

# Contents

<b>1 Introduction</b> . . . . .	1
References. . . . .	2
<b>2 Theoretical Backgrounds of Interaction-induced Theory</b> . . . . .	3
2.1 Multipole Electrical Moments . . . . .	3
2.1.1 Coordinate System . . . . .	3
2.1.2 Cartesian Definition. . . . .	4
2.1.3 Irreducible Spherical Tensor Definition. . . . .	5
2.1.4 Dependence on the Origin of the Coordinate System . . . . .	6
2.2 Interaction Hamiltonian . . . . .	6
2.2.1 Large Separations . . . . .	6
2.2.2 Small Separations . . . . .	8
2.3 Interaction Energy . . . . .	9
2.3.1 Long-Range Distances . . . . .	9
2.3.2 Small Distances. . . . .	11
2.4 (Hyper)Polarizabilities . . . . .	13
References. . . . .	15
<b>3 Interaction-induced Dipole Moment</b> . . . . .	17
3.1 General Backgrounds . . . . .	17
3.1.1 Computational Features. . . . .	17
3.1.2 Long-Range Analytical Formalism. Induction and Dispersion Contributions. . . . .	18
3.1.3 Exchange Interaction Contributions. . . . .	21
3.2 Dipole Moment of van der Waals Complexes . . . . .	23
3.2.1 Dipole Moments of Small Complexes. . . . .	24
3.2.2 Dipole Moment Surface of the van der Waals Complex CH <sub>4</sub> -Ar. . . . .	28
3.2.3 Dipole Moment Surface of the van der Waals Complex CH <sub>4</sub> -N <sub>2</sub> . . . . .	30
3.2.4 Dipole Moment Surface of the Ethylene Dimer . . . . .	39
References. . . . .	44

<b>4</b>	<b>Interaction-induced Polarizability</b> . . . . .	51
4.1	Interaction-induced Polarizability Theory . . . . .	52
4.1.1	Ab Initio Calculation Features. . . . .	52
4.1.2	Long-Range Approximation . . . . .	53
4.1.3	Exchange Contributions. Analytical Form. . . . .	55
4.2	Polarizabilities of van der Waals Complexes . . . . .	56
4.2.1	Polarizabilities of Atom-Atomic Complexes . . . . .	56
4.2.2	Polarizabilities of $X_2$ -Y Complexes . . . . .	58
4.2.3	Polarizabilities of $X_2$ - $Y_2$ Complexes. . . . .	63
4.2.4	Polarizability of $CH_4$ - $N_2$ Complex . . . . .	67
4.2.5	Polarizabilities of $C_2H_4$ - $C_2H_4$ Complex . . . . .	74
	References. . . . .	76
<b>5</b>	<b>Interaction-induced Hyperpolarizability</b> . . . . .	83
5.1	Theoretical Treatment. . . . .	84
5.1.1	Computational Details. . . . .	84
5.1.2	Analytical Representation . . . . .	85
5.2	First Hyperpolarizability of the $CH_4$ - $N_2$ van der Waals Complex . . . . .	87
5.2.1	First Hyperpolarizability Surface . . . . .	88
5.2.2	First Hyperpolarizability of the Most Stable Configuration . . . . .	88
5.2.3	First Hyperpolarizability of Free Oriented Interacting $CH_4$ and $N_2$ Molecules . . . . .	90
5.3	Multipole Moments and High-Order Polarizabilities of Some Atmospheric and Interstellar Molecules . . . . .	93
	References. . . . .	96
<b>6</b>	<b>Conclusion</b> . . . . .	103
	<b>Appendix A: Transformation Rules of the Tensor Components Under Coordinate System Rotation</b> . . . . .	105
	<b>Appendix B: Nonzero Independent Electric Multipole Moments and (Hyper)polarizabilities for Molecules of Different Symmetry Group</b> . . . . .	107
	<b>Glossary</b> . . . . .	109

Interaction-induced Electric Properties of van der Waals  
Complexes

Cherepanov, V.N.; Kalugina, Y.N.; Buldakov, M.A.

2017, VIII, 109 p. 30 illus., 10 illus. in color., Softcover

ISBN: 978-3-319-49030-4
