

# Contents

## Part I Design

|   |    |
|---|----|
| <b>Investigation of Rolling Element Bearings Using Time Domain Features</b> .....   | 3  |
| Dániel Tóth, Attila Szilágyi and György Takács  |    |
| <b>Truck Floor Design for Minimum Mass and Cost Using Different Materials</b> .....   | 13 |
| Károly Jármái and József Farkas   |    |
| <b>Theoretical and Parametric Investigation of an Automobile Radiator</b> .....   | 27 |
| Máté Petrik, Gábor Szepesi, Károly Jármái and Betti Bolló   |    |
| <b>Past and Present: Teaching and Research in Vehicle Engines at the University of Miskolc</b> .....                          | 39 |
| Szilárd Szabó, Péter Bencs and Sándor Tollár  |    |
| <b>Alternating Current Hydraulic Drive the Possibility of Applying in the Automotive Industry</b> .....                       | 49 |
| Tamás Fekete  |    |
| <b>Comparative Destructive and Non-Destructive Residual Stress Measuring Methods for Steering Rack Bar Semi-Product</b> ..... | 59 |
| József Majtényi, Viktor Kárpáti, Márton Benke and Valéria Mertinger   |    |
| <b>Dynamical Modelling of Vehicle's Maneuvering</b> .....   | 69 |
| Ákos Cservenák and Tamás Szabó  |    |
| <b>Developing a Rotary Internal Combustion Engine Characterised by High Speed Operation</b> .....                             | 79 |
| László Dudás  |    |

|  |     |
|--|-----|
| <b>Simulation Methods in the Vehicle Noise, Vibration and Harshness (NVH)</b> . . . . .  | 91  |
| Károly Jálics  |     |
| <b>Optimal Damping of Random Excited Systems</b> . . . . .   | 99  |
| Ferenc Knopp   |     |
| <b>Application of Knowledge-Based Design in Computer Aided Product Development</b> . . . . .                                       | 109 |
| György Hegedűs   |     |
| <b>Elementary Calculations for Deflection of Circular Rings</b> . . . . .  | 115 |
| Géza Németh  |     |
| <b>Position- and Speed-Dependent, Power-Absorbing Hydraulic Cylinder with Mathematically Predictable Characteristics</b> . . . . . | 123 |
| Lajos Albrecht, Ferenc Mészáros, Szilárd Szabó and Balázs Barna  |     |
| <b>Part II Technology</b>  |     |
| <b>Utilization of the GD OES Depth Profiling Technique in Automotive Parts Analysis</b> . . . . .                                  | 135 |
| Tamás I. Török and Gábor Lassú   |     |
| <b>Analysis of Surface Topography of Diamond Burnished Aluminium Alloy Components</b> . . . . .                                    | 143 |
| Gyula Varga and Viktória Ferencsik   |     |
| <b>Investigation of Tyre Recycling Possibilities with Cracking Process</b> . . . . .   | 155 |
| Viktória Mikáczó, Andor Zsemberi, Zoltán Siménfalvi and Árpád Bence Palotás  |     |
| <b>Utilisation of Various Hydro-Carbon-Based Wastes by Thermo-catalytic Conversion</b> . . . . .                                   | 171 |
| Andor Zsemberi, Zoltán Siménfalvi and Árpád Bence Palotás  |     |
| <b>Development of Nitrided Selective Wave Soldering Tool with Enhanced Lifetime for the Automotive Industry</b> . . . . .          | 187 |
| Zsolt Sályi, Zsolt Veres, Péter Baumli and Márton Benke  |     |
| <b>The Effect of Tensile Strength on the Formability Parameters of Dual Phase Steels</b> . . . . .                                 | 197 |
| Gábor Béres and Miklós Tisza   |     |
| <b>Comparison of Two Laser Interferometric Methods for the Study of Vibrations</b> . . . . .                                       | 205 |
| Miklós Béres and Béla Paripás  |     |

