

Contents

Part I Ordinary Differential Equations

1	Linear Differential Equations	3
1.1	Fundamental Theorem for First-Order Equations	3
1.2	Differentiability of the Solution	6
1.3	Linear Differential Equations of Second Order	9
1.4	Sturm-Liouville Problems	12
1.5	Singular Points of Linear Differential Equations	16
1.6	Fundamental Properties of the Heun Equation	20
2	Non-linear Equations	25
2.1	First Examples of Non-linear Ordinary Differential Equations	25
2.2	Non-linear Differential Equations in the Complex Domain	30
2.3	Integrals Not Holomorphic at the Origin.	33

Part II Linear Elliptic Equations

3	Harmonic Functions	41
3.1	Motivations for the Laplace Equation	41
3.2	Geometry of the Second Derivatives in the Laplacian	42
3.3	The Three Green Identities	43
3.4	Mean-Value Theorem	47
3.5	The Weak Maximum Principle	50
3.6	Derivative Estimates	51
	Appendix 3.a: Frontier of a Set and Manifolds with Boundary.	52
4	Mathematical Theory of Surfaces	53
4.1	Quadratic Differential Forms	53
4.2	Invariants and Differential Parameters	54
4.3	Differential Parameters of First Order	56

4.4	Equivalence of Quadratic Forms; Christoffel Formulae.	57
4.5	Properties of Christoffel Symbols	59
4.6	The Laplacian Viewed as a Differential Parameter of Order 2.	61
4.7	Isothermal Systems	63
4.8	Holomorphic Functions Associated with Isothermal Systems.	65
4.9	Isothermal Parameters.	66
4.10	Lie Theorem on the Lines of an Isothermal System	68
5	Distributions and Sobolev Spaces.	71
5.1	The Space $\mathcal{D}(\Omega)$ and Its Strong Dual	71
5.2	The Space $C^{1,\alpha}(\Omega)$ and Its Abstract Completion.	73
5.3	The Sobolev Space $H^{1,\alpha}(\Omega)$	74
5.4	The Spaces $C^{k,\alpha}$ and $H^{k,\alpha}$	75
5.5	The Trace Map for Elements of $H^{k,\alpha}(\Omega)$	76
5.6	The Space $H_0^{k,\alpha}(\Omega)$ and Its Strong Dual	77
5.7	Sub-spaces of $H^{k,\alpha}(\mathbb{R}^n)$	79
5.8	Fundamental Solution and Parametrix of a Linear Equation	80
	Appendix 5.a: Some Basic Concepts of Topology	82
6	The Caccioppoli-Leray Theorem	85
6.1	Second-Order Linear Elliptic Equations in n Variables.	85
6.2	The Leray Lemma and Its Proof.	86
6.3	Caccioppoli's Proof of Integral Bounds: Part 1.	88
6.4	Caccioppoli's Proof of Integral Bounds: Part 2.	93
7	Advanced Tools for the Caccioppoli-Leray Inequality	103
7.1	The Concept of Weak Solution.	103
7.2	Caccioppoli-Leray for Elliptic Systems in Divergence Form.	104
7.3	Legendre versus Legendre-Hadamard Conditions	109
7.4	Uniform, or Strong, or Uniform Strong, or Proper Ellipticity	110
8	Aspects of Spectral Theory.	113
8.1	Resolvent Set, Spectrum and Resolvent of a Linear Operator	113
8.2	Modified Resolvent Set and Modified Resolvent	114
8.3	Eigenvalues and Characteristic Values	116
8.4	Directions of Minimal Growth of the Resolvent.	117
8.5	Decay Rate of the Resolvent Along Rays.	118
8.6	Strongly Elliptic Boundary-Value Problems, and an Example	119

