## Contents

1 Introduction to Computational Meso-Bio-Nano (MBN) Science and MBN EXPLORER ........................................ 1
  1.1 Meso-Bio-Nano Science: A Novel Field of Interdisciplinary Research ........................................... 1
    1.1.1 Structure and Dynamics of MBN Systems ........ 2
    1.1.2 Clustering, Self-organisation and Structure Formation in MBN Systems ............................. 7
    1.1.3 Novel Materials ........................................ 10
    1.1.4 Novel Technologies ................................... 12
    1.1.5 Multiscale Nature of MBN Systems ............... 14
  1.2 Computational Approaches in MBN Science ............... 16
    1.2.1 Quantum Atomic and Nanoscales ................. 16
    1.2.2 Classical Nano- and Mesoscales .................. 17
    1.2.3 Monte Carlo Approach and Finite Element Method ... 21
    1.2.4 MBN EXPLORER—a Universal Multiscale Approach .......................... 24
  1.3 Basics of MBN EXPLORER and MBN STUDIO ............... 25
    1.3.1 MBN EXPLORER Main Features .................... 29
    1.3.2 Areas of Application of MBN EXPLORER ............ 30
    1.3.3 MBN STUDIO Main Features ....................... 36

2 Theoretical Approaches for Multiscale Computer Simulations .......................................................... 43
  2.1 Hierarchy of Theoretical Methods and Their Limitations: ab initio Methods and Model Approaches ............ 43
  2.2 Methods for Studying Dynamical Molecular Processes and Related Phenomena ............................. 46
    2.2.1 Newtonian Dynamics ................................ 47
    2.2.2 Relativistic Dynamics ................................ 47
    2.2.3 Rigid Body Dynamics ................................ 48
    2.2.4 Temperature Control ................................ 49
2.3 Modeling Interatomic Interactions ........................................ 53
  2.3.1 Pairwise Potentials .............................................. 53
  2.3.2 Many-Body Potentials ......................................... 59
2.4 Studying Biomolecules: The Force Field Concept
  and Beyond .................................................................. 64
  2.4.1 Molecular Mechanics Force Field .............................. 64
  2.4.2 Rupture of Covalent Bonds ..................................... 67
  2.4.3 Rupture of Valence Angles ..................................... 69
  2.4.4 Rupture of Dihedral Interactions ............................. 70
  2.4.5 Formation of New Bonds ....................................... 71
  2.4.6 Partial Charges Redistribution ............................... 72
2.5 Multiscale Methods .................................................... 72
  2.5.1 Kinetic Monte Carlo Method ................................. 73
  2.5.2 Simplifications of the KMC Method ......................... 75
  2.5.3 Particle Dynamics Model ...................................... 76
  2.5.4 Irradiation Driven Molecular Dynamics .................... 78
2.6 Computational Aspects of Multi-particle Simulations ............... 80
  2.6.1 Basic Interaction Approach .................................. 80
  2.6.2 Linked Cell Interaction Approach ......................... 81
  2.6.3 Boundary Conditions .......................................... 84
  2.6.4 Calculation of Coulomb Interactions ....................... 88

3 Computational Modelling of MBN Systems .................................. 97
  3.1 Introduction ................................................................ 97
  3.2 MBN STUDIO Toolkit ............................................. 101
    3.2.1 Basic Structure of MBN STUDIO ......................... 101
    3.2.2 Visualisation of the Results .................................. 105
    3.2.3 Modeling MBN Systems ................................... 106
  3.3 Modeling of Crystalline Structures ................................ 108
    3.3.1 Specific Features of Crystalline Structures .............. 108
    3.3.2 Simulation of Crystalline Structures
        with MBN STUDIO .............................................. 111
  3.4 Modelling of Liquids ............................................. 113
    3.4.1 Liquids in MBN STUDIO .................................... 113
    3.4.2 Analysing Simulations with MBN STUDIO .............. 115
  3.5 Modelling of Gases .............................................. 116
  3.6 Modelling of Material Interphases ................................ 119

4 Atomic Clusters and Nanoparticles ......................................... 121
  4.1 Introduction ................................................................ 121
  4.2 The Problem of Global Minimum .................................. 124
    4.2.1 Cluster Fusion Process ...................................... 125
    4.2.2 Scenarios for Cluster Fusion Process ................. 126
    4.2.3 Selection Criteria for Cluster Fusion Process .......... 127
