1	Introduction	1
1.1	Label-Free Biosensors for Cell-Based Assays	1
1.1.1	Electrochemical Transducers for Label-Free CBB	4
1.1.2	Optical Transducers for Label-Free CBB	9
1.1.3	Piezoelectric Transducers for Label-Free CBB	13
1.2	Multi-Parametric Label-Free Cell-Based Biosensing	14
	References	17
2	Objectives	31
	References	34
3	Methods and Instrumentation	35
3.1	Cell Culture	35
3.1.1	Cell Culture Conditions	35
3.1.2	Sub-cultivation of Cells	36
3.1.3	Cell Storage	37
3.1.4	Cell Preparation for Experiments	37
3.2	Impedance Spectroscopy	38
3.2.1	The Complex Impedance	39
3.2.2	Impedance Elements in Equivalent Circuits	41
3.2.3	Equivalent Circuit Models	44
3.3	The Quartz Crystal Microbalance (QCM)	49
3.3.1	Basic Principles of the QCM Technique	50
3.3.2	Electro-acoustic Modeling and Impedance Analysis of TSM Resonators	55
3.3.3	Experimental	65
3.4	Electric Cell-Substrate Impedance Sensing (ECIS)	71
3.4.1	Basic Principles of the ECIS Technique	71
3.4.2	Impedance Properties of (Cell Covered) ECIS Electrodes	73

3.4.3	Modeling the Impedance of the Cell-Electrode Interface	76
3.4.4	ECIS-QCM Combination in One Experimental Setup.	78
3.4.5	Electroporation on ECIS-QCM Sensor (ELPO-ECIS-QCM)	82
3.5	Optical Temperature and Oxygen Imaging	85
3.5.1	Basic Principles of Luminescence and Luminescence Quenching	85
3.5.2	Fluorescence Lifetime Imaging (FLIM) Using Rapid Lifetime Determination (RLD)	89
3.5.3	Experimental of FLIM-RLD	90
3.6	Light Microscopic Techniques	98
3.6.1	Phase-Contrast Microscopy	99
3.6.2	Stereomicroscopy	101
3.6.3	Fluorescence Microscopy	101
3.6.4	Confocal Laser Scanning Microscopy (CLSM)	102
3.6.5	Cytochemical Fluorescence Staining	105
	References.	110
4	MQCM: Multiple Cytomechanic Sensing	115
4.1	Layout and Oscillation Properties	116
4.1.1	2-Electrode QCM Layout	116
4.1.2	Oscillation in Air.	117
4.1.3	Oscillation Under Liquid Loading	119
4.1.4	Resonator Synchronization	121
4.1.5	Resonance Decoupling via Selective Rigid Coating	122
4.2	Decoupled 2EIQs: Impact of Film Thickness	126
4.2.1	Degree of Decoupling as a Function of Film Thickness	126
4.2.2	Film Thickness Determination.	129
4.3	Discussion	130
4.3.1	2EIQ Sensor Layout and Oscillation Properties.	130
4.3.2	Decoupling of 2EIQ Resonators	137
4.3.3	Outlook	146
	References.	149
5	QCM-ECIS: Combined Viscoelastic and Dielectric Sensing of Cells.	151
5.1	QCM-ECIS Sensor Layout and Characteristics.	153
5.1.1	Substrate-Integration of QCM-ECIS	153
5.1.2	Standard QCM-ECIS Sensor Layout	156
5.1.3	Surface Characterization	156
5.1.4	QCM-Mode: Piezoelectric Characterization of the Sensor.	159

5.1.5	ECIS-Mode: Electrochemical Characterization of the Sensor	162
5.1.6	QCM-ECIS Sensors: Systematic Variation of WE Sizes and Layouts	165
5.2	QCM-ECIS Biosensor for Cell Attachment and Spreading.	171
5.2.1	Sensor Preincubation with Culture Medium	173
5.2.2	MDCK-II Cell Attachment and Spreading	174
5.2.3	NRK Cell Attachment and Spreading	181
5.2.4	Cell Attachment and Spreading in Absence of Ca^{2+} and Mg^{2+}	185
5.3	QCM-ECIS Whole-Cell Biosensor	190
5.3.1	Degradation of the Actin Cytoskeleton	190
5.3.2	Cell Stiffening Using Chemical Fixatives	198
5.3.3	Stimulating Intracellular Signaling Cascades	202
5.3.4	Electric Manipulation and Double-Mode Impedance Analysis (ELPO-ECIS-QCM)	208
5.4	Discussion	214
5.4.1	Electrode Layout	214
5.4.2	QCM-Mode: Piezoelectric Characterization of the Sensor	216
5.4.3	ECIS-Mode: Electrochemical Characterization of the Sensor	223
5.4.4	Sensor Preincubation	227
5.4.5	Cell Attachment and Spreading	228
5.4.6	Cell Attachment and Spreading in Absence of Ca^{2+} and Mg^{2+}	237
5.4.7	Degradation of the Actin Cytoskeleton	245
5.4.8	Cell Stiffening Using Chemical Fixatives	253
5.4.9	Stimulating Intracellular Signaling Cascades	262
5.4.10	Electric Manipulation and Double-Mode Impedance Analysis (ELPO-ECIS-QCM)	268
5.4.11	Summary	277
5.4.12	Outlook	280
