# Contents

1 Introduction ............................................. 1  
1.1 Context and Motivation ................................. 1  
1.2 Outline of the Book .................................... 6  
References ............................................. 7  

2 Related Work ......................................... 15  
2.1 Petri Nets and Interpreted Petri Nets .................. 15  
2.2 Computational Complexity of Algorithms .............. 27  
References ............................................. 28  

3 Perfect Graphs and Comparability Graphs ............ 31  
3.1 Preliminaries .......................................... 31  
3.2 Perfect Graphs ........................................ 36  
3.3 Comparability Graphs .................................. 38  
3.4 Recognition and Coloring of Comparability Graphs .......... 42  
  3.4.1 Recognition of Comparability Graphs ............... 42  
  3.4.2 Coloring of Comparability Graphs .................. 45  
References ............................................. 47  

4 Hypergraphs and Exact Transversals .................. 49  
4.1 Main Definitions and Properties of Hypergraphs .... 49  
4.2 Properties of C-Exact Hypergraphs .................... 52  
4.3 Algorithms Related to C-Exact Hypergraphs .......... 53  
References ............................................. 56  

5 Analysis of Concurrent Control Systems ............. 59  
5.1 State Equation and Place Invariants ................ 59  
5.2 Concurrency Analysis ................................ 64  
5.3 Sequentiality Analysis ................................ 69  
5.4 Properties of Concurrency and Sequentiality Hypergraphs .... 72  
References ............................................. 74
6 Decomposition of Concurrent Control Systems
   6.1 SM-Decomposition Based on Place Invariants
      6.1.1 The Idea of Method
      6.1.2 Examples
   6.2 SM-Decomposition Based on Graph Theory
      6.2.1 The Idea of Method
      6.2.2 Examples
   6.3 SM-Decomposition Based on Hypergraph Theory
      6.3.1 The Idea of Method
      6.3.2 Examples
References

7 Prototyping of Concurrent Control Systems
   7.1 Prototyping Flow of the Concurrent Systems
      7.1.1 Specification by an Interpreted Petri Net
      7.1.2 Decomposition of the System
      7.1.3 Modeling of the Decomposed Modules
      7.1.4 Verification of the System
      7.1.5 Implementation of the System
   7.2 Prototyping of Integrated Concurrent Control Systems
      7.2.1 Specification by an Interpreted Petri Net
      7.2.2 Decomposition and Synchronization of the System
      7.2.3 Modeling of the Decomposed Modules as FSMs
      7.2.4 Verification of the System (Software Simulation)
      7.2.5 Implementation of the System
References

8 Modelling of Concurrent Systems in Hardware Languages
   8.1 Traditional Modelling of Concurrent Systems in Hardware Description Languages
      8.1.1 The Basic Assumptions
      8.1.2 Description of Transitions, Places, Outputs
      8.1.3 Description of Concurrency
      8.1.4 Description of Conflicts
      8.1.5 Examples
   8.2 Modelling of Concurrent Systems as a Composition of Sequential Automata
      8.2.1 Description of an FSM in Verilog
      8.2.2 Examples
References

9 Implementation of Concurrent Control Systems in FPGA
   9.1 Introduction to the Programmable Devices
   9.2 Field Programmable Gate Arrays
   9.3 Implementation of Concurrent Controllers in FPGA
Prototyping of Concurrent Control Systems
Implemented in FPGA Devices
