1	Introduction	1
1.1	Medical Background and Requirements	1
1.2	BCI Systems	3
1.3	EMG-Based Neuromuscular Interface	9
1.4	Human-Robot Interaction Control	13
1.5	Summary	15
	References	16
2	State of the Art	19
2.1	EEG-Based BCI and Its Challenges	19
2.1.1	Steady State Visual Evoked Potentials	19
2.1.2	EEG Signal Processing: Improving the SNR	22
2.1.3	EEG Signal Processing: Signal Translation and Classification	25
2.1.4	Current Limitations	29
2.2	EMG and the Neuromuscular Interface	30
2.2.1	Applications of sEMG	31
2.2.2	sEMG-Based Neuromuscular Interface	34
2.2.3	Current Challenges	35
2.3	Neuromusculoskeletal Models for Gait Rehabilitation	37
2.3.1	Musculoskeletal Model	37
2.3.2	EMG-Driven Models	39
2.4	Discussion	42
2.5	Summary	43
	References	44
3	Signal Processing Methods for SSVEP-Based BCIs	51
3.1	Introduction	51
3.2	Adjacent Narrow Band Filter (ANBF) Algorithm	54
3.2.1	Artefact Reduction	54

3.2.2	Frequency Recognition Strategy	56
3.3	Methods and Materials.	57
3.3.1	Experimental Protocol.	57
3.3.2	EEG Recording and Evaluation	58
3.4	Results	60
3.5	Discussion	64
3.6	Summary	65
	References	66
4	SSVEP-Based BCI for Lower Limb Rehabilitation	69
4.1	Introduction	69
4.2	Methods and Materials.	71
4.2.1	Subjects and Visual Stimulator	71
4.2.2	SSVEP Signal Processing	72
4.2.3	Robotic Exoskeleton Device	74
4.2.4	Experimental Protocols	75
4.2.5	Control Algorithm	79
4.3	Results	80
4.4	Discussion	83
4.5	Summary	84
	References	84
5	A Hybrid BCI for Gaming	87
5.1	Introduction	87
5.2	BCI Setup	89
5.2.1	Signal Recording and Processing	89
5.2.2	Super Street Fighter Video Game	94
5.3	Experimental Method and Results	96
5.3.1	Experimental Protocol.	96
5.3.2	Results	97
5.4	Discussion	98
5.5	Summary	99
	References	100
6	EMG-Driven Physiological Model for Upper Limb	103
6.1	Neuromusculoskeletal Model	103
6.1.1	Musculoskeletal Geometry Model.	104
6.1.2	Musculotendon Model	108
6.1.3	Kinematic Model	109
6.2	Model Sensitivity Analysis	111
6.2.1	Model Parameters	111
6.2.2	Sensitivity Analysis	112
6.2.3	Results and Discussion	113
6.3	Elbow Physiological Model Validation	115
6.3.1	Experimental Setup.	117

- 6.3.2 Model Validation 119
- 6.4 Summary 122
- References 123
- 7 Exoskeleton Control Based on Neural Interface 125**
 - 7.1 Exoskeleton Development 125
 - 7.2 Exoskeleton Control. 130
 - 7.2.1 Control System Design. 130
 - 7.2.2 Control of the Elbow Joint 132
 - 7.3 Human-Robot Interface 134
 - 7.3.1 Interface Design and Parameter Tuning 134
 - 7.3.2 Graphical User Interface 135
 - 7.4 Summary 141
 - References 141
- 8 Muscle Force Estimation Model for Gait Rehabilitation 143**
 - 8.1 Patient-Specific Muscle Force Estimation 143
 - 8.1.1 Patient-Specific Musculoskeletal Model 144
 - 8.1.2 Inverse Dynamic Modelling 144
 - 8.1.3 Static Optimisation 147
 - 8.2 PMFE Evaluation and Results 147
 - 8.2.1 PMFE Evaluation 148
 - 8.2.2 Simulation Results 149
 - 8.2.3 Discussion 150
 - 8.3 Human-Inspired Robotic Exoskeleton 152
 - 8.4 Biological Command Based Controller 153
 - 8.4.1 Dynamic Modelling 154
 - 8.4.2 Patient-Specific Muscle Force Estimation 155
 - 8.4.3 PMFE Based Feedforward Controller 156
 - 8.5 PSBc Evaluation and Results 157
 - 8.5.1 Computer Simulation and Results. 158
 - 8.5.2 Robot Experiments and Results 160
 - 8.5.3 Discussion 162
 - 8.6 Summary 164
 - References 164
- 9 Neuromuscular Model for Gait Rehabilitation 167**
 - 9.1 Patient-Specific EMG-Driven Neuromuscular Model. 167
 - 9.1.1 The Patient-Specific Musculoskeletal Model. 168
 - 9.1.2 Muscle Kinematics 170
 - 9.1.3 EMG-Torque Modelling 170
 - 9.1.4 Global Optimisation Based on Simulink-M 173
 - 9.2 Sensitivity Analysis and Model Evaluation 174
 - 9.2.1 Sensitivity Analysis of MT Parameters to Joint
Torque 174

9.2.2	Model Evaluation of the PENm	176
9.2.3	Discussion	176
9.3	Clinical Evaluation of Neuromuscular Model	179
9.3.1	Experimental Evaluation	179
9.3.2	Experiment Protocol	180
9.3.3	Data Processing	181
9.3.4	Discussion	186
9.4	Summary	187
	References	188
10	Conclusions and Future Prospects.	191
10.1	Book Contributions	191
10.1.1	Effective Brain Computer Interface	191
10.1.2	EMG-Driven Physiological Model	193
10.1.3	Neuromusculoskeletal Model for Gait.	195
10.2	Outlook and Future Prospects	197
10.2.1	Future BCIs	197
10.2.2	Neuromuscular Interfaces	198
10.2.3	Neuromuscular Models.	200
10.3	Summary	201
	References	201
