

Springer Handbook of Electronic and Photonic Materials

1. Perspectives on Electronic and Photonic Materials

Tim Smeeton and Colin Humphreys

Fundamental Properties

2. Electrical Conduction in Metals and Semiconductors

Safa Kasap, Cyril Koughia and Harry E. Ruda

3. Optical Properties of Electronic Materials: Fundamentals and Characterization

Jan Mistrik, Safa Kasap, Harry E. Ruda, Cyril Koughia and Jai Singh

4. Magnetic Properties:

From Traditional to Spintronic

Charbel Tannous, Jacek Gieraltowski

5. Defects in Monocrystalline Silicon

Wilfried von Ammon, Andreas Sattler and Gudrun Kissinger

6. Diffusion in Semiconductors

Derek Shaw

7. Photoconductivity in Materials Research

Stephen Reynolds, Monica Brinza, Mohammed L. Benkhedir and Guy J. Adriaenssens

8. Electronic Properties of Semiconductor Interfaces

Winfried Mönch

9. Charge Transport in Disordered Materials

Sergei Baranovskii and Oleg Rubel

10. Dielectric Response

Leonard Dissado

11. Ionic Conduction and Applications

Harry Tuller

Growth and Characterization

12. Bulk Crystal Growth: Methods and Materials

Peter Capper

13. Single-Crystal Silicon: Growth and Properties

Fumio Shimura

14. Epitaxial Crystal Growth: Methods and Materials

Peter Capper, Stuart Irvine and Tim Joyce

15. Narrow Bandgap II-VI Semiconductors: Growth

Peter Capper

16. Wide-Bandgap II-VI Semiconductors: Growth and Properties

Minoru Isshiki and Jifeng Wang

17. Structural Characterization

Paul D. Brown

18. Surface Chemical Analysis

David Sykes

19. Thermal Properties and Thermal Analysis: Fundamentals, Experimental Techniques and Applications

Safa Kasap, Jiří Málek and Roman Svoboda

20. Electrical Characterization

of Semiconductor Materials and Devices

M. Jamal Deen and Fabien Pascal

Materials for Electronics

21. Single-Crystal Silicon: Electrical and Optical Properties

Mark Auslender and Shlomo Hava

22. Silicon-Germanium: Properties, Growth and Applications

Yaser M. Haddara, Peter Ashburn and Darren M. Bagnall

23. Temperature-Insensitive Band-Gap III-V Semiconductors: Tl-III-V and III-V-Bi

Hajime Asahi

24. Amorphous Semiconductors: Structure, Optical, and Electrical Properties

Kazuo Morigaki and Chisato Ogihara

25. Amorphous and Microcrystalline Silicon

Akihisa Matsuda

26. Ferroelectric Materials

Roger Whatmore

27. Dielectric Materials for Microelectronics

Robert M. Wallace

28. Thin Films

Robert D. Gould[†], Safa Kasap and Asim K. Ray

29. Thick Films

Neil White

Materials for Optoelectronics and Photonics

30. III–V Ternary and Quaternary Compounds

Sadao Adachi

31. Group III Nitrides

Romualdo A. Ferreyra, Congyong Zhu, Ali Teke and Hadis Morkoç

32. Electron Transport Within III–V Nitride Semiconductors

Stephen K. O'Leary, Poppy Siddiqua, Walid A. Hadi, Brian E. Foutz, Michael S. Shur and Lester F. Eastman[†]

33. II–IV Semiconductors for Optoelectronics: CdS, CdSe, CdTe

Minoru Isshiki and Jifeng Wang

34. II–VI Narrow Bandgap Semiconductors: Optoelectronics

Ian M. Baker

35. Optoelectronic Devices and Materials

Stephen J. Sweeney and Jayanta Mukherjee

36. Liquid Crystals

Geoffrey Luckhurst and David Dunmur

37. Organic Photoconductors

David S. Weiss and Martin Abkowitz[†]

38. Luminescent Materials

Andy Edgar

39. Nano-Engineered Tunable Photonic Crystals

Harry E. Ruda and Naomi Matsuura

40. Quantum Wells, Superlattices, and Band-Gap Engineering

Mark Fox and Radu Ispasoiu

41. Glasses for Photonic Integration

Ray DeCorby and Mehrdad Irannejad

42. Optical Nonlinearity in Photonic Glasses

Keiji Tanaka

Novel Materials and Selected Applications

43. Solar Cells and Photovoltaics

Stuart Irvine

44. Disordered Semiconductors on Mechanically Flexible Substrates for Large-Area Electronics

Peyman Servati and Arokia Nathan

45. Photoconductors for X-Ray Image Detectors

M. Zahangir Kabir and Safa Kasap

46. Phase-Change Memory Materials

Alexander V. Kolobov, Junji Tominaga and Paul Fons

47. Carbon Nanotubes and Bucky Materials

Mark Baxendale

48. Graphene

Henry H. Radamson

49. Magnetic Information-Storage Materials

Charbel Tannous and R. Lawrence Comstock[†]

50. High-Temperature Superconductors

Rainer Wesche

51. Molecular Electronics

Michael C. Petty, Takashi Nagase, Hitoshi Suzuki and Hiroyoshi Naito

52. Organic Materials for Chemical Sensing

Asim K. Ray

53. Packaging Materials

Darrel Frear

54. Organic Solar Cells

Masahiro Hiramoto and Yusuke Shinmura

55. Materials for Terahertz Engineering

Roger Lewis

56. Metamaterials

Vassili Fedotov

57. Thermoelectric Materials

Donald T. Morelli

58. Transparent Conductive Oxides

Hideo Hosono and Kazushige Ueda

59. Inorganic Perovskite Oxides

Tatsumi Ishihara

Glossary of Defining Terms
