2	Motivations	5
2.1	Small	5
2.2	Soft	7
2.3	Safe	9
3	Enabling Technologies	11
3.1	Elastomers	11
3.1.1	PDMS	11
3.1.2	Beneficial Properties	12
3.1.3	Shortcomings	15
3.1.4	Parylene	16
3.1.5	Parylene C	16
3.1.6	Shortcomings	17
3.2	Unconventional Soft Lithography	18
3.3	Deformable Building Blocks	23
3.3.1	Electrical Interface	23
3.3.2	Optical Interface	25
3.3.3	Sensors	28
3.3.4	Actuators	29
3.4	Bio-Inspiration and Bio-Mimicry	29
3.4.1	For Making Small Robots	30
3.4.2	For Small and Soft Robots	32
3.5	Shape Engineering	38
4	Soft Robotic Micro-Tentacle: A Case Study	39
4.1	Overview	39
4.2	Conception by Bio-Inspiration	41
4.3	Realization by Unconventional Shaping of PDMS	42

4.4	Spiraling by Shape Engineering	47
4.4.1	Hump-Enabled Spiraling	47
4.4.2	Theoretical Framework	48
4.4.3	Analysis of Hump Action	49
4.4.4	Experimental Validation	52
4.5	Addressing Motivations.....	53
4.5.1	S^1 : Small	53
4.5.2	S^2 : Soft	54
4.5.3	S^3 : Safe	55
4.6	Conclusion on Case Study	58
5	Current Progress	59
5.1	Overview	59
5.2	Building Blocks	60
5.2.1	Actuators	60
5.2.2	Sensors	65
5.2.3	End-Effectors	68
5.3	Mid-Level Integration.....	72
5.3.1	Integration with Microfluidics/Bio-MEMS.....	72
5.3.2	Integration with Optics	73
5.4	Microscale Autonomous Soft Machines	75
5.4.1	Microfluidic Feedback and Autonomy	75
5.4.2	Opto-Mechanical Feedback	76
6	Towards Full-Scale Integration and Beyond	79
6.1	Fully Integrated Microscale Soft Robots.....	79
6.2	Agenda 1: Get More from Nature	81
6.3	Agenda 2: Achieve Self-Sufficiency	86
6.4	Agenda 3: Refine Material and Fabrication Technologies	87
6.5	Target on Horizon: Embedded Intelligence	89
6.6	Targets over the Horizon.....	90
