

Contents

Part I Condensed Matter Background

1 Preamble: Transport Coefficients Definition	3
2 Standard Metals and the Fermi Liquid	5
References.	9
3 The Fermi Liquid Breakdown: High-T_c Superconductivity	11
3.1 Cuprates: Crystalline Structure and Electronic Properties	12
3.2 Cuprates: Phase Diagram	15
3.3 Cuprates: In-Plane Transport Properties in the Non-superconducting Phase	16
3.3.1 Resistivity and Hall Angle	18
3.3.2 Magneto-Resistance and the Kohler's Rule	21
3.3.3 Thermal Transport.	23
References.	24
4 Theoretical Attempts	29
4.1 Anderson's Model	29
4.2 Phenomenological Marginal Fermi Liquid	30
4.3 Quantum Criticality	33
References.	35

Part II Introduction to Holography

5 The Gauge Gravity Duality	39
5.1 Review: Conformal Field Theory	39
5.1.1 The Conformal Group	39
5.1.2 Field Theory and Conformal Invariance	42
5.1.3 Unitarity Bounds.	48
5.2 Review: Anti-de Sitter Spaces	48
5.2.1 AdS as a Maximally Symmetric Solution of Einstein's Equations	48

5.2.2	Hyper-Surface Embedding and Geometric Properties	50
5.2.3	Geodesic Motion in AdS_{d+1}	51
5.2.4	Carter-Penrose Diagram and Conformal Boundary	53
5.3	Motivating the Duality	55
5.4	The GKPW Rule and Its Consequences	58
5.4.1	Holographic Renormalization and the Prescription for the Correlators.	61
5.5	An Example: Scalar Field in AdS_{d+1}	63
5.6	Thermal AdS/CFT	72
5.6.1	Introducing Temperature in Holography	75
5.6.2	Holography at Finite Charge Density	78
5.7	Summa: The Holographic Dictionary	81
	References.	82

Part III Thermo-electric Transport in AdS/CFT

6	Preamble: Linear Response Theory	85
	Reference	87
7	The Simple Reissner-Nordström Case	89
7.1	Bulk Solution	89
7.2	Fluctuations	92
7.2.1	Renormalization of the Fluctuation Action	93
7.3	Correlators and Transport Coefficients	94
7.4	Physical Properties of Transport Coefficients	96
	References.	98
8	Momentum Dissipation in Holography	99
8.1	Adding a Mass to the Graviton to Break Momentum Conservation.	99
8.1.1	The Massive Gravity Model	99
8.1.2	Background and Thermodynamic	100
8.1.3	Massive Gravity and Momentum Dissipation	102
8.1.4	Fluctuations and Transport in the Massive Case	103
8.1.5	Counter-Terms and Transport Coefficients Definition	106
8.2	Spectral Properties of Transport Coefficients	107
8.3	DC Transport Coefficients	108
8.3.1	The Electric Conductivity and the Seebeck Coefficient	108
8.3.2	Thermal Conductivity and Onsager Reciprocity	112
8.3.3	DC Properties of the Transport Coefficients	114
8.4	Adding the Dilaton.	116
8.4.1	Properties of DC Transport Coefficients	118
8.5	Holographic Magneto-Transport	119
8.5.1	Thermodynamics.	120
8.5.2	Transport Coefficients	122

8.5.3	Structure of the Thermoelectric Transport Coefficients	128
8.5.4	Bulk Electromagnetic Duality and Its Consequences from the Boundary Perspective	130
	References.	131
9	Physical Implications.	133
9.1	Criticality and Diffusion Bounds	134
9.1.1	The Shear Viscosity Bound and the Concept of Planckian Dissipation	134
9.1.2	The Diffusivity Bounds Conjecture in Cuprates	137
9.1.3	On the Existence of Diffusivity Bounds in Holography	140
9.2	Holographic Inspired Phenomenology	145
	References.	149
	Appendix A: Basics of Fermi Liquid Theory	151
	Appendix B: Asymptotically AdS Space-Time: AdS Black Holes.	175
	Appendix C: Radial Quantization and Unitarity Bounds.	183
	Appendix D: Effect of Linear Source in Time on DC Transport.	189
	Appendix E: Technical Aspects of Holographic Magneto-Transport.	191
	Appendix F: Einstein Relations for Charge and Heat Diffusion Constants.	195
	Curriculum Vitae	197
