Contents

1 Bayesian Statistical Shape Analysis on the Manifold of Diffeomorphisms .............................................. Miaomiao Zhang and P. Thomas Fletcher 1

2 Sampling Constrained Probability Distributions Using Spherical Augmentation .................................... Shiwei Lan and Babak Shahbaba 25

3 Geometric Optimization in Machine Learning .................. Suvrit Sra and Reshad Hosseini 73

4 Positive Definite Matrices: Data Representation and Applications to Computer Vision .................................. Anoop Cherian and Suvrit Sra 93

5 From Covariance Matrices to Covariance Operators: Data Representation from Finite to Infinite-Dimensional Settings .......... Hà Quang Minh and Vittorio Murino 115

6 Dictionary Learning on Grassmann Manifolds ................. Mehrtash Harandi, Richard Hartley, Mathieu Salzmann and Jochen Trumpf 145

7 Regression on Lie Groups and Its Application to Affine Motion Tracking ................................................. Fatih Porikli 173

8 An Elastic Riemannian Framework for Shape Analysis of Curves and Tree-Like Structures .............................. Adam Duncan, Zhengwu Zhang and Anuj Srivastava 187

Index ............................................................................. 207
Algorithmic Advances in Riemannian Geometry and Applications
For Machine Learning, Computer Vision, Statistics, and Optimization
Minh, H.Q.; Murino, V. (Eds.)
2016, XIV, 208 p. 55 illus., 51 illus. in color., Hardcover
ISBN: 978-3-319-45025-4
