|----------|--|----------|
| 1 | Nonlinear Dynamics and Chaos: Applications in Meteorology and Atmospheric Physics | 1 |
| 1.1 | Introduction | 1 |
| 1.2 | New Science of Nonlinear Dynamics and Chaos | 2 |
| 1.2.1 | Dynamical Systems and Fractal Space-Time Fluctuations | 2 |
| 1.2.2 | Fractals in Pure Mathematics | 4 |
| 1.2.3 | Fractal Fluctuations and Statistical Analysis | 7 |
| 1.2.4 | Golden Mean and Self-similar, <i>Fractal</i> Geometrical Structures in Nature | 8 |
| 1.2.5 | <i>Fibonacci</i> Sequence and Self-similar Structures | 9 |
| 1.2.6 | Fivefold and Spiral Symmetry Associated with <i>Fibonacci</i> Sequence | 11 |
| 1.2.7 | Quasicrystalline Structure: The Quasiperiodic Penrose Tiling Pattern | 13 |
| 1.2.8 | <i>Fractal</i> Time Signals, and Power Laws | 14 |
| 1.2.9 | Self-organized Criticality: Space-Time <i>Fractals</i> | 16 |
| 1.2.10 | Turbulent (Chaotic) Fluctuations and Self-similar Structure Formation | 17 |
| 1.2.11 | Self-similarity: A Signature of Identical Iterative Growth Process | 19 |
| 1.3 | Fractals and Self-organized Criticality in Meteorology and Atmospheric Physics | 19 |
| 1.3.1 | Observed Structure of Atmospheric Flows and Signatures of Deterministic Chaos | 21 |
| 1.3.2 | Limitations of Conventional Atmospheric Boundary Layer (ABL) Models | 22 |
| 1.3.3 | Traditional Numerical Weather Prediction, Deterministic Chaos and Predictability | 23 |

- 1.3.4 Current Techniques in Numerical Weather Prediction (NWP): Major Drawbacks 26
- 1.4 Applications of Nonlinear Dynamics and Chaos for Weather Prediction: Current Status 28
 - 1.4.1 Space-Time Cascade Model for Fractal Fluctuations in Atmospheric Flows 30
 - 1.4.2 General Systems Theory for Fractal Space-Time Fluctuations in Atmospheric Flows 31
- 1.5 Conclusions 32
- References. 33
- 2 Noise or Random Fluctuations in Physical Systems: A Review 41**
 - 2.1 Introduction 42
 - 2.2 Statistical Methods for Data Analysis 43
 - 2.3 Statistical Normal Distribution 43
 - 2.4 Power Laws—History 45
 - 2.5 Power-Law Distributions and Complex Systems. 46
 - 2.6 Power Laws, Scale Invariance and Self-similarity. 47
 - 2.7 Power Laws, Self-similarity, and Fractals 48
 - 2.8 Power Laws, $1/f$ Noise, and Long-Term Memory 49
 - 2.9 Power Laws, Phase Transitions, and Critical Phenomena 50
 - 2.10 Power Laws and Self-organized Criticality 52
 - 2.11 Current Status of Power-Law Distributions. 53
 - 2.12 Power-Law Relations (Bivariate) and Power-Law (Probability) Distributions 54
 - 2.13 Allometric Scaling and Fractals 54
 - 2.14 Fractals and the Golden Section in Plant Growth 55
 - 2.15 Turbulent Fluid Flow Structure, Fractals, and the Golden Ratio 56
 - 2.16 Fractal Space-Time and the Golden Section 56
 - 2.17 Power-Law (Probability) Distributions in Meteorological Parameters 57
 - 2.17.1 Power-Law (Probability) Distributions in Precipitation 59
 - 2.17.2 Power-Law (Probability) Distributions in Temperature 62
 - 2.17.3 Power-Law (Probability) Distributions in Quaternary Ice Volume Fluctuations 63
 - 2.17.4 Power-Law (Probability) Distributions in Atmospheric Pollution 63
 - 2.18 General Systems Theory Model for Self-organized Criticality in Atmospheric Flows. 63
 - References. 66

Self-organized Criticality and Predictability in
Atmospheric Flows

The Quantum World of Clouds and Rain

Selvam, A.M.

2017, XIX, 139 p. 24 illus., Hardcover

ISBN: 978-3-319-54545-5