- 9 Laplace Equation with Mixed Boundary Conditions** 123
 - 9.1 Uniqueness Theorems with Mixed Boundary Conditions 123
 - 9.2 The De Giorgi Family of Solutions 124
 - 9.3 De Giorgi’s Clever use of the Characteristic Function
of a Set. 126
 - 9.4 Perimeter of a Set and Reduced Frontier
of Finite-Perimeter Sets. 132
- 10 New Functional Spaces: Morrey and Campanato.** 135
 - 10.1 Morrey and Campanato Spaces: Definitions and Properties . . . 135
 - 10.2 Functions of Bounded Mean Oscillation, and an Example . . . 140
 - 10.3 Glancing Backwards: The Spaces $W_{Loc}^{1,p}$ and $W^{1,p}$ 140
 - 10.4 How Sobolev Discovered His Functional Spaces 142
- 11 Pseudo-Holomorphic and Polyharmonic Frameworks** 157
 - 11.1 Local Theory of Pseudo-Holomorphic Functions 157
 - 11.2 Global Theory of Pseudo-Holomorphic Functions 162
 - 11.3 Upper and Lower Bound for the Increment Ratio. 163
 - 11.4 Decomposition Theorem for Biharmonic Functions 165
 - 11.5 Boundary-Value Problems for the Biharmonic Equation. 167
 - 11.6 Fundamental Solution of the Biharmonic Equation. 169
 - 11.7 Mean-Value Property for Polyharmonic Functions 171

Part III Calculus of Variations

- 12 The Euler Equations** 177
 - 12.1 Statement of the Problem 177
 - 12.2 The Euler Integral Condition 178
 - 12.3 The Euler Differential Condition. 179
 - 12.4 Variational Problem with Constraints 180
- 13 Classical Variational Problems.** 183
 - 13.1 Isoperimetric Problems 183
 - 13.2 Double Integrals and Minimal Surfaces 186
 - 13.3 Minimal Surfaces and Functions of a Complex Variable 188
 - 13.4 The Dirichlet Boundary-Value Problem 194

Part IV Linear and Non-linear Hyperbolic Equations

- 14 Characteristics and Waves, 1** 203
 - 14.1 Systems of Partial Differential Equations 203
 - 14.2 Characteristic Manifolds for First- and Second-Order
Systems. 205
 - 14.3 The Concept of Wavelike Propagation 209
 - 14.4 The Concept of Hyperbolic Equation 212

14.5	Riemann Kernel for a Hyperbolic Equation in 2 Variables	214
14.6	Lack of Smooth Cauchy Problem for the Laplace Equation	218
15	Characteristics and Waves, 2	221
15.1	Wavelike Propagation for a Generic Normal System	221
15.2	Cauchy’s Method for Integrating a First-Order Equation	224
15.3	The Bicharacteristics	229
15.4	Space-Time Manifold; Arc-Length; Geodesics	229
16	Fundamental Solution and Characteristic Conoid	233
16.1	Relation Between Fundamental Solution and Riemann’s Kernel	233
16.2	The Concept of Characteristic Conoid	235
16.3	Fundamental Solutions with an Algebraic Singularity	236
16.4	Geodesic Equations with and Without Reparametrization Invariance	238
17	How to Build the Fundamental Solution	241
17.1	Hamiltonian Form of Geodesic Equations	241
17.2	The Unique Real-Analytic World Function	244
17.3	Fundamental Solution with Odd Number of Variables	246
17.4	Convergence of the Power Series for U	249
18	Examples of Fundamental Solutions	253
18.1	Even Number of Variables and Logarithmic Term	253
18.2	Smooth Part of the Fundamental Solution	255
18.3	Parametrix of Scalar Wave Equation in Curved Space-Time	255
18.4	Non-linear Equations for Amplitude and Phase Functions	257
18.5	Tensor Generalization of the Ermakov-Pinney Equation	259
18.6	Damped Waves	260
19	Linear Systems of Normal Hyperbolic Form	263
19.1	Einstein Equations and Non-linear Theory	263
19.2	Equations Defining the Characteristic Conoid	265
19.3	A Domain of the Characteristic Conoid	267
19.4	Integral Equations for Derivatives of x^j and p_i	269
19.5	Relations on the Conoid Satisfied by the Unknown Functions	270
19.6	The Auxiliary Functions σ_s^r	271
19.7	Integrating Linear Combinations of the Equations	273
19.8	Determination of the Auxiliary Functions σ_s^r	274
19.9	Evaluation of the ω_s^r	275
19.10	Calculation of σ	276

