

Contents

1	Basics	1
1.1	Introduction	2
1.1.1	The Quantum of Light	2
1.1.2	Electron Diffraction	3
1.1.3	Heisenberg Uncertainty Principle	4
1.1.4	Does God Play Dice?	5
1.1.5	Summary	6
1.2	Classical Framework	6
1.2.1	Phase Space	7
1.2.2	Observables	8
1.2.3	Dynamics	8
1.2.4	States	10
1.2.5	Properties of Poisson Brackets	10
1.2.6	Canonical Relations	11
1.2.7	Pure and Mixed States	11
1.2.8	Summary	12
1.3	Quantum Framework	12
1.3.1	q-Numbers	13
1.3.2	Hilbert Space	13
1.3.3	Linear Operators	14
1.3.4	Projectors	16
1.3.5	Normal Linear Operators	17
1.3.6	Trace of an Operator	19
1.3.7	Expectation Values	20
1.3.8	Summary	21
1.4	Time and Space	22
1.4.1	Measurement and Experiment	23
1.4.2	Time Translation	24
1.4.3	Space Translation	25

1.4.4	Location	25
1.4.5	Rotation	26
1.4.6	Orbital Angular Momentum and Spin	27
1.4.7	Schrödinger Picture	28
1.4.8	Summary	29
2	Simple Examples	31
2.1	Ammonia Molecule	31
2.1.1	Hilbert Space and Energy Observable	33
2.1.2	Ammonia Molecule in an External Electric Field	34
2.1.3	Dipole Moment Expectation Value	35
2.1.4	Ammonium Maser	36
2.1.5	Summary	37
2.2	Quasi-Particles	38
2.2.1	Hilbert Spaces \mathbb{C}^n and ℓ^2	38
2.2.2	Hopping Model	40
2.2.3	Wave Packets	41
2.2.4	Group Velocity and Effective Mass	42
2.2.5	Scattering at Defects	43
2.2.6	Trapping by Defects	45
2.2.7	Summary	46
2.3	Neutron Scattering on Molecules	46
2.3.1	Feynman's Approach	47
2.3.2	Spherical and Plain Waves	48
2.3.3	Neutron Scattering on a Diatomic Molecule	48
2.3.4	Cross Section	49
2.3.5	Orientation Averaged Cross Section	50
2.3.6	Neutron Diffraction	52
2.3.7	Summary	53
2.4	Free Particles	53
2.4.1	Square Integrable Functions	54
2.4.2	Location	55
2.4.3	Linear Momentum	55
2.4.4	Wave Packets	57
2.4.5	Motion of a Free Particle	58
2.4.6	Spreading of a Free Particle	59
2.4.7	Summary	60
2.5	Small Oscillations	60
2.5.1	The Hamiltonian	61
2.5.2	Ladder Operators	62
2.5.3	Eigenstate Wave Functions	63
2.5.4	Summary	64

3	Atoms and Molecules	65
3.1	Radial Schrödinger Equation	66
3.1.1	Spherical Coordinates	66
3.1.2	The Laplacian	67
3.1.3	Spherical Harmonics	67
3.1.4	Spherical Symmetric Potential	69
3.1.5	Behavior at Origin and Infinity	70
3.1.6	Alternative Form	71
3.1.7	Summary	71
3.2	Hydrogen Atom	72
3.2.1	Atomic Units	72
3.2.2	Non-relativistic Hydrogen Atom	74
3.2.3	Orbitals	75
3.2.4	Relativistic Hydrogen Atom	77
3.2.5	Classical Hydrogen Atom	80
3.2.6	Summary	81
3.3	Helium Atom	82
3.3.1	Wave Functions	82
3.3.2	Minimal Ground State Energy	84
3.3.3	Sample Calculation	86
3.3.4	The Negative Hydrogen Ion	88
3.3.5	Summary	88
3.4	Hydrogen Molecule	89
3.4.1	Wave Functions and Hamiltonian	89
3.4.2	Born–Oppenheimer Approximation	91
3.4.3	The Molecular Potential	91
3.4.4	Molecular Vibrations	93
3.4.5	Molecular Rotations	95
3.4.6	Summary	95
3.5	More on Approximations	96
3.5.1	The Minimax Theorem	97
3.5.2	Remarks	98
3.5.3	Stationary Perturbations	100
3.5.4	Coping with Degeneracies	101
3.5.5	Summary	101
3.6	Stark and Zeeman Effect	102
3.6.1	Multipoles	102
3.6.2	Electric Dipole Moment	105
3.6.3	Stark Effect	106
3.6.4	Magnetic Dipole Moment	108
3.6.5	Zeeman Effect	109
3.6.6	Summary	110

