

Contents

1	An Overview of the Finite Element Method	1
1.1	Features of the Finite Element Method	2
1.2	Using This Book	3
2	A First Example	5
2.1	Some Brief Mathematical Preliminaries	5
2.2	A Model Differential Equation	6
2.3	The Weak Formulation	6
2.4	Elements and Nodes	8
2.5	Basis Functions	9
2.6	The Finite Element Solution	10
2.7	Algebraic Equations Satisfied by the Finite Element Solution	11
2.8	Assembling the Algebraic Equations	13
	2.8.1 Calculating the Local Contributions	15
	2.8.2 Assembling the Global Matrix	16
2.9	A Summary of the Steps Required	17
2.10	Computational Implementation	17
2.11	Evaluating the Finite Element Solution at a Given Point	19
2.12	Is the Finite Element Solution Correct?	20
2.13	Exercises	21
3	Linear Boundary Value Problems	25
3.1	A General Boundary Value Problem	25
	3.1.1 A Note on the Existence and Uniqueness of Solutions	26
3.2	The Weak Formulation	27
	3.2.1 Some Definitions	27
	3.2.2 Deriving the Weak Formulation	28

3.3	The Finite Element Solution	30
3.3.1	The Mesh	30
3.3.2	Basis Functions	30
3.3.3	Sets of Functions.	34
3.3.4	The Finite Element Solution	34
3.3.5	The System of Algebraic Equations	35
3.4	Assembling the Algebraic Equations	37
3.4.1	The Contributions from Integrals.	37
3.4.2	Completing the Assembly of the Linear System	39
3.5	Approximating Integrals Using Numerical Quadrature	40
3.6	The Steps Required	41
3.7	Computational Implementation	42
3.8	Robin Boundary Conditions	45
3.8.1	The Weak Formulation	46
3.8.2	The Finite Element Solution	47
3.9	A Bound on the Accuracy of the Solution	47
3.10	Exercises.	49
4	Higher Order Basis Functions	55
4.1	A Model Differential Equation	55
4.2	Quadratic Basis Functions	56
4.2.1	The Mesh	56
4.2.2	The Definition of Quadratic Basis Functions.	57
4.2.3	The Finite Element Solution	60
4.2.4	The System of Algebraic Equations	60
4.2.5	Assembling the Algebraic Equations.	62
4.2.6	Computational Implementation	65
4.2.7	A Note on Using Quadrature for Higher Order Basis Functions	69
4.3	Cubic Basis Functions	69
4.3.1	The Mesh	70
4.3.2	The Definition of Cubic Basis Functions.	71
4.3.3	The Finite Element Solution	73
4.3.4	Assembling the Algebraic Equations.	74
4.4	General Basis Functions	75
4.4.1	The Mesh	76
4.4.2	Basis Functions	76
4.4.3	The Finite Element Solution	77
4.5	Convergence of the Finite Element Solution.	78
4.6	Exercises.	79

5	Nonlinear Boundary Value Problems	81
5.1	A First Example	81
5.1.1	The Weak Formulation	82
5.1.2	The Mesh, Basis Functions and Finite Element Solution	83
5.1.3	The Algebraic Equations	83
5.1.4	Assembling the Algebraic Equations	85
5.1.5	Computational Implementation	87
5.1.6	Calculation of the Jacobian Matrix	90
5.1.7	Numerical Approximation of the Jacobian Matrix	96
5.2	A General Nonlinear Boundary Value Problem	97
5.2.1	The Weak Formulation	97
5.2.2	The Nonlinear System of Algebraic Equations	98
5.3	Exercises.	100
6	Systems of Ordinary Differential Equations	103
6.1	A Model Problem.	103
6.2	The Weak Formulation.	104
6.3	The Mesh and Basis Functions.	105
6.4	The Finite Element Solution	106
6.5	The Algebraic Equations.	107
6.6	Assembling the Algebraic Equations	109
6.7	Computational Implementation	110
6.8	More General Linear Problems.	112
6.8.1	The Weak Formulation	113
6.8.2	The Finite Element Solution	114
6.9	Nonlinear Problems	115
6.10	Exercises.	117
7	Linear Elliptic Partial Differential Equations	119
7.1	A First Model Problem.	119
7.2	The Weak Formulation.	120
7.2.1	Sobolev Spaces in Two Dimensions	120
7.2.2	Deriving the Weak Formulation	121
7.3	The Mesh and Basis Functions.	122
7.3.1	A Mesh of Triangular Elements	122
7.3.2	Linear Basis Functions	125
7.4	Sets of Functions	128
7.5	The Finite Element Solution	129
7.6	The System of Algebraic Equations	130
7.6.1	Satisfying the Dirichlet Boundary Conditions	130
7.6.2	Using Suitable Test Functions.	130
7.6.3	The Linear System	131

