

# Contents

<b>1</b>	<b>Problems with Light Emitting Devices and Their Solutions</b>	<b>1</b>
1.1	Introduction	1
1.2	Dressed Photons and Dressed-Photon–Phonons	2
1.3	Principles of Photon Emission	6
1.3.1	Single-Step De-Excitation	6
1.3.2	Two-Step De-Excitation	7
1.4	Photon Breeding	8
1.5	Fabrication and Performance of Photon Breeding Devices	10
1.5.1	Fabrication	10
1.5.2	Spatial Distribution of the Dopant Atoms	11
1.5.3	Performance	11
1.5.4	Family of Photon Breeding Devices	12
	References	12
<b>2</b>	<b>Visible Light Emitting Diodes Using Silicon Crystal</b>	<b>15</b>
2.1	Introduction	15
2.2	Device Fabrication	16
2.3	Device Operation	19
2.4	Increasing the Light Extraction Efficiency	22
	References	27
<b>3</b>	<b>Infrared Light Emitting Diodes Using Silicon Crystal</b>	<b>29</b>
3.1	Device Fabrication	29
3.2	Device Operation	31
3.3	Spatial Distribution of Boron	35
3.4	Polarization Control	39
	References	42

<b>4 Contribution and Control of Coherent Phonons</b> . . . . .	43
4.1 Strength of Phonon Coupling . . . . .	43
4.2 Contribution of the Multimode Coherent Phonons . . . . .	47
4.3 Control of Light Emission Spectral Profile . . . . .	51
4.3.1 Principle of Control . . . . .	51
4.3.2 Evaluation of Light Emission Spectrum . . . . .	56
4.3.3 Control of Spatial Distribution of Boron . . . . .	61
References . . . . .	62
<b>5 Infrared Lasers Using Silicon Crystal</b> . . . . .	65
5.1 Basic Devices . . . . .	65
5.2 Decreasing the Threshold Current Density . . . . .	70
5.3 Evaluation of Optical Amplification Quantities . . . . .	74
5.4 Novel Devices with High Output Optical Power . . . . .	77
References . . . . .	81
<b>6 Light Emitting Diodes Using Silicon Carbide Crystal</b> . . . . .	83
6.1 Basic Light Emitting Diodes . . . . .	83
6.2 Green Light Emitting Diodes . . . . .	87
6.3 Ultraviolet Light Emitting Diodes . . . . .	91
6.4 Broad-Spectral-Width Light Emitting Diodes . . . . .	97
References . . . . .	101
<b>7 Light Emitting Diodes Fabricated Using Other Crystals</b> . . . . .	103
7.1 Using a Gallium Phosphor Crystal . . . . .	103
7.1.1 Fabrication and Operation . . . . .	104
7.1.2 Changing the Barrier Height with an Applied External Field . . . . .	108
7.1.3 Optimum Condition for DPP-Assisted Annealing . . . . .	111
7.2 Using a Zinc Oxide Crystal . . . . .	113
References . . . . .	118
<b>8 Other Devices</b> . . . . .	121
8.1 Optical and Electrical Relaxation Oscillator . . . . .	121
8.2 Infrared Photodetector with Optical Amplification . . . . .	126
8.3 Polarization Rotator . . . . .	132
8.3.1 Devices Using ZnO Crystal . . . . .	132
8.3.2 Devices Using SiC Crystal . . . . .	135
References . . . . .	137
<b>Appendix A: Physical Picture of Dressed Photons</b> . . . . .	139
<b>Appendix B: Range of Interaction Mediated by Dressed Photons</b> . . . . .	147
<b>Appendix C: Coupling Dressed Photons and Phonons</b> . . . . .	163

<b>Appendix D: Photon Absorption and Emission Via Dressed Photon-Phonons . . . . .</b>	<b>179</b>
<b>Appendix E: Two-Level System Model . . . . .</b>	<b>183</b>
<b>Index . . . . .</b>	<b>187</b>

Silicon Light-Emitting Diodes and Lasers  
Photon Breeding Devices using Dressed Photons

Ohtsu, M.

2016, IX, 192 p. 135 illus., 38 illus. in color., Hardcover

ISBN: 978-3-319-42012-7
