Metabolism.....	97
4.3.1	Sulfa Drugs	98
4.3.2	Mechanism of Action of Sulfonamides.....	99
4.3.3	Negative Aspects of Sulfonamides	101
4.3.4	Non-sulfonamide Antimetabolites of Folic Acid	101
4.3.5	Antimetabolites as Dihydrofolate Reductase (DHFR) Inhibitors	102
4.3.6	Antimetabolites as Antibacterial, Antimalarial, and Anticancer Agents	104
4.3.7	Thymidylate Synthase Inhibitor: 5-Fluorouracil	106
4.3.8	Other Antimetabolites: Azaserine and Diazo-Oxo-Norleucine	107
5	Antibiotics That Inhibit Nucleic Acid Synthesis	109
5.1	Background Biochemistry Information	109
5.1.1	Structure of Nucleotides	109
5.1.2	Watson–Crick Model of DNA.....	110
5.1.3	Superhelical Structure of DNA	112
5.1.4	DNA Replication.....	113
5.2	Intercalators as Antibiotics.....	114
5.3	Inhibitors of DNA Gyrase: Quinolones	116
5.3.1	Mechanism of Resistance to Quinolones.....	119
5.4	Nitroheterocyclic Aromatic Compounds as Antibiotics	121
5.4.1	Nitroimidazoles: Antibiotics that Cleave DNA.....	122
5.4.2	Nitrofurans: Multiple Possible Mechanisms of Action.....	124

5.5	RNA Synthesis: Background Biochemistry Information.....	125
5.6	Rifamycins	126
5.7	Actinomycin D (Dactinomycin)	128
5.8	Fidaxomicin: A New Antibiotic with a New Target.....	128
6	Antibiotics That Inhibit Protein Synthesis	129
6.1	Protein Synthesis: Background Biochemistry Information	129
6.2	Antibiotics that Inhibit Protein Synthesis	135
6.2.1	Puromycin.....	135
6.2.2	Aminoglycosides.....	136
6.2.3	Resistance to Aminoglycosides.....	139
6.2.4	Tetracyclines	140
6.2.5	Chloramphenicol.....	143
6.2.6	The MLS Group of Antibiotics	144
6.2.7	Oxazolidinones	146
6.2.8	Protein Synthesis Antibiotics with Unusual Mechanisms of Action.....	148
7	Antibiotics That Affect the Membrane and Other Structural Targets	153
7.1	Background Biochemistry Information	153
7.1.1	Function of Biological Membranes	153
7.1.2	Composition of the Membrane	154
7.2	Inhibition of Bacterial Membrane Function	157
7.2.1	Antiseptics and Disinfectants that Disrupt Microbial Cell Membrane.....	157
7.2.2	Antibiotics that Function by Disrupting Microbial Cell Membrane.....	159
7.3	Antibiotics Affecting Other Structural Targets	170
7.3.1	Triclosan, The Antibiotic that Inhibits Fatty Acid Synthesis	170
7.3.2	Isoniazid: Antibiotic Against Tuberculosis	172
7.3.3	Antibiotics Targeting FtsZ, The Cell Division Protein	173
8	Antifungals, Antimalarials, and Antivirals	175
8.1	Antifungal Drugs: Antibiotics that Inhibit Growth of Fungi	175
8.1.1	Antibiotics That Bind to Ergosterol: Polyenes	175
8.1.2	Antibiotics That Inhibit Biosynthesis of Ergosterol	177
8.1.3	Antibiotics That Inhibit Biosynthesis of Fungal Cell Wall	180
8.1.4	Flucytosine: Antimetabolite Antibiotic That Inhibits Fungal DNA and Protein Syntheses.....	181
8.1.5	Combination Therapy Against Fungal Infection.....	182
8.2	Antimalarial Drugs: Antibiotics That Inhibit Growth of Malarial Parasites	182
8.2.1	DDT the Most Well-Known Insecticide	183

- 8.2.2 Antimalarial Drugs: Quinine, Chloroquine, and Mefloquine 184
- 8.2.3 Antifolates as Antimalarial Antibiotics 186
- 8.2.4 Artemisinins 187
- 8.2.5 Quick Detection of Resistant Strains 188
- 8.3 Antiviral Drugs: Agents That Inhibit Multiplication and Spread of Viruses 190
 - 8.3.1 Targets of Antiviral Antibiotics 190
 - 8.3.2 Antivirals That Inhibit Entry and Uncoating of Viruses 191
 - 8.3.3 Antivirals That Inhibit Synthesis of DNA or RNA of Viruses 191
 - 8.3.4 Protease Inhibitors as Antiviral Drugs 193
 - 8.3.5 Neuraminidase Inhibitors as Antiviral Drugs 193
 - 8.3.6 Antiviral Drugs with Unusual Mechanisms of Action 194
 - 8.3.7 Resistance Development Against Antiviral Drugs 195
