

Contents

1	Introduction	1
1.1	Affine Control Systems	3
1.2	Examples of Affine Control Systems	3
1.3	Optimal Trajectory Tracking	7
	References	15
2	Exactly Realizable Trajectories	17
2.1	Formalism	17
2.1.1	The Projectors \mathcal{P} and \mathcal{Q}	18
2.1.2	Separation of the State Equation	19
2.2	Exactly Realizable Trajectories	23
2.3	Linearizing Assumption	33
2.4	Controllability	35
2.4.1	Kalman Rank Condition for LTI Systems	36
2.4.2	Derivation of the Kalman Rank Condition	37
2.4.3	Controllability for Systems Satisfying the Linearizing Assumption	42
2.4.4	Discussion	47
2.5	Output Controllability	49
2.5.1	Kalman Rank Condition for the Output Controllability of LTI Systems	50
2.5.2	Output Controllability for Systems Satisfying the Linearizing Assumption	51
2.6	Output Realizability	55
2.6.1	General Procedure	55
2.6.2	Output Trajectory Realizability Leads to Differential-Algebraic Systems	57
2.6.3	Realizing a Desired Output: Examples	59
2.7	Conclusions	69
2.7.1	Summary	69

2.7.2	Differential Flatness.	72
2.7.3	Outlook.	75
	References.	77
3	Optimal Control	79
3.1	The Necessary Optimality Conditions.	79
3.1.1	Statement of the Problem	80
3.1.2	Derivation of the Necessary Optimality Conditions.	80
3.1.3	Optimal Trajectory Tracking.	83
3.1.4	Discussion.	83
3.2	Singular Optimal Control	86
3.2.1	The Kelly Condition	86
3.3	Numerical Solution of Optimal Control Problems	90
3.4	Exactly Realizable Trajectories and Optimal Control	92
3.4.1	Usual Necessary Optimality Conditions	92
3.4.2	The Generalized Legendre–Clebsch Conditions	94
3.5	An Exactly Solvable Example	99
3.5.1	Problem and Exact Solution	99
3.5.2	Different Terminal Conditions.	101
3.5.3	Approximating the Exact Solution	103
3.6	Conclusions	115
	References.	117
4	Analytical Approximations for Optimal Trajectory Tracking	119
4.1	Two-Dimensional Dynamical Systems	120
4.1.1	General Procedure.	120
4.1.2	Necessary Optimality Conditions	120
4.1.3	Rearranging the Necessary Optimality Conditions.	122
4.1.4	Outer Equations	123
4.1.5	Inner Equations.	126
4.1.6	Composite Solutions and Solution for Control	132
4.1.7	The Limit $\epsilon \rightarrow 0$	135
4.2	Comparison with Numerical Results.	138
4.2.1	Results	138
4.2.2	Discussion.	144
4.3	Optimal Feedback Control	146
4.3.1	Continuous Time Feedback.	148
4.3.2	Continuous Time-Delayed Feedback.	155
4.3.3	Discussion.	157
4.4	General Dynamical System.	158
4.4.1	Rearranging the Necessary Optimality Conditions.	159
4.4.2	Outer Equations	165
4.4.3	Inner Equations—Left Side.	166
4.4.4	Inner Equations—Right Side.	171
4.4.5	Discussion of Inner Equations.	173

- 4.4.6 Matching 174
- 4.4.7 Exact State Solution for $\epsilon = 0$ 177
- 4.4.8 Exact Control Solution for $\epsilon = 0$ 179
- 4.4.9 Linearizing Assumption 182
- 4.4.10 Discussion. 186
- 4.5 Conclusions 188
 - 4.5.1 Analytical Results for $\epsilon \rightarrow 0$ 188
 - 4.5.2 Weak and Strong Coupling. 191
- References. 193
- 5 Control of Reaction-Diffusion Systems. 195**
 - 5.1 Formalism. 197
 - 5.2 Split Up the State Equation 199
 - 5.3 Exactly Realizable Distributions 201
 - 5.4 Position Control of Traveling Waves 204
 - 5.5 Discussion and Outlook 214
 - 5.5.1 Optimal Control of Reaction-Diffusion Systems 214
 - 5.5.2 Outlook. 216
 - References. 217
- Appendix 221**
- Curriculum Vitae 237**