- 19.11 Derivatives of the Functions σ_s^r 278
- 19.12 Behaviour in the Neighbourhood of the Vertex 280
- 19.13 Behaviour in the Neighbourhood of $\lambda_1 = 0$ 281
- 19.14 First Derivatives 285
- 19.15 Reverting to the Functions σ_s^r 286
- 19.16 Study of σ and Its Derivatives 288
- 19.17 Derivatives of the ω_s^r 292
- 19.18 Kirchhoff Formulae 293
- 19.19 Evaluation of the Area and Volume Elements 294
- 19.20 Limit as $\eta \rightarrow 0$ of the Integral Relations 295
- 19.21 Reverting to the Kirchhoff Formulae 296
- 19.22 Summary of the Results 297
- 19.23 Transformation of Variables 298
- 19.24 Application of the Results 300
- 19.25 Linear Systems of Second Order 301
- 20 Linear System from a Non-linear Hyperbolic System 303**
 - 20.1 Non-linear Equations 303
 - 20.2 Differentiation of the Equations (F) 304
 - 20.3 Application of the Results of Chap. 19 306
 - 20.4 Cauchy Data 306
 - 20.5 Summary of Results 308
 - 20.6 Solution of the Cauchy Problem for Non-linear Equations 311
- 21 Cauchy Problem for General Relativity 313**
 - 21.1 The Equations of Einstein's Gravity 313
 - 21.2 Vacuum Einstein Equations and Isothermal Coordinates 314
 - 21.3 Solution of the Cauchy Problem for the Equations
 $G_{\alpha\beta} = 0$ 315
 - 21.4 The Solution of $G_{\alpha\beta} = 0$ Verifies the Conditions
of Isothermy 316
 - 21.5 Uniqueness of the Solution 318
- 22 Causal Structure and Global Hyperbolicity 321**
 - 22.1 Causal Structure of Space-Time 321
 - 22.2 Strong Causality 322
 - 22.3 Stable Causality 323
 - 22.4 Global Hyperbolicity 324

Part V Parabolic Equations

- 23 The Heat Equation 329**
 - 23.1 A Summary on Linear Equations in Two Independent
Variables 329
 - 23.2 Fundamental Solution of the Heat Equation 330

24 The Nash Theorem on Parabolic Equations 335

24.1 The Moment Bound 335

24.2 The G Bound 344

24.3 The Overlap Estimate 350

24.4 Time Continuity 352

Part VI Fuchsian Functions

25 The Poincaré Work on Fuchsian Functions 357

25.1 Properties of Fuchsian Functions 357

25.2 Θ -Fuchsian Functions. 359

25.3 System of ζ -Fuchsian Functions 360

26 The Kernel of (Laplacian Plus Exponential) 363

26.1 Motivations for the Analysis. 363

26.2 The u Function 365

26.3 Klein Surfaces. 373

26.4 The U Function 377

Appendix: Vertices in the Theory of Fuchsian Functions 381

Part VII The Riemann ζ -Function

27 The Functional Equations of Number Theory. 387

27.1 The Euler Theorem on Prime Numbers and the ζ -function. 387

27.2 Γ - and ζ -Function from the Jacobi Function. 389

27.3 The ξ -function: Its Functional Equation and Its Integral Representation 392

27.4 Logarithm of the ζ -Function 393

27.5 The Riemann Hypothesis on Non-trivial Zeros of the ζ -Function 400

Part VIII A Window on Modern Theory

28 The Symbol of Pseudo-Differential Operators. 405

28.1 From Differential to Pseudo-Differential Operators 405

28.2 The Symbol of Pseudo-Differential Operators on Manifolds. 407

28.3 Geometry Underlying the Symbol Map 408

28.4 Symbol and Leading Symbol as Equivalence Classes. 413

28.5 A Smooth Linear Equation Without Solution 417

28.6 Solving Pseudo-Differential Equations 422

References 423