7.7	Assembling the System of Algebraic Equations	132
7.7.1	Assembling the Entries Defined by Integrals	132
7.7.2	Setting the Entries Defined Explicitly	135
7.8	Evaluating the Solution at a Given Point	135
7.9	Computational Implementation	136
7.10	More Complex Geometries	139
7.11	Exercises	140
8	More General Elliptic Problems	143
8.1	A Model Problem	143
8.2	The Weak Formulation	144
8.3	The Mesh and Basis Functions	145
8.4	The Finite Element Solution	145
8.5	The Algebraic Equations	145
8.5.1	Satisfying the Dirichlet Boundary Conditions	146
8.5.2	Using Suitable Test Functions	146
8.5.3	The Linear System	147
8.6	Assembling the Algebraic Equations	147
8.6.1	Evaluating Integrals Over Ω	148
8.6.2	Evaluating Integrals Over $\partial\Omega_N$	149
8.6.3	Setting Entries Defined Explicitly	150
8.7	Quadrature Over Triangles	151
8.8	Computational Implementation	152
8.9	Exercises	158
9	Quadrilateral Elements	161
9.1	A Model Problem	161
9.2	The Weak Formulation	162
9.3	The Computational Mesh	162
9.4	Basis Functions	164
9.5	Sets of Functions	166
9.6	The Finite Element Formulation	166
9.7	The System of Algebraic Equations	167
9.8	Assembling the System of Algebraic Equations	168
9.8.1	Evaluating Integrals Over Ω	169
9.8.2	Evaluating Integrals Over Ω_N	171
9.8.3	Setting Entries Defined Explicitly	171
9.9	Quadrature	171
9.10	Exercises	172
10	Higher Order Basis Functions	175
10.1	The Model Boundary Value Problem and Weak Formulation	175
10.2	Quadratic Basis Functions on a Mesh of Triangular Elements	176

10.3	The Finite Element Solution	180
10.4	The Algebraic Equations.	180
10.5	Assembling the Algebraic Equations	181
	10.5.1 Evaluating Integrals Over Ω	181
	10.5.2 Evaluating Integrals Over Ω_N	183
	10.5.3 Setting Entries Defined Explicitly.	184
10.6	Exercises.	184
11	Nonlinear Elliptic Partial Differential Equations.	189
11.1	A Model Problem.	189
11.2	The Weak Formulation.	190
11.3	The Mesh and Basis Functions.	191
11.4	The Finite Element Solution	191
11.5	The Nonlinear System of Algebraic Equations	192
	11.5.1 Satisfying the Dirichlet Boundary Conditions	192
	11.5.2 Using Suitable Test Functions.	192
11.6	Assembling the Nonlinear System of Algebraic Equations	193
	11.6.1 Evaluating Integrals Over Ω	194
	11.6.2 Evaluating Integrals Over $\partial\Omega_N$	195
	11.6.3 Setting Entries Defined Explicitly	196
11.7	Exercises.	196
12	Systems of Elliptic Equations	197
12.1	A Model Problem.	197
12.2	The Weak Formulation.	198
12.3	The Mesh and Basis Functions.	199
12.4	The Finite Element Solution	199
12.5	The Algebraic Equations.	200
12.6	Exercises.	202
13	Parabolic Partial Differential Equations	203
13.1	A Linear Parabolic Partial Differential Equation	203
13.2	A Nonlinear Parabolic Equation	205
13.3	A Semi-implicit Discretisation in Time.	207
13.4	Exercises.	208
Appendix A: Methods for Solving Linear and Nonlinear Systems of Algebraic Equations.		211
Appendix B: Vector Calculus.		227
