

Contents

1	Twentieth-Century Quantum Mechanics	1
1.1	Quantum Theory and Atomic Structure	1
1.1.1	Wave Nature of Light	2
1.1.2	Corpuscular Nature of Light	4
1.1.3	Corpuscular Nature of the Electron	8
1.1.4	Wave Nature of the Electron	9
1.1.5	Early Models of Atomic Structure	11
1.2	Probability and Statistical Mechanics	16
1.2.1	Introduction to Probability	17
1.2.2	Statistical Mechanics	20
1.2.3	Combinatorial Analysis	23
1.2.4	Gaussian Integrals	27
1.2.5	Maxwell–Boltzmann Distribution	29
1.3	The Birth of Quantum Mechanics	32
1.3.1	Hilbert Space	36
2	Mathematical Methods in Quantum Mechanics	43
2.1	Vector Analysis	43
2.2	Matrices in Quantum Mechanics	49
2.3	Quantum Mechanics in Toy Hilbert Space	58
2.4	The Hilbert Space of Real Wavefunctions	63
2.5	Complex Variables	70
2.6	Complex Vector Spaces and Dirac Notation	75
2.7	Coordinates and Momenta in Quantum Mechanics	79
2.8	Heisenberg Uncertainty Principle	83
3	The Schrödinger Equation	85
3.1	Heuristic Derivation	85
3.2	Particle in a Box	88
3.3	The Harmonic Oscillator	93

- 3.4 Angular Momentum 96
 - 3.4.1 Particle in a Ring 96
 - 3.4.2 Angular Momentum Operators 98
 - 3.4.3 Eigenvalues and Eigenfunctions 99
 - 3.4.4 Matrix Representations 102
 - 3.4.5 Electron Spin 102
 - 3.4.6 Abstract Theory of Angular Momentum 103
- 3.5 The Hydrogen Atom 104
 - 3.5.1 Spherical Polar Coordinates 105
 - 3.5.2 Solution of the Schrödinger Equation 106
 - 3.5.3 Atomic Structure. 109
- 3.6 Time Evolution and Collapse of the Wavefunction 111
 - 3.6.1 The Evolution Operator 111
 - 3.6.2 Schrödinger and Heisenberg Pictures 113
 - 3.6.3 Collapse of the Wavefunction. 115
- 3.7 Philosophical Issues in Quantum Mechanics 117
- 4 New Adventures: Isotropic Vectors, Rotations, Spinors, and Groups.** 121
 - 4.1 Invariance and the Objective World. 121
 - 4.2 Isotropic Vectors 126
 - 4.3 The Stereographic Projection 127
 - 4.3.1 Spinors in Spherical Coordinates 136
 - 4.4 Lie Groups: $SO(3)$ and Vector Rotation, $SU(2)$ and Spinor Rotation 137
- 5 Quantum Entanglement and Bell’s Theorem** 153
 - 5.1 Product States in Hilbert Space 153
 - 5.2 Bohm’s Version of the Einstein–Podolsky–Rosen Experiment. . . 160
 - 5.3 Hidden Variables and Bell’s Inequality 164
 - 5.4 Generalized Bell’s Inequality 169
 - 5.5 Maxwell’s Equations, the Nature of Light, and All That 173
 - 5.6 Light Polarization and the Spin of the Photon 177
 - 5.7 The Hilbert Space of One Photon and Aspect’s Experiment . . . 179
 - 5.7.1 Photon Polarization. 179
 - 5.7.2 Aspect’s Experiment. 182
 - 5.8 Measurement and Decoherence 184
- 6 Digital and Quantum Computers** 195
 - 6.1 Binary Number System 195
 - 6.2 Boolean Algebra 196
 - 6.2.1 Venn Diagrams. 198
 - 6.3 Classical Computers. 201
 - 6.3.1 Logic Gates 201
 - 6.3.2 Binary Multiplication 205
 - 6.3.3 A Living Computer. 207

- 6.4 Quantum Computation 207
 - 6.4.1 Quantum Gates 210
- 6.5 Deutsch’s Algorithm 216
- 6.6 Bell States 218
- 6.7 Quantum Teleportation. 220
- 6.8 The Toffoli Logic Gate 222
- 6.9 Quantum Fourier Transform. 224
 - 6.9.1 Phase Estimation. 230
- 6.10 Some Results from Number Theory 233
 - 6.10.1 The Euclidean Algorithm 233
 - 6.10.2 Bezout’s Lemma. 234
 - 6.10.3 Modular Arithmetic 235
 - 6.10.4 Fermat’s Little Theorem 238
 - 6.10.5 Chinese Remainder Theorem 240
 - 6.10.6 More Group Theory 242
 - 6.10.7 Factorization of Large Numbers 244
 - 6.10.8 Quantum Order Finding 248
 - 6.10.9 Continued Fractions 252
 - 6.10.10 Prime Number Theorem 253
- 6.11 Quantum Cryptography 254
 - 6.11.1 RSA Cryptography 255
 - 6.11.2 Code Breaking 257
- Appendix 258
- Bibliography 263**
- Index 267**

Twenty-First Century Quantum Mechanics: Hilbert Space
to Quantum Computers

Mathematical Methods and Conceptual Foundations

Fano, G.; Blinder, S.M.

2017, XVI, 271 p. 142 illus., 12 illus. in color., Hardcover

ISBN: 978-3-319-58731-8
