1	Introduction	1
1.1	Quantum Feedback Control: A Brief History	3
1.2	Classical Linear Systems and Control Theory	6
1.2.1	Classical Linear Systems	6
1.2.2	Linear Systems and Control Theory	8
1.2.3	Toward Systems and Control Theory for Linear Quantum Systems	10
1.3	Closed Linear Quantum Systems	11
1.4	Open Quantum Systems, the Markov Approximation, and Quantum Langevin Equations	12
1.4.1	Open Quantum Systems	12
1.4.2	Illustration of the Markov Approximation and Markov Open Quantum System Dynamics	13
1.5	Linear Dynamical Quantum Systems: Description and Physical Examples	16
1.5.1	Optical Cavities	17
1.5.2	Non-degenerate Optical Parametric Amplifiers	19
1.5.3	Degenerate Parametric Amplifiers/Optical Parametric Oscillators	23
1.5.4	Opto-mechanical Systems	25
1.5.5	Large Atomic Ensemble	27
	References	29
2	Mathematical Modeling of Linear Dynamical Quantum Systems	35
2.1	Quantum Stochastic Calculus	36
2.1.1	The Boson Fock Space, Exponential Vectors, and Fundamental Processes on the Fock Space	36
2.1.2	Adapted Processes and Quantum Stochastic Integrals	37
2.1.3	The Quantum Itô Table in Vacuum and the Quantum Itô Rule	39

2.1.4	The Hudson–Parthasarathy Quantum Stochastic Differential Equation	40
2.2	Linear Dynamical Quantum Systems: Joint Unitary Evolution of Oscillators and Boson Fields	43
2.3	Equations of Motion: Real Quadrature Form and Complex Mode Form.	44
2.3.1	Real Quadrature Form.	45
2.3.2	Complex Mode Form	46
2.3.3	Transfer Function of Linear Dynamical Quantum Systems.	49
2.4	Inclusion of Idealized Static Transformations on Bosonic Fields: The Bogoliubov Transformation	50
2.4.1	Completely Passive Linear Dynamical Quantum Systems.	53
2.5	Physical Realizability Conditions and Parameterizations for Linear Dynamical Quantum Systems	55
2.5.1	Physical Realizability Conditions for Linear QSDEs.	55
2.5.2	Parameterization of Linear Dynamical Quantum Systems.	57
2.5.3	Linear Dynamical Quantum Systems with Less Outputs Than Inputs	58
2.6	Stability of Linear Quantum Systems	59
2.7	Gaussian States.	61
2.7.1	Gaussian State of a Collection of Single-Mode Oscillators	61
2.7.2	Gaussian States of the Field and Their Fock Space Representation.	64
2.7.3	Coherent States	67
2.7.4	Coherent States of a Single-Mode Oscillator.	68
2.7.5	Coherent States of a Bosonic Field	68
	References.	70
3	Realization Theory for Linear Dynamical Quantum Systems	73
3.1	Architecture for Strict Realization.	75
3.1.1	The Concatenation and Series Product and Reducible Quantum Networks	75
3.1.2	Main Synthesis Theorem.	77
3.1.3	Systematic Synthesis of Linear Quantum Systems	80
3.1.4	Illustrative Synthesis Example.	93
3.2	Architecture for Strict Realization Using Quantum Feedback Networks	96
3.2.1	The Model Matrix and Concatenation of Model Matrices.	96
3.2.2	Edges, Elimination of Edges, and Reduced Markov Models	97

3.2.3	Main Synthesis Results	99
3.2.4	Synthesis of Completely Passive Systems	104
3.3	Transfer Function Realization	106
3.3.1	Pure Cascade Realization of the Transfer Function of Linear Quantum Systems	106
3.3.2	Conditions for Realizability by a Pure Cascade Connection	107
3.3.3	Transfer Function Realization of Completely Passive Linear Quantum Systems	109
3.3.4	Further Reading	114
	Appendix A: Adiabatic Elimination of Coupled Cavity Modes	114
	Appendix B: Proof of Theorem 3.4	117
	Appendix C: Proof of Lemma 3.1	119
	Appendix D: Proof of Corollary 3.1	120
	References	121
4	Quantum Filtering for Linear Dynamical Quantum Systems	123
4.1	Quantum Conditional Expectations	124
4.1.1	Quantum Probability Space	124
4.1.2	Conditional Expectations	126
4.2	Quantum Filtering Theory	127
4.2.1	Quantum Filtering: The Idea	128
4.2.2	Quantum Filter: Multiple-Input Multiple-Output Case	131
4.2.3	Stochastic Master Equation	134
4.2.4	QND Interaction and the Projection Postulate	136
4.3	Quantum Kalman Filter for Gaussian Linear Quantum Systems	137
4.3.1	Example in Quantum Optics	137
4.3.2	Quantum Filtering: Multiple-Input and Multiple-Output Case	141
4.4	Robust Linear Quantum Observers	144
4.4.1	Guaranteed-Error Robust Observer	144
4.4.2	Example	148
4.4.3	Further Reading	150
	References	150
5	Feedback Control of Linear Dynamical Quantum Systems	153
5.1	Measurement-Based Quantum Feedback Control	153
5.1.1	Controlled Quantum Evolution and Quantum Filter	153
5.1.2	Measurement-Based LQG Control	157
5.2	Coherent Feedback Quantum LQG Control	163
5.2.1	Reformulating the Quantum LQG Problem into a Rank-Constrained LMI Problem	167

5.2.2	Numerically Solving the Rank-Constrained LMI Problem	171
5.2.3	An Extension of the Numerical Procedure	172
5.2.4	Quantum LQG Control Design Examples	175
5.2.5	Quantum LQG Controller Design Example II	178
5.2.6	Further Reading	180
5.3	Coherent Feedback H^∞ Control	180
5.3.1	Dissipation Properties	181
5.3.2	H^∞ Controller Synthesis	184
5.3.3	H^∞ Synthesis in Quantum Optics	191
5.4	Further Reading	196
	Appendix A: Proof of Theorem 5.2	196
	Appendix B: Proof of Lemma 5.2.	198
	References.	200
