## Contents

1. **Two Ways to Treat Time in Reduced Basis Methods** .......................... 1
   Silke Glas, Antonia Mayerhofer, and Karsten Urban

2. **Simultaneous Empirical Interpolation and Reduced Basis Method: Application to Non-linear Multi-Physics Problem** ........... 17
   Cécile Daversin and Christophe Prud’homme

3. **A Certified Reduced Basis Approach for Parametrized Optimal Control Problems with Two-Sided Control Constraints** ..... 37
   Eduard Bader, Martin A. Grepl, and Karen Veroy

4. **A Reduced Basis Method with an Exact Solution Certificate and Spatio-Parameter Adaptivity: Application to Linear Elasticity** ................................................................................. 55
   Masayuki Yano

5. **A Reduced Basis Method for Parameter Functions Using Wavelet Approximations** ...................................................... 77
   Antonia Mayerhofer and Karsten Urban

6. **Reduced Basis Isogeometric Mortar Approximations for Eigenvalue Problems in Vibroacoustics** ............................... 91
   Thomas Horger, Barbara Wohlmuth, and Linus Wunderlich

7. **Reduced Basis Approximations for Maxwell’s Equations in Dispersive Media** .......................................................... 107
   Peter Benner and Martin Hess

8. **Offline Error Bounds for the Reduced Basis Method** ............... 121
   Robert O’Connor and Martin Grepl

9. **ArbiLoMod: Local Solution Spaces by Random Training in Electrodynamics** ............................................................... 137
   Andreas Buhr, Christian Engwer, Mario Ohlberger, and Stephan Rave
10 Reduced-Order Semi-Implicit Schemes for Fluid-Structure Interaction Problems ....................................................... 149
Francesco Ballarin, Gianluigi Rozza, and Yvon Maday

11 True Error Control for the Localized Reduced Basis Method for Parabolic Problems ..................................................... 169
Mario Ohlberger, Stephan Rave, and Felix Schindler

12 Efficient Reduction of PDEs Defined on Domains with Variable Shape ................................................................. 183
Andrea Manzoni and Federico Negri

13 Localized Reduced Basis Approximation of a Nonlinear Finite Volume Battery Model with Resolved Electrode Geometry ........ 201
Mario Ohlberger and Stephan Rave

14 A-Posteriori Error Estimation of Discrete POD Models for PDE-Constrained Optimal Control .................................. 213
Martin Gubisch, Ira Neitzel, and Stefan Volkwein

15 Hi-POD Solution of Parametrized Fluid Dynamics Problems: Preliminary Results ....................................................... 235
Davide Baroli, Cristina Maria Cova, Simona Perotto, Lorenzo Sala, and Alessandro Veneziani

16 Adaptive Sampling for Nonlinear Dimensionality Reduction Based on Manifold Learning .............................................. 255
Thomas Franz, Ralf Zimmermann, and Stefan Görtz

17 Cross-Gramian-Based Model Reduction: A Comparison ........ 271
Christian Himpe and Mario Ohlberger

18 Truncated Gramians for Bilinear Systems and Their Advantages in Model Order Reduction ............................. 285
Peter Benner, Pawan Goyal, and Martin Redmann

19 Leveraging Sparsity and Compressive Sensing for Reduced Order Modeling ................................................................. 301
J. Nathan Kutz, Syuzanna Sargsyan, and Steven L. Brunton

20 A HJB-POD Approach to the Control of the Level Set Equation ...... 317
Alessandro Alla, Giulia Fabrini, and Maurizio Falcone

21 Model Order Reduction Approaches for Infinite Horizon Optimal Control Problems via the HJB Equation ..................... 333
Alessandro Alla, Andreas Schmidt, and Bernard Haasdonk

22 Interpolatory Methods for $\mathcal{H}_\infty$ Model Reduction of Multi-Input/Multi-Output Systems ................................. 349
Alessandro Castagnotto, Christopher Beattie, and Serkan Gugercin
23 Model Reduction of Linear Time-Varying Systems with Applications for Moving Loads ........................................ 367
M. Cruz Varona and B. Lohmann

24 Interpolation Strategy for BT-Based Parametric MOR of Gas Pipeline-Networks .......................................................... 387
Y. Lu, N. Marheineke, and J. Mohring

25 Energy Stable Model Order Reduction for the Allen-Cahn Equation ................................................................. 403
Murat Uzunca and Bülent Karasözen

26 MOR-Based Uncertainty Quantification in Transcranial Magnetic Stimulation ......................................................... 421
Lorenzo Codecasa, Konstantin Weise, Luca Di Rienzo, and Jens Haueisen

27 Model Order Reduction of Nonlinear Eddy Current Problems Using Missing Point Estimation ........................................ 439
Y. Paquay, O. Brüls, and C. Geuzaine

28 On Efficient Approaches for Solving a Cake Filtration Model Under Parameter Variation ........................................ 455
S. Osterroth, O. Iliev, and R. Pinnau

29 Model Reduction for Coupled Near-Well and Reservoir Models Using Multiple Space-Time Discretizations .................. 471
Walid Kheriji, Yalchin Efendiev, Victor Manuel Calo, and Eduardo Gildin

30 Time-Dependent Parametric Model Order Reduction for Material Removal Simulations .............................................. 491
Michael Baumann, Dominik Hamann, and Peter Eberhard
Model Reduction of Parametrized Systems
Benner, P.; Ohlberger, M.; Patera, A.; Rozza, G.; Urban, K. (Eds.)
2017, XII, 504 p., Hardcover
ISBN: 978-3-319-58785-1
