Contents

1 Introduction ................................................................. 1
  1.1 Overview ............................................................. 1
  1.2 Rationale ............................................................. 2
    1.2.1 Input–Output Analysis ....................................... 2
    1.2.2 Consumption-Based Accounting ............................. 3
    1.2.3 Rapid Development in MRIO Databases, Coverage and Availability ............................................. 4
    1.2.4 Understanding Difference and Uncertainty ............... 5
    1.2.5 The Need for Further Research .............................. 6
  1.3 Aims and Research Themes .......................................... 7
  1.4 Organisation of This Book .......................................... 9
  References ......................................................................... 12

2 Literature Review .......................................................... 15
  2.1 A Brief Overview of Input–Output Techniques .................... 15
    2.1.1 Environmentally-Extended Input–Output Analysis ........ 18
    2.1.2 Understanding Trade in Input–Output Analysis .......... 19
  2.2 MRIO Construction ..................................................... 25
    2.2.1 Data Requirements to Extend IO to Consider Global Trade ......................................................... 26
    2.2.2 Preparation of Data for MRIO ................................. 27
  2.3 Data Sources and Construction of Current MRIO Systems ...... 30
    2.3.1 GTAP MRIO ........................................................ 30
    2.3.2 WIOD MRIO ...................................................... 33
    2.3.3 Eora MRIO ......................................................... 35
    2.3.4 Comparing the Source Data, Structure and Construction of Eora, GTAP and WIOD .......................... 36

4 Using Matrix Difference Statistics to Compare MRIO Databases

4.1 Overview ........................................... 93
4.2 Creation of Concordance Matrices ......................... 94
4.3 A Comparison of Monetary Output Using Original
and Aggregated MRIO Databases ........................... 96
4.3.1 Country Level Results ........................... 97
4.4 A Comparison of Consumption-Based Emissions
Using Original and Aggregated MRIO Databases .......... 99
4.4.1 Which Sectors Contribute to the Difference? .......... 100
4.4.2 Country Level Consumption-Based Accounts .......... 104
4.4.3 Country Level CBA Matrix Difference Results ....... 104
4.5 Matrix Comparisons Between Aggregated Matrices ....... 107
4.6 A Comparison of the Monetary Data in Different
MRIO Databases .......................................... 107
4.6.1 Final Demand .................................... 108
4.6.2 Inter-industry Transactions ........................ 111
4.6.3 Domestic and Imports Sections of Z and y .......... 112
4.6.4 Total Monetary Output ............................ 113
4.7 A Comparison of the Emissions Data in Different
MRIO Databases .......................................... 115
4.7.1 Emissions by Industry ............................ 115
4.7.2 Emissions Intensity ............................. 118
4.7.3 Emissions Multipliers ............................. 118
4.7.4 Total Emissions ................................ 119
4.8 Which Database Pairing Is Most Similar? ................... 119
4.9 Outcomes ........................................... 122
4.9.1 Aggregated Systems as a Proxy for More
Detailed Versions ........................................ 122
4.9.2 Difference Statistics to Aid Error Checking ............ 122
4.9.3 Correlation and Distance .......................... 123
4.9.4 Relating Findings to the Source Data
and Build Technique .................................... 123
4.10 Summary ........................................... 124
References ................................................ 126
5 Using Decomposition Techniques to Determine Cause of Difference in MRIO Databases

5.1 Overview ........................................... 127

5.2 Understanding the Effect of Different Source Data ............ 128
   5.2.1 Structural Decomposition Equations Used. ............ 128
   5.2.2 Consumption-Based Emissions Variation Between MRIO Databases. ......................... 130
   5.2.3 Interpreting the Results ......................... 132

5.3 Understanding the Effect of Different Build Methods .......... 140
   5.3.1 Difference Equations the Effect of Domestic Versus Imports .................... 140
   5.3.2 Interpreting the Results ......................... 141

