

Contents

Part I

1	Ill-Posed Problems in Imaging and Computer Vision	3
1.1	Introduction	3
1.2	The Concepts of Well Posedness and Ill Posedness	5
1.3	Ill-Posed Problems Described by Linear Equations	6
1.4	Solving Ill-Posed Problems	8
1.5	Image Restoration	10
1.6	Image Interpolation	11
1.7	Motion Estimation	13
1.8	Volumetric Models for Shape Representation	14
1.9	Prior Knowledge About the Solution	18
1.10	Mathematical Formulation of Regularization	20
1.11	Regularization of Linear Inverse Problems	21
	References	23
2	Selection of the Regularization Parameter	29
2.1	General Considerations	29
2.2	Discrepancy Principle	30
2.3	L-Curve	33
2.4	Mallow's C_L	34
2.5	Generalized Cross Validation	36
2.6	Information Approach to the Selection of a Regularization Parameter	37
	References	49

Part II

3	Introduction to Optimization	53
3.1	Optimization Problems	53
3.2	Definition of Minimum Points	55
3.3	Conditions for the Minimum Point	59

3.4	One-Dimensional Search	61
3.4.1	Golden Section Search	62
3.4.2	Newton’s Method	63
3.4.3	Secant Method	65
3.4.4	Line Search	65
	References	66
4	Unconstrained Optimization	69
4.1	Direct Search Methods	69
4.1.1	Random Search Methods	70
4.1.2	Pattern Search Contours	72
4.1.3	Geometrical Search	73
4.2	Derivative-Based Methods	75
4.2.1	Gradient Descent Methods	76
4.2.2	Steepest Descent Method	78
4.3	Newton’s Method	81
4.4	Conjugate Direction Methods	85
4.4.1	Conjugate Directions	85
4.4.2	Conjugate Gradient Algorithm for a Quadratic Function	87
	References	90
5	Constrained Optimization	93
5.1	Introduction	93
5.2	Constrained Optimization with Linear Constraints	94
5.2.1	Single Linear Equality Constraint	95
5.2.2	Multiple Linear Equality Constraints	97
5.2.3	Optimization Methods for Linear Equality Constraints	99
5.2.4	Linear Inequality Constraints	100
5.2.5	Optimization Methods for Linear Inequality Constraints	103
5.3	Constrained Optimization with Nonlinear Constraints	103
5.3.1	Single Nonlinear Equality Constraint	104
5.3.2	Multiple Nonlinear Equality Constraints	105
5.3.3	Nonlinear Inequality Constraints	109
	References and Further Readings	109
 Part III		
6	Frequency-Domain Implementation of Regularization	113
6.1	Space-Invariance and Circulant Matrices	113
6.1.1	One-Dimensional Time-Invariant Systems	114
6.1.2	Two-Dimensional Space-Invariant Systems	115

6.2	Frequency-Domain Implementation of the Constrained Least Square Filter	116
6.2.1	Derivation of the Constrained Least Square Filter	117
6.2.2	Image Restoration Using the CLS Filter	118
6.3	Wiener Filtering	122
6.3.1	Derivation of the Wiener Filter	122
6.3.2	Practical Implementation of the Wiener Filter Using Spectrum Estimation	124
	References	130
7	Iterative Methods	131
7.1	Solution Space	132
7.2	Formulation of Iterative Methods	133
7.2.1	Well-Posed Case	133
7.2.2	Ill-Posed Case	134
7.3	Convergence of Iterative Algorithms	135
7.4	Accelerating Convergence by Preconditioning	136
	Reference	137
8	Regularized Image Interpolation Based on Data Fusion	139
8.1	Introduction	139
8.2	Mathematical Model for the Subsampling Process	141
8.2.1	Continuous-Discrete Model	142
8.2.2	Discrete-Discrete Model	143
8.3	Multiframe Regularized Image Interpolation Algorithm	144
8.3.1	Data Fusion for LR Image Frames: Level-1 Fusion	145
8.3.2	Regularization-Based Adaptive Fusion: Level-2 Fusion	146
8.3.3	Regularized Image Restoration	146
8.3.4	Orientation Analysis Based on the Steerable Filter	147
8.3.5	Spatially Adaptive Fusion	149
	References	153
 Part IV		
9	Enhancement of Compressed Video	159
9.1	Introduction	159
9.2	Image Degradation Model	162
9.3	Definition of Convex Sets Based on Analysis of Differential Images	164

9.4	Modified Regularized Image Restoration	167
9.4.1	Spatially Adaptive Image Restoration	168
9.4.2	Block-Based Edge Classification	169
9.4.3	Projection Operator	169
9.5	Analysis of Restoration in the Differential Image Domain	170
	References	176
10	Volumetric Description of Three-Dimensional Objects for Object Recognition	179
10.1	Introduction	179
10.2	Parametric Model Representation Using Superquadrics	180
10.3	Definition and Properties of Superquadrics	180
10.4	Superquadric Inside-Outside Function	181
10.5	Superquadric Deformation	182
10.6	Tapering Deformation	182
10.7	Bending Deformation	183
10.8	Recovery of Nondeformed Superquadric Models	184
10.9	Homogeneous Transformation of Superquadrics	184
10.10	Superquadric Parameter Estimation	186
10.11	Initial Values Estimation	187
10.12	The Levenberg-Marquardt Algorithm	188
10.13	Superquadric Model of 3D Objects	189
10.14	Surface Segmentation of 3D Object	191
10.15	Volumetric Decomposition	191
	References	196
11	Regularized 3D Image Smoothing	197
11.1	Introduction	197
11.2	Regularization Based on Area Decreasing Flow	199
11.3	Range Data Smoothing	200
11.3.1	Area Decreasing Stabilizer for Range Data	201
11.3.2	Edge Preservation for Range Data	204
11.4	Surface Mesh Smoothing	205
11.4.1	Area Decreasing Stabilizer for Surface Mesh	206
11.4.2	Edge Preservation for Surface Mesh	208
	References	217
12	Multimodal Scene Reconstruction Using Genetic Algorithm-Based Optimization	219
12.1	Introduction	219
12.2	Multisensor Registration for Photo-Realistic Scene Reconstruction	222
12.2.1	Landmark-Based Image Registration	223

12.2.2	Similarity Metric-Based Registration	227
12.2.3	Similarity Measures for Automatic Multimodal Alignment	228
12.2.4	Information Theoretic Metrics	229
12.2.5	Mutual Information Criterion	230
12.2.6	χ^2 -Information Criterion	231
12.3	LADAR-Color Registration and Integration	232
12.3.1	Optimization Technique for Registration Algorithms	232
12.3.2	Genetic Algorithms	235
12.3.3	Local Search: Tabu Search	237
12.3.4	Texture Mapping	238
12.4	Experimental Results	239
12.4.1	Registration Results	239
12.4.2	Texture Mapping Results	242
12.4.3	Reconstruction Results	243
	References	245
Appendix A	Matrix-Vector Representation for Signal Transformation	249
Appendix B	Discrete Fourier Transform	257
Appendix C	3D Data Acquisition and Geometric Surface Reconstruction	267
Appendix D	Mathematical Appendix	273
Index	291
