Contents

Foreword (by A. Eamonn Kelly) .......................................................................................... v
Contents ................................................................................................................................ vii
List of Figures ..................................................................................................................... xi
List of Tables ....................................................................................................................... xiii
Overall Book Abstract, and Individual Chapter Abstracts .............................................. xv
Preface to the Series ........................................................................................................... xxi
Preface to the Book ............................................................................................................ xxii

1. Identifying a Problem with School Algebra ................................................................. 1
   A Fundamental Problem with School Algebra ............................................................ 1
   Some Performance Data, and Associated Critiques of Practices in School Algebra ..... 2
   The Background to How and Why this Book was Written ......................................... 5
   Overview of this Book ................................................................................................. 6

2. Historical Reflections on How Algebra Became a Vital Component of Middle- and Secondary-School Curricula ................................................................. 11
   Providing Historical Frameworks for Mathematics Education Research ............... 11
   Algebra in Secondary School Mathematics: The Debate Over Purpose .................. 14
   Is School Algebra a Unidimensional Trait? ................................................................. 44
   The History of Mathematics and the History of School Mathematics ..................... 47

3. Framing a Classroom Intervention Study in a Middle-School Algebra Environment ................................................................. 59
   Applying Principles of Design Research in Mathematics Education ........................ 59
   The Role of Theory in the Middle-School Algebra Investigation ............................... 62

4. Document Analysis: The Intended CCSSM Elementary- and Middle-School Algebra Curriculum ................................................................. 71
   Approaches to Introducing Algebra: Structure and Modeling .................................... 71
   Overview of the Main Study ....................................................................................... 72
   Concepts of Algebraic Structure and Modeling, as Presented in the
     Common-Core State Standards for Mathematics ..................................................... 73
   Structural and Functional Approaches, as Presented in the Mathematics
     Textbook Used by Participating Students .............................................................. 80
   The Problem as it Appeared to be at the Beginning of the Study ............................. 83

5. Review of Pertinent Literature .................................................................................... 87
   The Design Research Foundation for the Study ....................................................... 88
   Theoretical Bases for the Study ................................................................................. 90
   Signifiers, Objects, Interpretants, and Charles Sanders Peirce ............................... 91
   Cognitive Structures and Individual Learners ......................................................... 102
Literature Which Helped Frame the Design of the Teaching Intervention ................................. 106
Research Questions .................................................................................................................. 108

6. Research Design and Methodology .................................................................................. 115
  Setting up the Intervention .................................................................................................... 116
  Professional Development in a Theoretical Context ............................................................. 117
  Intervention Setting and Theoretical Base .......................................................................... 118
  Procedures .......................................................................................................................... 123
  Instrumentation .................................................................................................................. 124
  Research Hypotheses, and Issues Related to the Quantitative Analysis ......................... 128
  Issues Related to the Qualitative Analyses ..................................................................... 136
  Concluding Comments .................................................................................................... 138

7. Quantitative Analyses of Data ......................................................................................... 141
  Overview of Quantitative Data .......................................................................................... 141
  Analyses of Pre-Teaching Data ........................................................................................... 144
  Calculation of Effect Sizes .................................................................................................. 152
  Summary and Concluding Comments on the Quantitative Analyses ................................ 158

8. Qualitative Analyses of Data .......................................................................................... 155
  Intended, Implemented and Received Curricula ................................................................. 155
  Peirce’s Triadic Semiotic Position and Herbart’s Theory of Apperception ......................... 156
  Analyses of Qualitative Data Generated by the “Structure” Intervention ......................... 157
  Analyzing Samples of Interview Data Relating to “Structure” ......................................... 160
  Analyses of Qualitative Data Generated by the Modeling Intervention .............................. 166
  Cognitive Growth in Modeling Related to the Subscript Notation for Sequences .......... 170
  Cognitive Growth in Modeling Related to Generalizing for the $n$th Term ....................... 171
  Analyses of Student Responses to the Six Interview Tasks .............................................. 174
  Qualitative Analyses of the Implemented Curriculum .................................................... 186
  Concluding Comments with Respect to the Qualitative Analyses .................................. 189

9. Answers to Research Questions, and Discussion ............................................................ 193
  Answer to Research Question 1 ......................................................................................... 193
  Answer to Research Question 2 ......................................................................................... 195
  Answer to Research Question 3 ......................................................................................... 197
  Answer to Research Question 4 ......................................................................................... 199
  Answer to Research Question 5 ......................................................................................... 201
  Answer to Research Question 6 ......................................................................................... 203
  Possibilities for Future Related Research ....................................................................... 205
  Final Comments on the Workshop “Lessons” ................................................................. 206
  Comments on the Study by the Two Participating Teachers .............................................. 207

10. Postscript: Framing Research Aimed at Improving School Algebra .............................. 211
    Sometimes the Most Appropriate Theories for Mathematics Education Research will Come from the Past .......................... 211
Contents

Giving Precedence to Peirce’s, Herbart’s, and Del Campo and Clements’ Theories ......212
Did the Intervention Improve the Participating Students’ Knowledge of, and Ability to Generalize, and Apply, School Algebra? ......................................................... 216
Moving Forward .............................................................................................................. 217

Author Biographies ........................................................................................................ 223
List of Appendices ......................................................................................................... 225

Appendix A: Protocol for Algebra Interviews with Seventh-Graders ......................... 227
Appendix B: Algebra Test (Three Parallel Versions Are Reproduced) ......................... 229
Appendix C: “Questionnaire” Completed by Seventh-Grade Students at School W at the Beginning of the Algebra Workshops on “Structure” .............................. 241
Appendix D: Statement of Instructional Aims for the Structure Workshops with the Seventh-Grade Students at School W ......................................................... 243
Appendix E: Detailed Lesson Plans for Four Workshops on “Structure” for Seventh-Grade Students at School W, Including Homework Challenges for Each Workshop .............................................................................. 245
Appendix F: Detailed Plans for Group Tasks in the Modeling Workshops: Finding Recursive and Explicit Rules for Patterns ......................................................... 261
Appendix G: Classroom Observation Schedule ........................................................... 287
Appendix H: Pre-Teaching to Post-Teaching “Growth” with Respect to the Five Basic Cognitive Structure Components ................................................................. 289
Appendix I: Generalization Categories (After Radford, 2006) .................................... 295

Composite Reference List .............................................................................................. 299
Author Index .................................................................................................................. 317
Subject Index ................................................................................................................ 323
Using Design Research and History to Tackle a Fundamental Problem with School Algebra
Kanbir, S.; Clements, M.A.; Ellerton, N.F.
2018, XXIV, 327 p. 55 illus., 14 illus. in color., Hardcover
ISBN: 978-3-319-59203-9
