Oral Pathology in the Pediatric Patient
A Clinical Guide to the Diagnosis and Treatment of Mucosal Lesions
Preface

The authors of *Oral Pathology & the Pediatric Patient: A Clinical Guide to the Diagnosis of Mucosal Lesions* both practice clinical oral pathology in New York City and are certified by the American Board of Oral and Maxillofacial Pathology. Based on their experience seeing patients and supervising an active biopsy service, they have compiled a sampling of the oral mucosal lesions most likely to be encountered in children in everyday practice. The authors’ goal was to create an easy to use reference guide for clinicians to turn to for guidance in identifying and managing oral mucosal lesions in pediatric patients.

Oral mucosal lesions are not uncommon in the pediatric population. Fortunately, the vast majority of these mucosal lesions are benign and many are transient – being of either a traumatic or infectious etiology. Often times a diagnosis can be rendered by coupling a careful clinical history with the clinical presentation.

For each entity covered in this manual, characteristic clinical photographs are provided, the clinical appearance is concisely described, and guidance is offered on formulating a differential diagnosis and selecting appropriate treatment.

Oral mucosal indications of systemic diseases, clinical indicators of drug use, sexual abuse, and eating disorders are addressed in section two.

For those lesions in which the clinical diagnosis and subsequent patient management is unclear, it is best to seek a second opinion from a specialist. In addition, it is also often prudent to communicate your findings to the child’s pediatrician. Having a complete and accurate medical history is crucial for proper patient management.

New York, NY, USA

Elizabeth Philipone, DMD
We would like to express our sincere thanks to Dr. David Zegarelli and Dr. Michael Z. Marder for providing many clinical photos from their own collections and for sharing their vast clinical experience and knowledge with us.

## Part 1  Mucosal Lesions

1  Mucosal Lumps and Bumps with Smooth Surfaces ......................... 3
   1.1  Mucocele .......................................................... 4
   1.2  Ranula ............................................................... 8
   1.3  A Note on Salivary Gland Tumors ................................ 11
   1.4  Fibroma ............................................................... 12
   1.5  Pyogenic Granuloma ............................................... 14
   1.6  Hemangioma .......................................................... 16
   1.7  Vascular Malformation .............................................. 19
   1.8  Lymphangioma ....................................................... 20
   1.9  A Note on Soft Tissue Sarcomas ................................. 21

2  Papillary Lesions .......................................................... 23
   2.1  Verruca Vulgaris ..................................................... 24
   2.2  Squamous Papilloma ................................................ 25
   2.3  Condyloma Accuminatum .......................................... 27
   2.4  Heck’s Disease (Focal Epithelial Hyperplasia) .................. 30

3  Oral Ulcers ..................................................................... 33
   3.1  Acute Herpetic Gingivostomatitis (Primary Herpes) .......... 34
   3.2  Herpes Labialis and Recurrent Intraoral Herpes ............... 35
   3.3  Herpangina ............................................................. 38
   3.4  Hand-Foot-and-Mouth Disease .......................... 40
   3.5  Traumatic Ulcer ....................................................... 42
   3.6  Aphthous Ulcers ....................................................... 46
   3.7  Erythema Multiforme ................................................. 54
   3.8  Multifocal Oral Ulcers in a Child ............................... 59
   3.9  Impetigo ............................................................... 59

4  White and Red Macules and Patches ...................................... 61
   4.1  Morsicatio Buccarum, Linguarum, and Labiorum ............. 62
   4.2  Superficial Chemical Burn ....................................... 63
   4.3  Oral Candidiasis ....................................................... 64
   4.4  Benign Migratory Glossitis/Geographic Tongue ............... 67
4.5 Leukoplakia .................................................. 71
4.6 Erythroplakia .................................................. 75

5 Gingival Lesions .................................................. 77
  5.1 Peripheral Ossifying Fibroma .............................. 81
  5.2 Peripheral Giant Cell Granuloma ........................... 86
  5.3 Eruption Cyst .................................................. 88
  5.4 Parulis .......................................................... 90
  5.5 Summary of Focal Gingival Nodules ........................ 91
  5.6 Gingival/Alveolar Cysts of the Newborn ................. 92
  5.7 Localized Juvenile Spongiotic Gingival Hyperplasia .... 93
  5.8 Mouth-Breathing Gingivitis ................................ 95

6 Pigmented Lesions .............................................. 101
  6.1 Amalgam Tattoo .............................................. 102
  6.2 Melanotic Macule (Focal Melanosis) ....................... 103
  6.3 Physiologic (Racial) Pigmentation ......................... 106
  6.4 Mucosal Nevi .................................................. 108
  6.5 Coated Tongue ............................................... 100

Part II Mucosal Manifestations of Systemic Disease, Habits, and Abuses .................. 113

7 Mucosal Manifestations of Gastrointestinal Disease .......... 115
  7.1 Recurrent Aphthous-like Ulcers ............................ 115
  7.2 Pyostomatitis Vegetans ...................................... 115
  7.3 Mucosal Tags or Folds ....................................... 117
  7.4 Cobblestoning ............................................... 117
  7.5 Mucogingivitis ............................................... 117
  7.6 Persistent Orofacial Swelling (Orofacial Granulomatosis) 117

8 Mucosal Manifestations of Nutritional Deficiencies .......... 121

9 Mucosal Manifestations of Immunosuppression .................. 125
  9.1 HIV/AIDs ..................................................... 126

10 Oral Manifestations of Habits and Abuses .................... 129
  10.1 Physical Abuse .............................................. 129
  10.2 Eating Disorders ............................................ 132

11 Oral Soft Tissue Manifestations of Hematologic Abnormalities and Diseases .......... 135
  11.1 White Blood Cell Disorders ................................ 135
  11.2 Red Blood Cell Disorders .................................. 138
  11.3 Platelet Disorders .......................................... 140
