Contents

1 Is Urban Future Predictable? .......................................... 1
  1.1 Emergence ............................................. 4
  1.2 Generic Dynamic Features of Systems of Cities .......... 6
    1.2.1 The Hierarchical Differentiation of City Sizes .... 6
    1.2.2 The Meta-Stability of Urban Hierarchies ......... 7
    1.2.3 A Regular Quasi-stochastic Process of Growth .... 8
    1.2.4 Hierarchical Diffusion of Innovation Waves and 
         Functional Specializations .......................... 9
  1.3 Variety in the Evolution of Urban Systems ............. 10
    1.3.1 A Simplified Typology of Systems of Cities .... 12
    1.3.2 Systematic Variations in the Rhythm 
         of Urban Growth ................................ 13
  1.4 Urban Future: Models and Scenarios .................. 14
    1.4.1 Challenges in Building Scenarios About Urban 
         Evolution ......................................... 14
    1.4.2 Challenges in Model Validation .................... 16
References ........................................................ 17

2 The SimpopLocal Model ...................................... 21
  2.1 Introduction .......................................... 21
  2.2 Purpose of SimpopLocal ................................ 21
  2.3 Entities, State Variables and Scales .................. 22
  2.4 Processes Overview and Scheduling .................... 23
    2.4.1 Population Growth Mechanism ..................... 23
    2.4.2 Apply Innovation Mechanism ...................... 24
    2.4.3 Create and Diffuse Innovation Mechanisms ....... 25
  2.5 Initial Conditions .................................... 28
  2.6 Input ............................................... 29
  2.7 Running the Model for Parameter Estimates: Calibration . . . . . . 31
3 Evaluation of the SimpopLocal Model

3.1 Quantitative Evaluation
3.1.1 Stopping Criterion
3.1.2 Expectations
3.1.3 Handling the Stochasticity

3.2 Automated Calibration
3.2.1 Optimization Heuristic
3.2.2 Adaptation of NSGA2 to a Stochastic Model
3.2.3 Experimental Setup
3.2.4 Results

3.3 Calibration Profiles
3.3.1 Algorithm
3.3.2 Guide of Interpretation
3.3.3 Result Analysis

3.4 Conclusion

References

4 An Incremental Multi-Modelling Method to Simulate Systems of Cities’ Evolution

4.1 Introduction

4.2 Methodological and Technical Framework
for Multi-modelling Systems of Cities
4.2.1 Complementary and Competing Theories
4.2.2 A Methodology for Implementing Multi-models
4.2.3 Exploiting the Results of a Family of Models

4.3 A Family of Models of (Post-) Soviet Cities: MARIUS
4.3.1 Ordering Possible Causes of Evolution from the Most Generic to the Most Specific
4.3.2 Implementing Modular Mechanisms

4.4 Geographical Insights on (Post-) Soviet City Growth from Multi-modelling
4.4.1 Mechanisms’ Performance
4.4.2 Parameter Values
4.4.3 Residual Trajectories

4.5 VARIUS: A Visual Aid to Model Composition and Interpretation
4.5.1 Building the Model Online
4.5.2 Running the Model Online
4.5.3 Analyzing Results Online or ‘How Close Are We?’

4.6 Conclusion
