1 Introduction ......................................................... 1
   References ......................................................... 4

2 Bandwidth-Efficient Modulation with Frequency Division Multiple Access (FDMA) ........................................... 5
   2.1 Introduction ......................................................... 5
   2.2 Definition of Energy and Spectral Efficiency ................. 7
      2.2.1 Bandwidth or Spectrum Efficiency ...................... 8
      2.2.2 Energy Efficiency ........................................ 11
   2.3 Fundamentals of Modulation ..................................... 15
      2.3.1 The Convolution Property ................................. 15
      2.3.2 Modulation Property ..................................... 16
   2.4 Digital Baseband Modulation .................................... 18
      2.4.1 2-Level Pulse Amplitude Modulation (2-PAM) and Binary Phase Shift Keying (BPSK) ..................... 19
      2.4.2 Quadrature Amplitude Modulation (QAM) and Quadrature Phase Shift Keying (QPSK) ....................... 20
      2.4.3 Power Spectral Density of Baseband Signals .......... 24
      2.4.4 Non-Overlapped Pulse Waveform Modulation .......... 26
   2.5 Overlapped Pulse-Shaping Modulation .......................... 28
      2.5.1 Overlapped Raised-Cosine Pulse-Shaping Modulation ......................................................... 29
      2.5.2 IJF-OQPSK Modulation .................................... 33
      2.5.3 Other Overlapped Pulse-Shaping Modulations ......... 35
      2.5.4 Bit Error Rate in Coherent Demodulation ............... 40
   2.6 Minimum Bandwidth and ISI-free Nyquist Pulse Shaping .... 44
      2.6.1 Nyquist Minimum Transmission Bandwidth with ISI-Free ......................................................... 44
      2.6.2 Analog Filter Approximation to SRRC Filter ........... 54
### 3 Bandwidth-Efficient Modulation With OFDM

#### 3.1 Introduction

#### 3.2 Generation of the 802.11a OFDM Signal

- 3.2.1 Preamble Field
- 3.2.2 Signal Field
- 3.2.3 Data Field
- 3.2.4 Spectral Side-Lobe Reduction With Windowing
- 3.2.5 RF Transmitter Description
- 3.2.6 Peak-to-Average Power Ratio (PAPR)

#### 3.3 Synchronization of 802.11a OFDM Signal

- 3.3.1 Symbol Timing Synchronization
- 3.3.2 Carrier Frequency Synchronization
- 3.3.3 Channel Estimation Technique

#### 3.4 Design Challenges for RF Transceivers

- 3.4.1 RF Transceiver
- 3.4.2 Digital Baseband and MAC Processor
- 3.4.3 Radio Front-End Modules

#### 3.5 Design Applications

- 3.5.1 Marvell’s WLAN 802.11ac Transceiver
- 3.5.2 MediaTek’s 802.11a/b/g/n/ac WLAN SoC

### 4 Energy and Bandwidth-Efficient Modulation

#### 4.1 Introduction

#### 4.2 Constant Envelope Modulation of Minimum Shift Keying

#### 4.3 Constant Envelope Modulation of GMSK

- 4.3.1 VCO-Based GMSK Modulation
- 4.3.2 Quadrature Architecture of GMSK

#### 4.4 Nearly Constant Envelope Modulation of FQPSK

- 4.4.1 XPSK Modulation
- 4.4.2 FQPSK-B

#### 4.5 Coherent Demodulation

- 4.5.1 Adaptive Equalization
- 4.5.2 Coherent Detection

#### 4.6 RF Transmitter Architectures for GMSK

- 4.6.1 System Specifications of Quad-Band GSM Transmitter
- 4.6.2 Mixer-Based Frequency Up-Conversion
- 4.6.3 Phase-Locked Loop-Based Frequency Up-Conversion

5 Linearization Techniques for RF Power Amplifiers
5.1 Introduction
5.2 Memory Model of Power Amplifiers
5.3 Behavioral Modeling of a Practical Power Amplifier
5.4 Power Amplifier Linearization
  5.4.1 Digital Baseband Pre-distortion
  5.4.2 RF Analog Pre-distortion
  5.4.3 Coefficient Adaptation of Analog Pre-distortion
5.5 Applications
  5.5.1 Maxim’s RF Pre-distortion Technique
References

6 Transceiver I: Transmitter Architectures
6.1 Introduction
6.2 Brief Description of Cellular and WLAN Systems
6.3 Superheterodyne Transmitter
6.4 Direct up-Conversion Transmitter
6.5 Transmission Impairments
  6.5.1 I–Q Gain and Phase Imbalances and DC Offsets
  6.5.2 LO Leakage
  6.5.3 VCO Phase-Noise Disturbance
  6.5.4 Nonlinearity of Power Amplifier

7 Transceiver II: Receiver Architectures
7.1 Introduction
7.2 Heterodyne Receiver
  7.2.1 Image Rejection
7.3 Low-IF Receiver and Zero-IF Receiver
  7.3.1 Image Rejection in the Low-IF Receiver
  7.3.2 Image Rejection in Zero-IF Receiver
7.4 Receiver Impairments
  7.4.1 I–Q Imbalance Compensation
  7.4.2 DC Offset Cancellation
  7.4.3 Nonlinear Distortion
7.5 Channel Selection Filtering
  7.5.1 Channel Selection Filtering With Partition
  7.5.2 Channel Selection Filtering in the Analog Domain
7.6 Automatic Gain Control
  7.6.1 Receiver Sensitivity
  7.6.2 Receiver Dynamic Range and Total Analog Gain
  7.6.3 AGC Setting Strategy
