

Contents

1	Stochastic Processes	1
1.1	Background	1
1.1.1	Path Properties	2
1.1.2	Random Times and Stopping Times	3
1.1.3	Predictable and Optional σ -Fields	3
1.1.4	Martingales and Local Martingales	5
1.2	Semimartingales	7
1.2.1	The Bichteler–Dellacherie–Mokobodzki Theorem	7
1.2.2	Integration by Parts and Covariation Processes	7
1.2.3	Martingale and Semimartingale Spaces	9
1.2.4	Hypotheses \mathcal{H} and \mathcal{H}'	10
1.2.5	Change of Probability Measure and Girsanov’s Theorem	14
1.2.6	Decompositions of Supermartingales	14
1.3	Projections, Dual Projections and Applications	15
1.3.1	Projections	15
1.3.2	Dual Projections	16
1.3.3	Stopping Times and Random Times Decompositions	18
1.3.4	Azéma’s Supermartingales	20
1.3.5	Properties of Random Sets	23
1.4	Essentials of Mathematical Finance	25
1.5	Bibliographic Notes	26
1.6	Exercises	27
2	Compensators of Random Times	29
2.1	Compensator of a Default Process in Its Natural Filtration	29
2.1.1	A Key Lemma	30
2.1.2	Martingales and Predictable Representation Property	31
2.2	Compensator of the Default Process in a General Setting	33

2.2.1	A Key Lemma	34
2.2.2	\mathbb{G} -Measurability Versus \mathbb{F} -Measurability	35
2.2.3	Martingales	37
2.3	Cox Model and Extensions	41
2.3.1	Construction of a Cox Model with a Given Intensity	41
2.3.2	Conditional Expectations and Immersion	42
2.3.3	Generalisation of Cox Model	43
2.4	Compensators in a Two Defaults Setting	44
2.5	Construction of Random Time with Given Intensity	45
2.6	Dynamics of Prices	46
2.7	Bibliographic Notes	49
2.8	Exercises	50
3	Immersion	53
3.1	Immersion of Filtrations	53
3.1.1	Definition and Examples	53
3.1.2	Change of Probability Measure	55
3.2	Immersion for a Progressively Enlarged Filtration	57
3.2.1	Characterization	57
3.2.2	\mathbb{G} -Martingales Versus \mathbb{F} -Martingales	58
3.2.3	Predictable Representation Property	60
3.2.4	Change of Probability Measure	61
3.3	Multi-default Setting	63
3.3.1	Successive Enlargements	63
3.3.2	Norros' Lemma	63
3.3.3	Several Defaults in a Cox Model	64
3.3.4	Ordered Times	64
3.4	Immersion and Finance	65
3.5	Bibliographic Notes	66
3.6	Exercises	67
4	Initial Enlargement	69
4.1	Brownian and Poisson Bridges	69
4.1.1	Brownian Bridge	69
4.1.2	Poisson Bridge	72
4.2	Insider Trading	73
4.2.1	Brownian Bridge	73
4.2.2	Poisson Bridge	75
4.2.3	Information Drift in an Enlargement of Filtration Setting	77
4.3	Yor's Method	79
4.4	Jacod's Absolute Continuity Condition	82
4.4.1	Generalities	82

4.4.2	Hypothesis \mathcal{H} and Semimartingale Decomposition	88
4.4.3	Predictable Representation Property	92
4.4.4	NUPBR and Deflators	93
4.5	Jacod's Equivalence Condition	94
4.5.1	An Important Change of Probability Measure	94
4.5.2	Hypothesis \mathcal{H}' and Semimartingale Decomposition	95
4.5.3	Arbitrages	96
4.6	Some Examples in the Literature	97
4.7	Bibliographic Notes	98
4.8	Exercises	100
5	Progressive Enlargement	101
5.1	\mathbb{G} -Semimartingale Decomposition of \mathbb{F} -Martingales Stopped at a Random Time τ	101
5.2	Honest Times	104
5.2.1	Definition and Properties	104
5.2.2	\mathbb{G} -Semimartingale Decomposition of an \mathbb{F} -Martingale	108
5.2.3	Multiplicative Decomposition of Z Under (CA)	108
5.2.4	Examples of Honest Times	109
5.3	\mathcal{J} -Times	112
5.3.1	Projections and Martingales	112
5.3.2	\mathbb{G} -Martingales Versus \mathbb{F} -Martingales	115
5.3.3	Hypothesis \mathcal{H} and Semimartingale Decomposition	116
5.4	Thin Times	117
5.5	Pseudo-Stopping Times	120
5.6	Predictable Representation Property	122
5.7	Enlargement with a Future Infimum Process	123
5.8	Arbitrages in a Progressive Enlargement	124
5.8.1	Classical Arbitrages for Honest Times	125
5.8.2	NUPBR and Deflators	128
5.9	Applications of \mathcal{E} -Times to Finance	131
5.10	Bibliographic Notes	132
5.11	Exercises	134
	References	135
	Index	145
	Symbol Index	149
