

Contents

1 A Brief History of Silicene	1
References	8
2 Freestanding Silicene	13
2.1 Reconstructions of Bulk Silicon Surfaces	13
2.2 Atomic Structure and Stability of Freestanding Silicene	16
2.3 Electronic Structure of Freestanding Silicene	19
2.4 Hydrogenation: Silicane and Germanane	20
2.5 Oxygenation	25
2.6 Interaction with Halogens	27
2.7 Functionalization of Silicene	28
2.8 Dumbbell Structure	30
2.9 Nanoribbons	33
References	36
3 Silicene on Ag Substrate	41
3.1 Experimental Evidence	42
3.2 Growth Mechanism	45
3.3 The Nature of the Linear Bands	47
References	50
4 Multilayer Silicene	53
4.1 Experimental Evidence	53
4.2 Atomic Structure	54
4.3 Silicites	55
References	61
5 Germanene, Stanene and Other 2D Materials	63
5.1 Binary Compounds of Group IV and Group III–V Elements	68
5.2 Borophene and Phosphorene	72
5.3 Transition Metal Dichalcogenides	74
5.4 Chalcogenides of Sn	78

5.5	Portlandite and Brucite	80
5.6	Concluding Remarks	82
	References	83
6	Strain Engineering of 2D Materials	87
6.1	MoS ₂	87
6.2	MoSe ₂	88
6.3	WSe ₂	90
6.4	ReSe ₂	91
6.5	Black Phosphorus	94
	References	96

Introduction to the Physics of Silicene and other 2D
Materials

Cahangirov, S.; Sahin, H.; Le Lay, G.; Rubio, A.

2017, X, 96 p. 52 illus., 51 illus. in color., Softcover

ISBN: 978-3-319-46570-8
