

Contents

1	Introduction	1
1.1	History	1
1.2	Definitions and Notations	3
	References.	10
2	Ring Theory	13
2.1	Finite Commutative Rings	13
2.2	Frobenius Rings	15
2.3	Chinese Remainder Theorem	18
2.4	Generators	22
	References.	27
3	MacWilliams Relations	29
3.1	Introduction to the MacWilliams Relations.	29
3.2	MacWilliams Relations for Codes Over Groups.	30
3.3	MacWilliams Relations for Codes Over Rings	34
3.4	A Practical Guide to the MacWilliams Relations	37
	References.	40
4	Families of Rings	41
4.1	Rings of Order 4	41
4.2	Ranks and Kernels of Quaternary Codes	46
4.3	X -rings	48
4.4	The Ring $R_{q,A}$	52
4.5	Chain Rings and Principal Ideal Rings	54
4.6	Generalized Singleton Bound	55
	References.	57
5	Self-dual Codes	59
5.1	Self-dual Codes Over Frobenius Rings.	59
5.2	Connections to Lattices.	64

5.3	Connections to Binary Self-dual Codes	67
5.4	Connections to Designs	72
5.5	Linear Complementary Dual	77
	References.	79
6	Cyclic and Constacyclic Codes	83
6.1	Polycyclic Codes	83
6.2	Constacyclic Codes Over Formal Power Series Rings and Chain Rings.	86
6.3	Codes as Ideals in Group Rings	93
6.4	Quasicyclic Codes	95
6.5	θ -Cyclic Codes.	98
	References.	99
	Index	101