4	Decay and Scattering	111
4.1	Forced Transitions	112
4.1.1	Time Dependent External Field.	112
4.1.2	Detailed Balance	115
4.1.3	Incoherent Radiation	115
4.1.4	Summary.	119
4.2	Spontaneous Transitions	119
4.2.1	Einstein's Argument	119
4.2.2	Lifetime of an Excited State	121
4.2.3	Comment on Einstein's Reasoning	121
4.2.4	Classical Limit	122
4.2.5	Summary.	123
4.3	Scattering Amplitude	123
4.3.1	Cross Section	124
4.3.2	Scattering Amplitude.	125
4.3.3	Center of Mass and Laboratory Frame	126
4.3.4	Relativistic Description	128
4.3.5	Summary.	129
4.4	Coulomb Scattering	129
4.4.1	Scattering Schrödinger Equation	130
4.4.2	Born Approximation	131
4.4.3	Scattering of Point Charges.	132
4.4.4	Electron-Hydrogen Atom Scattering	133
4.4.5	Form Factor and Structure	134
4.4.6	Summary.	136
5	Thermal Equilibrium	137
5.1	Entropy and the Gibbs State	138
5.1.1	Observables and States	139
5.1.2	First Main Law	141
5.1.3	Entropy	142
5.1.4	Second Main Law	145
5.1.5	The Gibbs State	146
5.1.6	Free Energy and Temperature	147
5.1.7	Chemical Potentials.	148
5.1.8	Minimal Free Energy	149
5.1.9	Summary.	150
5.2	Thermodynamics	150
5.2.1	Reversible and Irreversible Processes	151
5.2.2	Free Energy as Thermodynamic Potential	152
5.2.3	More Thermodynamic Potentials.	153
5.2.4	Heat Capacity and Compressibility	154
5.2.5	Chemical Potential	156
5.2.6	Chemical Reactions.	158

- 5.2.7 Particle Number as an External Parameter 158
- 5.2.8 Summary. 160
- 5.3 Continuum Physics. 160
 - 5.3.1 Material Points 161
 - 5.3.2 Balance Equations. 162
 - 5.3.3 Particles, Mass and Electric Charge 163
 - 5.3.4 Conduction and Covariance 165
 - 5.3.5 Momentum, Energy, and the First Main Law 167
 - 5.3.6 Entropy and the Second Main Law. 170
 - 5.3.7 Summary. 172
- 5.4 Second Quantization. 173
 - 5.4.1 Number Operators. 173
 - 5.4.2 Plane Waves 175
 - 5.4.3 Local Quantum Field 175
 - 5.4.4 Fermions 176
 - 5.4.5 Some Observables. 178
 - 5.4.6 Time 179
 - 5.4.7 Summary. 180
- 5.5 Gases 180
 - 5.5.1 Fermi Gas 181
 - 5.5.2 Bose Gas. 184
 - 5.5.3 Black-Body Radiation 186
 - 5.5.4 Boltzmann Gas 187
 - 5.5.5 Rotating and Vibrating Molecules. 190
 - 5.5.6 Cluster Expansion 192
 - 5.5.7 Joule–Thomson Effect. 194
 - 5.5.8 Summary. 196
- 5.6 Crystal Lattice Vibrations. 198
 - 5.6.1 Phenomenological Description 198
 - 5.6.2 Phonons 200
 - 5.6.3 Summary. 207
- 5.7 Electronic Band Structure. 207
 - 5.7.1 Hopping Model. 208
 - 5.7.2 Fermi-Energy 209
 - 5.7.3 The Cold Solid 211
 - 5.7.4 Metals, Dielectrics and Semiconductors 212
 - 5.7.5 Summary. 213
- 5.8 External Fields 214
 - 5.8.1 Matter and Electromagnetic Fields 214
 - 5.8.2 Alignment of Electric Dipoles. 217
 - 5.8.3 Alignment of Magnetic Dipoles 218
 - 5.8.4 Heisenberg Ferromagnet 220
 - 5.8.5 Summary. 223

