# Contents

1 **Introduction** ............................................. 1  
   1.1 Historical Perspective of Optical and Wireless Communication Systems  
       1.1.1 Wireless Communication Historical Perspective ..... 2  
       1.1.2 Optical Communication Historical Perspective ..... 6  
   1.2 Optical Communication Systems and Networks Fundamentals ..... 8  
   1.3 Wireless Communication Systems Fundamentals ........... 14  
   1.4 Organization of the Book  
   1.5 Concluding Remarks  
   References ............................................ 27  

2 **Propagation Effects in Optical and Wireless Communications**  
   **Channels, Noise Sources, and Channel Impairments**  
   2.1 Electromagnetic Field and Wave Equations  
       2.1.1 Vector Derivatives (Grad, Div, and Curl)  
               in Orthogonal Curvilinear Coordinate System ..... 32  
       2.1.2 Vector Derivatives (Grad, Div, and Curl)  
               in Cylindrical Polar and Spherical Coordinate Systems ..... 34  
   2.2 Propagation of Electromagnetic Waves  
       2.2.1 Propagation of Plane Waves  
       2.2.2 Vectorial Nature of the Light, Snell’s Law of Refraction, Reflection Coefficients,  
               and Total Internal Reflection  
       2.2.3 Electromagnetic Potentials and Electromagnetic Waves  
       2.2.4 Interference, Coherence, and Diffraction in Optics  
       2.2.5 Laser Beam Propagation over the Atmospheric Turbulence Channels  
   References ............................................ 85

    6.2.3 Combined Outage and Average Error Probability Scenario ........................................ 413
    6.2.4 Moment-Generating Function (MGF)-Based Approach to Average Error Probability Calculation ........................................ 414
    6.2.5 Performance Evaluation in the Presence of Doppler Spread and Fading .................. 415
### 6.3 Channel Equalization Techniques

- **ISI-Free Digital Transmission and Partial-Response Signaling**: 417
- **Zero-Forcing Equalizers**: 422
- **Optimum Linear Equalizer in MMSE Sense**: 427
- **Wiener Filtering**: 429
- **Adaptive Equalization**: 430
- **Decision-Feedback Equalization**: 432
- **MLSD (MLSE) or Viterbi Equalization**: 433
- **Blind Equalization**: 436

### 6.4 Synchronization Techniques

- **Adaptive Modulation Techniques**: 445
- **Variable-Power Variable-Rate Modulation Techniques**: 447
- **Adaptive Coded Modulation**: 453

### 6.5 Adaptive Modulation Techniques

- **Volterra Series-Based Equalization**: 455
- **Digital Backpropagation in Fiber-Optics Communications**: 457

### 6.6 Optical Communication Systems with Coherent Optical Detection

- **Balanced Coherent Optical Detection for 2-D Modulation Schemes**: 462
- **Polarization Diversity and Polarization-Division Demultiplexing**: 468
- **Homodyne Coherent Optical Detection Based on PLLs**: 470
- **Phase Diversity Receivers**: 471
- **Dominant Coherent Optical Detection Noise Sources**: 473

### 6.7 Compensation of Atmospheric Turbulence Effects

- **Adaptive Optics Techniques**: 480
- **SLM-Based Backpropagation Method**: 488

### 6.10 Concluding Remarks

- **References**: 491

### 7 OFDM for Wireless and Optical Communications

- **Introduction, OFDM Basics, and Generation of Subcarriers Using Inverse FFT**: 495
- **Introduction to OFDM**: 495
- **OFDM Basics**: 496
- **Generation of OFDM Signals**: 498
