

# Contents

<b>1</b>	<b>Network Role Mining and Analysis: An Overview . . . . .</b>	1
1.1	Introduction . . . . .	1
1.2	Defining Roles . . . . .	2
1.2.1	Networks . . . . .	3
1.2.2	Positions in Networks . . . . .	5
1.3	Mining Roles . . . . .	6
1.3.1	Relationship to Graph Partitioning and Community Detection . . . . .	10
1.4	Purpose and Outline of This Monograph . . . . .	11
References . . . . .		11
<b>2</b>	<b>Implied Role Mining . . . . .</b>	15
2.1	Introduction . . . . .	15
2.2	The Implied Role Mining Process . . . . .	17
2.3	Illustrations with Usenet . . . . .	18
2.3.1	Golder et al.'s Taxonomy . . . . .	19
2.3.2	Nolker et al.'s Hierarchy . . . . .	22
2.4	Analysis of Implied Role Mining . . . . .	25
2.4.1	Qualitative Nature . . . . .	25
2.4.2	Compatibility . . . . .	26
2.4.3	Simplicity and Interpretability . . . . .	27
2.5	Conclusion . . . . .	29
References . . . . .		30
<b>3</b>	<b>Equivalence-Based Role Mining . . . . .</b>	31
3.1	Introduction . . . . .	31
3.2	Structural Equivalence . . . . .	32
3.2.1	Finding Structural Equivalences . . . . .	32

3.3	Automorphic Equivalence . . . . .	34
3.3.1	Finding Automorphic Equivalences . . . . .	35
3.3.2	Quantifying Automorphic Similarity . . . . .	37
3.4	Regular Equivalence . . . . .	40
3.4.1	Finding Regular Equivalences . . . . .	40
3.4.2	Quantifying Regular Similarity . . . . .	45
3.5	Conclusion . . . . .	46
	References . . . . .	46
<b>4</b>	<b>Deterministic Blockmodeling</b> . . . . .	49
4.1	Introduction . . . . .	49
4.2	The Blockmodeling Framework . . . . .	52
4.2.1	Similarity Measures . . . . .	52
4.2.2	Blocktypes . . . . .	56
4.3	Goodness of Fit . . . . .	58
4.3.1	A Goodness-of-Fit Measure for Positional Analysis . . . . .	59
4.3.2	A Goodness-of-Fit Measure for Network Compression . . . . .	60
4.4	Conclusion . . . . .	60
	References . . . . .	61
<b>5</b>	<b>Stochastic Blockmodeling</b> . . . . .	63
5.1	Introduction . . . . .	63
5.2	SBM Specification . . . . .	64
5.3	The Infinite Relational Model . . . . .	65
5.3.1	Parameter Inference for the IRM . . . . .	67
5.3.2	Summary . . . . .	70
5.4	The Dynamic Stochastic Blockmodel . . . . .	70
5.4.1	DSBM Network Generation . . . . .	71
5.4.2	Parameter Inference for the DSBM . . . . .	73
5.5	Conclusion . . . . .	75
	References . . . . .	75
<b>6</b>	<b>Advanced Computational Methods</b> . . . . .	77
6.1	Factor Graphs: The Social Roles and Statuses Factor Graph Model . . . . .	78
6.1.1	Social Features . . . . .	79
6.1.2	A Factor Graph Model . . . . .	80
6.2	Multi-view Learning: Dual-View Uncertainty Regularization . . . . .	82
6.2.1	Graph Co-regularization . . . . .	83
6.2.2	Uncertainty Regularization and Objective Function . . . . .	84
6.3	Bayesian Modeling: Co-discovery of Roles in Communities . . . . .	85
6.4	Matrix Factorization: RolX . . . . .	87

<b>6.5 Iterative Quadratic Programming: Synergistic Co-discovery of Communities and Roles . . . . .</b>	<b>89</b>
6.5.1 Initializing Communities (InitCom) . . . . .	90
6.5.2 Initializing Roles (InitRole) . . . . .	90
6.5.3 Updating Communities . . . . .	91
6.5.4 Updating Roles . . . . .	92
6.6 Conclusion . . . . .	92
References . . . . .	93
<b>7 Concluding Remarks . . . . .</b>	<b>95</b>
7.1 Emerging Trends in Role Mining . . . . .	96
7.2 Tension Between Rigor and Interpretability . . . . .	98
References . . . . .	100
