## Contents

### Part I  Introduction to Diabetes, Obesity and Medicinal Plants

1  **Introduction to Diabetes and Obesity**  ........................................ 3  
   1.1 Introduction .............................................................................. 3  
   1.2 Diabetes ................................................................................. 5  
   1.3 Exercise as a Physiological Mechanism Countering Insulin Resistance .............................................................................. 7  
   1.4 Distributed Control of Blood Glucose ......................................... 8  
   1.5 Signaling Mechanisms Regulating Glucose Uptake ....................... 8  
   1.6 Antidiabetic Plant-Derived Drugs ............................................. 9  
   1.7 Obesity ..................................................................................... 10  
   1.8 Diabesity: The Correlation of Obesity and Diabetes ..................... 16  
   References ..................................................................................... 17  

2  **Introduction to Medicinal Plant Safety and Efficacy**  ......................... 21  
   2.1 Introduction .............................................................................. 21  
   2.2 Historical Aspects ...................................................................... 23  
   2.3 Revival of Interest in Phytomedicine .......................................... 27  
   2.4 The Status of Herbal Medicine in the Mediterranean .................... 28  
   2.5 Safety of Herbal Medicines ....................................................... 29  
   2.6 Safety Monitoring and Regulatory Status of Herbal Medicines .......... 31  
   2.7 Herbal Active Compounds .......................................................... 33  
   2.8 Structure and Classification Secondary Metabolites ..................... 34  
   2.9 Synergistic Actions of Phytomedicines ........................................ 38  
   2.10 Preparation Techniques and Administration Form of Herbal Medicines ......................................................... 39  
   2.11 Therapeutic Properties of Herbal-Based Active Compounds .......... 41  
   2.12 Examples of Herbal Compounds and Their Pharmacological Properties .............................................................................. 49  
   References ..................................................................................... 53
Part II  Safety, Efficacy, and Action Mechanisms of Anti-obesity Medicinal Plants

3 Anti-obesity Medicinal Plants ..................................................... 59
   3.1 Introduction ................................................................. 59
   3.2 Appetite Regulation ....................................................... 60
   3.3 Enzymes Inhibition ......................................................... 63
   3.4 Inhibitors of Adipogenesis and Adipogenic Factors ................. 68
   3.5 Stimulators of Thermogenesis ............................................ 71
   3.6 Increase Satiety ............................................................ 71
   3.7 Commonly Used Anti-obesity Medicinal Plants ....................... 73
   References ................................................................. 89

4 Prevention and Treatment of Obesity-Related Diseases by Diet and Medicinal Plants ............ 95
   4.1 Introduction ................................................................. 95
   4.2 Strategy to Prevent Inflammatory Responses in Obese Adipose Tissues by Medicinal Plants and Phytochemicals ......................................................... 97
      4.2.1 Medicinal Plant Diets That Act Through PPARγ-Dependent Pathways ........................................ 101
      4.2.2 Medicinal Plant Diets That Act Through PPARγ-Independent Pathways ........................................ 105
   4.3 Medicinal Plants and Phytochemical-Based Strategies to Prevent Obesity-Related Hypertension ............. 114
   4.4 The Mediterranean Diet .................................................. 118
   References ................................................................. 124

5 Herbal-Derived Anti-obesity Compounds and Their Action Mechanisms .................................. 129
   5.1 Introduction ................................................................. 129
   5.2 Phytochemical Compounds Used for the Treatment of Obesity ......................................................... 132
   5.3 Major Basic Anti-obesity Mechanisms .................................. 133
   5.4 Targeting Adipose Tissue .................................................. 136
   References ................................................................. 141

Part III  Safety, Efficacy, and Action Mechanisms of Anti-diabetes Medicinal Plants

6 Antidiabetic Medicinal Plants .................................................... 147
   6.1 Introduction ................................................................. 147
   6.2 Herbal-Based Diabetes Mellitus Remedies .............................. 148
   6.3 Plant Mixtures Used in The Treatment of Diabetes .................. 164
   6.4 Antidiabetic Phytochemicals .............................................. 165
   References ................................................................. 167
7 Antidiabetic Medicinal Plants and Their Mechanisms of Action
  7.1 Introduction ......................................................... 175
  7.2 Strategies for the Glycemic Control .............................. 179
  7.3 Antidiabetic Medicinal Plants and Their Mechanisms of Action
    7.3.1 Increased Pancreatic Secretion of Insulin: Augmentation of
         the Pancreas and Increased Insulin Sensitivity. .............. 182
    7.3.2 Inhibition of Glucose Production in the Liver .............. 187
    7.3.3 Enhanced Glucose Uptake in the Muscle and Adipose Tissues
         .................................................................. 190
    7.3.4 Inhibition of Glucose Absorption .............................. 195
    7.3.5 Inhibition of Diabetes-Related Complications ............... 199
References ......................................................................... 206

Part IV Polyherbal Formulations Used in the Prevention/Treatment of Obesity and Diabetes
8 Hypoglycemic and Anti-obesity Polyherbal Mixtures................. 217
  8.1 Introduction ............................................................ 217
  8.2 The Concept of Synergistic Effects in the Main Traditional Medical Systems ................................................. 220
  8.3 Synergistic Actions of Phytochemicals and Their Action Mechanisms .............................................................. 226
  8.4 Clinical and Experimental Studies on Hypoglycemic and Anti-obesity Effects of Herbal Formulations ....................... 228
  8.5 Commonly Used Herbs in Polyherbal Mixtures .................... 238
  8.6 Food Synergy: Diabetes Preventive Components in the Mediterranean Diet ......................................................... 242
  8.7 Honey: A Natural Polyherbal Formula ............................. 245
References ......................................................................... 247

Index ................................................................................ 253
Anti-diabetes and Anti-obesity Medicinal Plants and Phytochemicals
Safety, Efficacy, and Action Mechanisms
Saad, B.; Zaid, H.; Shanak, S.; Kadan, S.
2017, XIV, 257 p. 55 illus., 53 illus. in color., Hardcover
ISBN: 978-3-319-54101-3
