
Contents

1	Preliminaries	1
1.1	Matrix and Determinant Preliminaries	1
1.2	Probability Preliminaries	8
1.3	Least-Squares Preliminaries	15
	Exercises.	17
2	Kalman Filter: An Elementary Approach	19
2.1	The Model	19
2.2	Optimality Criterion	20
2.3	Prediction-Correction Formulation.	22
2.4	Kalman Filtering Process	26
	Exercises.	27
3	Orthogonal Projection and Kalman Filter	33
3.1	Orthogonality Characterization of Optimal Estimates	33
3.2	Innovations Sequences.	35
3.3	Minimum Variance Estimates	37
3.4	Kalman Filtering Equations	38
3.5	Real-Time Tracking.	43
	Exercises.	45
4	Correlated System and Measurement Noise Processes.	51
4.1	The Affine Model	51
4.2	Optimal Estimate Operators	53
4.3	Effect on Optimal Estimation with Additional Data	54
4.4	Derivation of Kalman Filtering Equations	57
4.5	Real-Time Applications	63
4.6	Linear Deterministic/Stochastic Systems.	65
	Exercises.	67
5	Colored Noise Setting	69
5.1	Outline of Procedure	70
5.2	Error Estimates.	71
5.3	Kalman Filtering Process	73

5.4	White System Noise	76
5.5	Real-Time Applications	76
	Exercises.	78
6	Limiting Kalman Filter	81
6.1	Outline of Procedure	82
6.2	Preliminary Results	83
6.3	Geometric Convergence	92
6.4	Real-Time Applications	98
	Exercises.	99
7	Sequential and Square-Root Algorithms	101
7.1	Sequential Algorithm.	101
7.2	Square-Root Algorithm	107
7.3	An Algorithm for Real-Time Applications	110
	Exercises.	111
8	Extended Kalman Filter and System Identification	115
8.1	Extended Kalman Filter	115
8.2	Satellite Orbit Estimation	118
8.3	Adaptive System Identification	120
8.4	An Example of Constant Parameter Identification	123
8.5	Modified Extended Kalman Filter	125
8.6	Time-Varying Parameter Identification	131
	Exercises.	135
9	Decoupling of Filtering Equations	139
9.1	Decoupling Formulas.	139
9.2	Real-Time Tracking	142
9.3	The $\alpha - \beta - \gamma$ Tracker	144
9.4	An Example	147
	Exercises.	148
10	Kalman Filtering for Interval Systems	151
10.1	Interval Mathematics	152
10.1.1	Intervals and Their Properties	152
10.1.2	Interval Arithmetic	153
10.1.3	Rational Interval Functions.	157
10.1.4	Interval Expectation and Variance	159
10.2	Interval Kalman Filtering	161
10.2.1	The Interval Kalman Filtering Scheme	162
10.2.2	Suboptimal Interval Kalman Filter	163
10.2.3	An Example of Target Tacking	165
10.3	Weighted-Average Interval Kalman Filtering	167
	Exercises.	168

11	Wavelet Kalman Filtering	171
11.1	Wavelet Preliminaries	171
11.1.1	Wavelet Fundamentals	172
11.1.2	Discrete Wavelet Transform and Filter Banks	174
11.2	Singal Estimation and Decomposition	177
11.2.1	Estimation and Decomposition of Random Signals	177
11.2.2	An Example of Random Walk	181
	Exercises.	182
12	Distributed Estimation on Sensor Networks	185
12.1	Background	185
12.2	Problem Description	186
12.3	Algorithm Convergence	190
12.4	A Simulation Example.	194
	Exercises.	195
13	Notes	197
13.1	The Kalman Smoother.	197
13.2	The $\alpha - \beta - \gamma - \theta$ Tracker	199
13.3	Adaptive Kalman Filtering	202
13.4	Adaptive Kalman Filtering Approach to Wiener Filtering.	203
13.5	The Kalman–Bucy Filter	204
13.6	Stochastic Optimal Control.	205
13.7	Square-Root Filtering and Systolic Array Implementation.	206
	References	209
	Answers and Hints to Exercises	213
	Index	245

Kalman Filtering
with Real-Time Applications
Chui, C.K.; Chen, G.
2017, XVIII, 247 p. 34 illus., Hardcover
ISBN: 978-3-319-47610-0