6	Fluctuations and Dissipation	225
6.1	Fluctuations	226
6.1.1	An Example	227
6.1.2	Density Fluctuations	228
6.1.3	Correlations and Khinchin's Theorem	230
6.1.4	Thermal Noise of a Resistor	232
6.1.5	Langevin Equation	232
6.1.6	Nyquist Formula	234
6.1.7	Remarks	236
6.1.8	Summary	236
6.2	Brownian Motion	237
6.2.1	Einstein's Explanation	237
6.2.2	The Diffusion Coefficient	241
6.2.3	Langevin's Approach	242
6.2.4	Summary	244
6.3	Linear Response Theory	244
6.3.1	Perturbations	245
6.3.2	Dispersion Relations	250
6.3.3	Summary	252
6.4	Dissipation	253
6.4.1	Wiener–Khinchin Theorem	253
6.4.2	Kubo–Martin–Schwinger Formula	254
6.4.3	Callen–Welton Theorem	255
6.4.4	Interaction with an Electromagnetic Field	257
6.4.5	Summary	259
7	Mathematical Aspects	261
7.1	Topological Spaces	261
7.1.1	Abstract Topological Space	262
7.1.2	Metric Space	263
7.1.3	Linear Space with Norm	264
7.1.4	Linear Space with Scalar Product	265
7.1.5	Convergent Sequences	265
7.1.6	Continuity	266
7.1.7	Cauchy Sequences and Completeness	267
7.2	The Lebesgue Integral	268
7.2.1	Measure Spaces	268
7.2.2	Measurable Functions	269
7.2.3	The Lebesgue Integral	270
7.2.4	Function Spaces	271
7.3	On Probabilities	272
7.3.1	Probability Spaces	272
7.3.2	Random Variables	273
7.3.3	Law of Large Numbers and Central Limit Theorem	276

- 7.4 Generalized Functions 277
 - 7.4.1 Test Functions. 278
 - 7.4.2 Distributions 278
 - 7.4.3 Derivatives 279
 - 7.4.4 Fourier Transforms 280
- 7.5 Linear Spaces 283
 - 7.5.1 Scalars. 284
 - 7.5.2 Vectors 284
 - 7.5.3 Linear Subspaces. 284
 - 7.5.4 Dimension. 285
 - 7.5.5 Linear Mappings 285
 - 7.5.6 Ring of Linear Operators 285
- 7.6 Hilbert Spaces 286
 - 7.6.1 Operator Norm 288
 - 7.6.2 Adjoint Operator 288
- 7.7 Projection Operators 289
 - 7.7.1 Projectors 289
 - 7.7.2 Decomposition of Unity 291
- 7.8 Normal Operators 291
 - 7.8.1 Spectral Decomposition. 291
 - 7.8.2 Unitary Operators 293
 - 7.8.3 Self-Adjoint Operators 294
 - 7.8.4 Positive Operators. 295
 - 7.8.5 Probability Operators 295
- 7.9 Operator Functions 296
 - 7.9.1 Power Series 296
 - 7.9.2 Normal Operator 297
 - 7.9.3 Comparison. 297
 - 7.9.4 Example 297
- 7.10 Translations 298
 - 7.10.1 Periodic Boundary Conditions. 299
 - 7.10.2 Domain of Definition 299
 - 7.10.3 Selfadjointness 300
 - 7.10.4 Spectral Decomposition. 301
- 7.11 Fourier Transform. 302
 - 7.11.1 Fourier Series 302
 - 7.11.2 Fourier Expansion. 303
 - 7.11.3 Fourier Integral 303
 - 7.11.4 Convolution Theorem 304
- 7.12 Position and Momentum. 306
 - 7.12.1 Test Functions. 306
 - 7.12.2 Canonical Commutation Rules 307

7.12.3	Uncertainty Relation	308
7.12.4	Quasi-Eigenfunctions	308
7.13	Ladder Operators	309
7.13.1	Raising and Lowering Operators	310
7.13.2	Ground State and Excited States	310
7.13.3	Harmonic Oscillator	311
7.13.4	Quantum Fields	312
7.14	Transformation Groups	314
7.14.1	Group	314
7.14.2	Finite Groups	314
7.14.3	Topological Groups	315
7.14.4	Angular Momentum	318
	Glossary	321
	Index	361
