Contents

1 Introduction ................................................................. 1

2 Oil Company Finances ....................................................... 3
   2.1 How Oil Companies Make Investment Decisions ................. 3
   2.2 Who Owns the Resource? ........................................... 4
   2.3 Seismic Surveys: Assessing the Resource ....................... 5
   2.4 Drilling a Well .................................................... 6
   2.5 How Much Will All This Cost? Will the Company Make Money? .................................................. 10
   2.6 Financial Metrics .................................................. 13
   2.7 More Complex Projects ............................................ 15
   2.8 Government Policy Impacts ....................................... 17
   2.9 Additional Financial Considerations ............................ 19
   2.10 Combining Prospects into Programs ............................ 20
   2.11 Finding Oil: A Risky Business .................................. 21
   2.12 Gambler’s Ruin—The Risk of Failure .......................... 22
   2.13 Selection of Projects ............................................ 23

3 Some Basics of Petroleum Geology ................................... 25
   3.1 Conventional Oil and Natural Gas Formation ................ 27
   3.2 A Brief Excursion Through the “Unconventional” Alternative Sources of Oil ........................................ 29
      3.2.1 Conventional “Unconventional” Oil Accumulations ... 29
      3.2.2 Tight Oil and Tight Gas ................................. 29
      3.2.3 Other Unconventional Oil ............................... 35
   3.3 Non-oil Energy Options .......................................... 37
      3.3.1 Natural Gas ................................................. 37
      3.3.2 Coal ...................................................... 37
      3.3.3 Nuclear ................................................. 38
      3.3.4 Hydroelectric .......................................... 38
      3.3.5 “Renewables” ........................................... 38
4 Peak Oil

4.1 Hubbert’s Predictions of Oil Supply

4.2 Campbell’s Predictions of Oil Supply

4.3 Supply Peaks Versus Demand Peaks

4.4 Definitions in the Peak Oil Analysis

5 Energy in the Economy

5.1 Some Basic Thermodynamics

5.2 Energy Systems

5.3 Ecologic Systems

5.4 Measuring the Economy

5.5 Energy and the Economy

5.6 Net Energy and EROI

5.7 Economics of Future Energy

6 Oil’s Future Role in the Economy

6.1 Changes in Transportation

6.2 Additional Financial Disincentives to Transition

6.3 The Global Energy Transition Situation

6.4 The Global Economic Transition

7 Political Issues

7.1 Taxes and Subsidies

7.2 Market Stability

7.3 Geographical Issues

7.4 Climate Change

8 Forecasting Natural Gas and Oil Production and Use

8.1 Harsh New Environments

8.2 Tar Sands

8.3 Tight Oil

8.4 Natural Gas

8.5 The Changing Nature of Energy Markets

9 “Muddling Through”
