## Part I Introduction and Classical Physics

<b>1</b>	<b>A Short Introduction to Field Theories and Variational Approach</b> . . . . .	3
1.1	What Is a Field Theory: A Naive View . . . . .	3
1.2	Equations of Motion . . . . .	6
1.2.1	Lagrangian Formalism . . . . .	6
1.2.2	The Variational Approach . . . . .	9
1.3	Field Equations and Variational Approach . . . . .	13
1.3.1	The Euler–Lagrange Equations for the Fields . . . . .	13
1.3.2	Poisson Equations from Variational Principles . . . . .	16
1.4	Exercises . . . . .	18
<b>2</b>	<b>The Geometrical Character of Physics Theories</b> . . . . .	23
2.1	A Scientific Theory as a Model . . . . .	24
2.2	Geometry and Physics: Tools for Modeling the Reality . . . . .	26
2.3	When Should a Scientific Theory Be Changed? . . . . .	28
<b>3</b>	<b>Fundamental Principles of Classical Physics</b> . . . . .	29
3.1	Principle of Covariance . . . . .	29
3.1.1	Euclidean Space . . . . .	30
3.1.2	Euclidean Space and Time . . . . .	34
3.1.3	Covariance Revisited . . . . .	35
3.1.4	Rotational Covariance . . . . .	38
3.2	Principle of (Galilean) Relativity . . . . .	43
3.2.1	Principle of Relativity as a “Kinematic” Covariance Principle . . . . .	44
3.3	Equivalence Principle . . . . .	47
3.3.1	Equivalence Principle as a “Dynamic” Covariance Principle . . . . .	49
3.4	Exercises . . . . .	51

<b>4</b>	<b>Classical Physics, Fundamental Principles, and Lagrangian Approach</b> . . . . .	57
4.1	Equations of Motion and Newtonian Gravitational Force. . . . .	57
4.2	Euler–Lagrange Equations . . . . .	59
4.3	Lagrangian of a Free Particle and Variational Principles . . . . .	62
4.4	Field Theories and Variational Approach:	
	A “Not-so-Naive” View . . . . .	64
4.4.1	Variational Approach and Field Equations: General Review . . . . .	69
4.4.2	Newtonian Lagrangians: Poisson Equation and Its Extension . . . . .	70
4.5	Classical Electromagnetism . . . . .	72
	<b>Part II Special Relativity</b>	
<b>5</b>	<b>Special Relativity Setting Up</b> . . . . .	79
5.1	Principle of Relativity Revisited. . . . .	79
	5.1.1 Generalized “PoR-Aware” Transformations . . . . .	80
	5.1.2 Galilean and Lorentz Transformations . . . . .	84
5.2	Experimental Footing of Special Relativity . . . . .	86
5.3	Basic Principles of Special Relativity and Relativistic Dynamics. . . . .	88
5.4	Lorentz Transformations from a Geometrical Point of View . . . . .	94
	5.4.1 The Physical Meaning of Covariance . . . . .	94
	5.4.2 Lorentz-Invariant Quantities and Measurements . . . . .	95
	5.4.3 Spacetime, Four-Dimensional Hyperbolic Geometry, and Manifest Lorentz Covariance . . . . .	97
	5.4.4 Minkowski Geometry . . . . .	100
5.5	Exercises . . . . .	103
<b>6</b>	<b>Special Relativity in Minkowskian Spacetime</b> . . . . .	115
6.1	Kinematics . . . . .	116
6.2	Dynamics. . . . .	120
6.3	Lagrangian Formulation . . . . .	126
	6.3.1 Free Particles . . . . .	128
	6.3.2 General Free Particles’ Dynamics and Local Gauge Freedom . . . . .	130
	6.3.3 Particle Dynamics Under the Influence of a Scalar Field . . . . .	134
	6.3.4 Field Equations. . . . .	136
6.4	Exercises . . . . .	138

<b>7</b>	<b>Gravity and Special Relativity</b> . . . . .	143
7.1	Gravity as a Lorentz-Invariant Scalar Field . . . . .	143
7.1.1	Equivalence Principle and “Geometrization” of Gravity . . . . .	144
7.1.2	Particle Orbit and Perihelion Shift . . . . .	147
7.2	Relativistic Gravity Sources: The Stress-Energy Tensor and the Equivalence Principle . . . . .	150
7.3	Gravity Potential as a Nonscalar Relativistic Field . . . . .	154
7.4	Equivalence Principle and Special Relativity: Accelerated Frames . . . . .	155
7.5	Exercises . . . . .	160
 <b>Part III General Relativity and Beyond</b>		
<b>8</b>	<b>Lagrangian Formulation of General Relativity</b> . . . . .	167
8.1	Gravity and Geometry: Curved Spacetime and General Covariance . . . . .	167
8.2	The Geodesic Equations . . . . .	173
8.2.1	General Covariant Geodesic Equations . . . . .	174
8.2.2	Classical Limit of the Geodesic Equations . . . . .	178
8.3	Field Equations of General Relativity . . . . .	180
8.3.1	Derivation of the Field Equations . . . . .	183
8.3.2	Classical Limit of Field Equations . . . . .	187
8.4	An Alternative Formulation: The Palatini Approach . . . . .	189
8.5	Exercises . . . . .	192
<b>9</b>	<b>Applications</b> . . . . .	199
9.1	The Schwarzschild Solution of Field Equations . . . . .	199
9.1.1	Pericenter Advance . . . . .	203
9.1.2	Light Deflection . . . . .	206
9.2	Linearized Gravity and Gravitational Waves . . . . .	208
9.3	The Post-Newtonian Limit of General Relativity . . . . .	212
9.4	Cosmology . . . . .	218
9.4.1	The Cosmological Principle and the Friedmann–Lemaître–Robertson–Walker Metric . . . . .	219
9.4.2	Friedmann Equations . . . . .	224
9.4.3	Standard Cosmological Models . . . . .	227
9.5	Exercises . . . . .	231
<b>10</b>	<b>Beyond General Relativity</b> . . . . .	239
10.1	General Relativity Beyond General Relativity . . . . .	240
10.1.1	The Cosmological Constant: Einstein Versus General Relativity . . . . .	241
10.1.2	Exotic Matter Lagrangians . . . . .	244

- 10.2 Beyond the Metric Tensor . . . . . 249
  - 10.2.1 Mach’s Principle . . . . . 250
  - 10.2.2 Mach’s Principle and General Relativity . . . . . 252
  - 10.2.3 Mach’s Principle and Scalar-Tensor Theories . . . . . 254
- 10.3 Going Beyond in Different Ways . . . . . 257
  - 10.3.1 Beyond the Einstein–Hilbert Action . . . . . 258
  - 10.3.2 Beyond Spacetime . . . . . 260
- 10.4 A Mathematical Tool for Testing Gravity Theories:  
The Parametrized Post-Newtonian Formalism . . . . . 261
  - 10.4.1 The PPN Formalism in a Nutshell . . . . . 262
  - 10.4.2 The Weak-Field Approximation of the Brans–Dicke  
Theory and Its PPN parameters . . . . . 265
- 10.5 Exercises . . . . . 266
- Appendix A: Functionals and Calculus of Variations . . . . . 273**
- Appendix B: Tensor Algebra in Euclidean Geometry . . . . . 281**
- Appendix C: Special Relativity . . . . . 301**
- Appendix D: Elements of Differential Geometry . . . . . 331**
- References . . . . . 351**
- Index . . . . . 359**
