Excel 2016 for Marketing Statistics: A Guide to Solving Practical Problems is intended for anyone looking to learn the basics of applying Excel’s powerful statistical tools to their marketing courses or work activities. If understanding statistics isn’t your strongest suit, you are not especially mathematically inclined, or if you are wary of computers, then this is the right book for you.

Here you’ll learn how to use key statistical tests using Excel without being overpowered by the underlying statistical theory. This book clearly and methodically shows and explains how to create and use these statistical tests to solve practical problems in marketing.

Excel is an easily available computer program for students, instructors, and managers. It is also an effective teaching and learning tool for quantitative analyses in marketing courses. The powerful numerical computational ability and the graphical functions available in Excel make learning statistics much easier than in years past. However, this is the first book to show Excel’s capabilities to more effectively teach marketing statistics; it also focuses exclusively on this topic in an effort to render the subject matter not only applicable and practical but also easy to comprehend and apply.

Unique features of this book:

- This book is appropriate for use in any course in marketing statistics (at both undergraduate and graduate levels) as well as for managers who want to improve the usefulness of their Excel skills.
- Includes 167 color screenshots so that you can be sure you are performing the Excel steps correctly.
- You will be told each step of the way, not only how to use Excel but also why you are doing each step so that you can understand what you are doing and not merely learn how to use statistical tests by rote.
• Includes specific objectives embedded in the text for each concept, so you can know the purpose of the Excel steps.
• This book is a tool that can be used either by itself or along with any good statistics book.
• Statistical theory and formulas are explained in clear language without bogging you down in mathematical fine points.
• You will learn both how to write statistical formulas using Excel and how to use Excel’s drop-down menus that will create the formulas for you.
• This book does not come with a CD of Excel files which you can upload to your computer. Instead, you’ll be shown how to create each Excel file yourself. In a work situation, your colleagues will not give you an Excel file; you will be expected to create your own. This book will give you ample practice in developing this important skill.
• Each chapter presents the steps needed to solve a practical marketing problem using Excel. In addition, there are three practice problems at the end of each chapter, so you can test your new knowledge of statistics. The answers to these problems appear in Appendix A.
• A “Practice Test” is given in Appendix B to test your knowledge at the end of the book. The answers to these practical marketing problems appear in Appendix C.

Thomas J. Quirk, a current professor of marketing at the George Herbert Walker School of Business & Technology at Webster University in St. Louis, Missouri (USA), teaches marketing statistics, marketing research, and pricing strategies. He has published articles in the *Journal of Educational Psychology, Journal of Educational Research, Review of Educational Research, Journal of Educational Measurement, Educational Technology, The Elementary School Journal, Journal of Secondary Education, Educational Horizons*, and *Phi Delta Kappan*. Professor Quirk has published more than 20 articles in professional journals and presented more than 20 papers at professional meetings. He holds a BS in mathematics from John Carroll University, both an MA in education and a PhD in educational psychology from Stanford University, and an MBA from the University of Missouri–St. Louis.

Professor Rhiney is currently an assistant professor of marketing in the George Herbert Walker School of Business & Technology at Webster University in St. Louis, Missouri (USA), where he teaches research design, marketing research, and marketing strategies. He holds a BSBA with an emphasis in marketing from the University of Central Missouri, an MBA with an emphasis in marketing from Webster University, and a PhD in marketing and international business from St. Louis University. He did marketing research professionally for over ten years engaging in research for companies such as Pizza Hut, Monsanto, Chrysler, and Hardee’s. He is involved in a number of quantitative research studies focused on
in-group out-group orientation on consumer attitudes, digital marketing behavior, and cross-cultural marketing and has presented his work at a number of conferences including the American Marketing Association, the International Business Association, the Marketing Management Association, and the University of Missouri-St. Louis Digital Marketing Conference.