|   |     |
|---|-----|
| <b>Deburring of Polymer and Metal Matrix Composites</b> . . . . .   | 217 |
| János Liska   |     |
| <b>The Past, Present and Future of the Training of Internal<br/>Combustion Engines at the Department of Energy Engineering<br/>of BME</b> . . . . . | 225 |
| Ákos Bereczky   |     |
| <b>Concept of a New Method for Helical Surface Machining<br/>on Lathe</b> . . . . .   | 235 |
| Dániel Kiss and Tibor Csáki   |     |
| <b>Part III Electrotechnics, Informatics</b>  |     |
| <b>Intelligent Transportation Systems to Support Production<br/>Logistics</b> . . . . .   | 245 |
| Péter Veres, Tamás Bányai and Béla Illés  |     |
| <b>A New Scheduling Software for Supporting Automotive<br/>Component Manufacturing</b> . . . . .  | 257 |
| Mónika Kulcsárné Forrai and Gyula Kulcsár   |     |
| <b>The Context Between the Shift of Average Demand<br/>and the Safety Stock of Purchased Parts</b> . . . . .  | 275 |
| János Korponai, Ágota Bányainé Tóth and Béla Illés  |     |
| <b>An Overview of Autonomous Intelligent Vehicle Systems</b> . . . . .  | 287 |
| Daniel Tokody, Imre János Mezei and György Schuster   |     |
| <b>Software Reliability of Complex Systems Focus for Intelligent<br/>Vehicles</b> . . . . .   | 309 |
| György Schuster, Daniel Tokody and Imre János Mezei   |     |
| <b>Usage of an Optical Flow Sensor in Robotics<br/>to Define Orientation</b> . . . . .  | 323 |
| Máté Koba, Roland Bartók and László Czap  |     |
| <b>Pose Determination for Autonomous Vehicle Control</b> . . . . .  | 333 |
| Ahmed Bouzid, József Vásárhelyi, Roland Bartók and László Czap  |     |
| <b>Description of a Method for the Handling of Customer<br/>Needs in Logistics</b> . . . . .  | 341 |
| Béla Illés, Róbert Skapinyecz and György Wagner   |     |
| <b>Sensorless Determination of Load Current of an Automotive<br/>Generator Applying Neuro-Fuzzy Methods</b> . . . . .                               | 355 |
| Csaba Blága   |     |

|   |     |
|---|-----|
| <b>Distributed CAN-Bus Based Driving Assistance System<br/>on Autonomous Vehicle</b> . . . . .                                  | 375 |
| Gergely Kovács and László Czap  |     |
| <b>Wall and Object Detection with FRI and Bayes-Classifier<br/>for Autonomous Robot</b> . . . . .                               | 383 |
| Roland Bartók, Ahmed Bouzid, József Vásárhelyi and Márton L. Kiss   |     |
| <b>Optimal Formation of Logistics Networks</b> . . . . .  | 391 |
| György Kovács, Zoltán Varga and Márk Mihalik  |     |
| <b>Part IV Welding</b>  |     |
| <b>Development of Complex Spot Welding Technologies<br/>for Automotive DP Steels with FEM Support</b> . . . . .                 | 407 |
| László Prém, Zoltán Bézi and András Balogh  |     |
| <b>A Lightweight Design Approach for Welded Railway<br/>Vehicle Structures of Modern Passenger Coach</b> . . . . .              | 425 |
| István Borhy and László Kovács  |     |
| <b>Challenges and Solutions in Resistance Welding of Aluminium<br/>Alloys—Dealing with Non Predictable Conditions</b> . . . . . | 439 |
| Jörg Eggers, Ralf Bothfeld and Thomas Jansen  |     |
| <b>High Cycle Fatigue Investigations on High Strength Steels<br/>and Their GMA Welded Joints</b> . . . . .                      | 453 |
| Ádám Dobosy, János Lukács and Marcell Gáspár  |     |
| <b>Toughness Examination of Physically Simulated S960QL HAZ<br/>by a Special Drilled Specimen</b> . . . . .                     | 469 |
| Marcell Gáspár, András Balogh and János Lukács  |     |
| <b>Innovation Methods for Residual Stress Determination<br/>for the Automotive Industry</b> . . . . .                           | 483 |
| Máté Sepsí, Dávid Cseh, Ádám Filep, Márton Benke<br>and Valéria Mertinger   |     |
| <b>Author Index</b> . . . . .   | 499 |