5.4 Aggregated Databases Used for SPD .......................... 144

5.5 Structural Path Decomposition Equations Used .................. 144

5.6 A Structural Path Analysis—US Case Study .................. 146

5.7 Structural Path Decomposition ............................ 149

5.8 Global Results ....................................... 152
   5.8.1 How Often Does a Particular Database Contain the Larger of the Two Paths? .................... 152
   5.8.2 What Orders of Paths Make up the Top 100 Path Differences? .................... 153
   5.8.3 What Is the Frequency Distribution by Size of Path Difference? .................... 153
   5.8.4 Are There Particular Countries that Tend to Produce Large Path Differences? .................... 155
   5.8.5 Are There Particular Sectors that Tend to Produce Large Path Differences? .................... 155
   5.8.6 Are There Particular Elements Within the Taylor’s Equation that Tend to Be Responsible for Most of the Difference Between Paths? .................... 156
   5.8.7 What Are the Characteristics of Paths Where the Emissions or the Monetary Data Contribute Most to the Difference? .................... 157

5.9 Outcomes ........................................... 159
   5.9.1 Building on the Findings of the Matrix Difference Statistics ............................ 159
   5.9.2 Domestic Value Chains ............................ 159
   5.9.3 Sources of Difference from the Emissions Vector ............................ 160
   5.9.4 Sources of Difference from the Monetary Data ............................ 160
   5.9.5 Using Aggregated Data ............................ 162
   5.9.6 SPD as a Tool for Identifying Difference ............................ 163

5.10 Summary ........................................... 163

References. ........................................... 165
6 Discussion .................................................. 167
6.1 Summary of Findings ..................................... 167
6.1.1 RT1: Calculating the Difference in the CO₂ CBA .... 167
6.1.2 RT2: Identifying the Differences in the Data Sources, Database Structures and Construction Techniques Used by Each Database ............... 168
6.1.3 RT3: Investigating the Effect of the Choice of Sector Aggregation on the CO₂ CBA ......................... 169
6.1.4 RT4: Determining Whether the Results Produced by Each Database Are Statistically Similar to Each Other ........................................ 170
6.1.5 RT5: Discovering Why the Different MRIO Databases Give Different Results .................................. 170
6.1.6 RT6: Exploring What These Findings Mean for the Future of MRIO Development and Its Use in a Policy Context ................................... 172
6.2 Future Development of MRIO Databases ............... 172
6.2.1 Data Sources and Structure ......................... 172
6.2.2 Construction Techniques .............................. 175
6.2.3 Harmonisation or Specialisation .................... 178
6.3 Future Use of MRIO Outcomes in Policy Analysis ....... 179
6.3.1 Application at Different Scales ..................... 179
6.3.2 Choice of Model for Extended Analysis ............ 180
References .................................................. 182

7 Conclusion .................................................. 185
7.1 The Overarching Aim ..................................... 185
7.2 Contribution to the Knowledge Base .................... 186
7.2.1 Presentation of the Difference in MRIO Database Philosophy and Outcome .................................. 186
7.2.2 Development of New Data to Allow Comparisons to be Made ............................................. 186
7.2.3 Quantification of the Effect of Construction Choices on CBA Differences ............................ 186
7.2.4 Development of New Techniques for Calculating and Communicating Difference .................... 187
7.3 Limitations of the Study .................................. 188
7.3.1 Limited Data Compared .............................. 188
7.3.2 Large Volume of Results ............................. 188
7.3.3 Findings Based on Aggregated Data ................. 188
7.3.4 Dependency Effect in SPA and SPD ................ 189
7.4 Future Research ............................................ 189
7.4.1 Wider Scope ......................................... 189
7.4.2 Explore Additional Comparison Techniques ....... 190
Techniques for Evaluating the Differences in Multiregional Input-Output Databases
A Comparative Evaluation of CO2 Consumption-Based Accounts Calculated Using Eora, GTAP and WIOD
Owen, A.
2017, XXII, 217 p. 44 illus. in color., Hardcover
ISBN: 978-3-319-51555-7
