Part I Basic Concepts

1	Definitions and Examples	3
1.1	Definitions	3
1.2	Optimality Conditions	5
1.3	Illustrative Examples	7
2	Scalarization	13
2.1	General Idea	13
2.2	Tchebycheff Method	14
2.3	Achievement Scalarization Function	16
2.4	k th-Objective Weighted-Constraint	17
2.5	Pascoletti and Serafini Scalarization	18
3	Approximation and Complexity	19
3.1	Some Results on the Complexity of Multi-Objective Optimization	19
3.2	Approximate Representation of Pareto Sets	25
3.2.1	The ε -Constraint Method	25
3.2.2	The Normalized Normal Constraint Method	27
3.2.3	The Method of Normal Boundary Intersection	28
3.2.4	The Method of k th-Objective Weighted-Constraint	29
3.2.5	An Example of Adaptive Method	30
4	A Brief Review of Non-convex Single-Objective Optimization	33
4.1	Introduction	33
4.2	Lipschitz Optimization	34
4.3	Statistical Models-Based Global Optimization	36
4.3.1	General Assumptions	36
4.3.2	Statistical Models for Global Optimization	37
4.3.3	Algorithms	40
4.4	Branch and Probability Bound Methods	41

Part II Theory and Algorithms

5	Multi-Objective Branch and Bound	45
5.1	Branch and Bound for Continuous Optimization Problems	47
5.2	Branch and Bound for Combinatorial Optimization Problems	50
6	Worst-Case Optimal Algorithms	57
6.1	Optimal Algorithms for Lipschitz Functions	57
6.1.1	Introduction	57
6.1.2	Mathematical Model	58
6.1.3	Optimal Passive Algorithm	61
6.1.4	Optimal Sequential Algorithm	61
6.1.5	Discussion	62
6.2	One-Step Optimality for Bi-objective Problems	63
6.2.1	Introduction	63
6.2.2	Bounds for the Pareto Frontier	64
6.2.3	Properties of Lipschitz Bounds	65
6.2.4	The Implementation of One-Step Optimality	68
6.2.5	Numerical Experiments	74
6.2.6	Remarks	79
6.3	Multidimensional Bi-objective Lipschitz Optimization	80
6.3.1	Introduction	80
6.3.2	Lipschitz Bound for the Pareto Frontier	80
6.3.3	Properties of Local Lower Lipschitz Bound	84
6.3.4	Worst-Case Optimal Bisection	87
6.3.5	Trisection of a Hyper-Rectangle	89
6.3.6	Implementation of the Algorithms	89
6.3.7	Numerical Examples	91
6.3.8	Remarks	95
7	Statistical Models Based Algorithms	97
7.1	Introduction	97
7.2	Statistical Model	98
7.3	Multi-Objective P-Algorithm	99
7.4	Multi-Objective π -Algorithm	102
7.4.1	A New Approach to Single-Objective Optimization	102
7.4.2	The Generalization to the Multi-Objective Case	104
7.5	Experimental Assessment	107
7.5.1	Methodological Problems	107
7.5.2	Test Functions	108
7.5.3	Experiments with the P-Algorithm	109
7.5.4	Experiments with the π -Algorithm	116
7.6	Discussion and Remarks	120
8	Probabilistic Bounds in Multi-Objective Optimization	121
8.1	Introduction	121
8.2	Statistical Inference About the Minimum of a Function	122

8.3	Conditions on the Intersection of Pareto Fronts	124
8.4	Upper and Lower Estimates for the Pareto Front	126
8.5	Branch and Probability Bound Methods	127
8.6	Visualization	130
8.7	Discussion and Remarks	135
Part III	Applications	
9	Visualization of a Set of Pareto Optimal Decisions	139
9.1	Introduction	139
9.2	A Design Problem	139
9.3	Visualization of the Optimization Results	140
9.4	The Analysis of Exploratory Guess	144
9.5	Remarks	145
10	Multi-Objective Optimization Aided Visualization of Business Process Diagrams	147
10.1	Introduction	147
10.2	Visualization of Sequence Flow	148
10.2.1	A Brief Overview of Single-Objective Algorithms Aimed at Visualization of Sequence Flow	149
10.2.2	Description of the Problem	150
10.2.3	Binary-Linear Model	151
10.2.4	Optimization Problems of Interest	154
10.2.5	Optimization by Heuristic Methods	155
10.2.6	Numerical Experiments	158
10.2.7	Discussion and Remarks	161
10.3	Multi-Objective Allocation of Shapes	161
10.3.1	A Problem of the Allocation of Shapes	161
10.3.2	Allocation of Shapes by Multi-Objective Optimization ..	162
10.3.3	Branch and Bound Algorithm for Shape Allocation	164
10.3.4	Computational Experiments	169
