Contents

1 Introduction .............................................. 1
   1.1 Introduction to Transition Metal Oxide Materials .......... 1
       1.1.1 Introduction ..................................... 1
       1.1.2 The Demand for Novel Functional Materials .......... 2
       1.1.3 Unique Property and Wide Applications of TMOs ...... 2
       1.1.4 Perovskite Oxides ................................ 4
       1.1.5 Some Typical Transition Metal Oxides ............... 5
   1.2 Photocatalytic Water Splitting ............................. 7
       1.2.1 Why Is Photocatalytic Water Splitting Needed? ......... 7
       1.2.2 Honda-Fujishima Effect and History of Photocatalytic
             Water Splitting ................................... 8
       1.2.3 Basic Principle and Steps of Photocatalytic Water
             Splitting ........................................... 10
   1.3 Nonlinear Optical Properties of Saturable Absorption ....... 13
   1.4 The Strain-Induced Effect ................................ 13
   1.5 Thesis Outline ........................................ 14
   Bibliography .............................................. 15

2 Sample Preparation and Characterization Techniques ............ 19
   2.1 Solid State Synthesis ..................................... 19
   2.2 Pulsed Laser Deposition ................................... 20
       2.2.1 History of Pulsed Laser Deposition ................. 20
       2.2.2 The Mechanism and Process of Pulsed Laser
             Deposition ............................................ 21
       2.2.3 The Advantage of Pulsed Laser Deposition .......... 22
   2.3 Crystal Structure Characterization .......................... 23
   2.4 Photocatalytic Water Splitting Property Measurement ....... 24
4.3 Results and Discussion .................................. 65
  4.3.1 The Photocatalytic Efficiencies of MNbO₃ ............. 65
  4.3.2 The Electrical Transport Properties of MNbO₃ .......... 68
  4.3.3 The Absorbance Efficiencies and Plasmon Resonance Frequencies of MNbO₃ .................................. 69
  4.3.4 The Transient Absorbance Spectra of MNbO₃ .......... 70
4.4 Conclusion ........................................... 73
Bibliography .............................................. 73

5 New Tunable and Low-Loss Correlated Plasmons in Mott-like Insulating Oxides .......................................... 75
  5.1 Introduction .......................................... 75
    5.1.1 Introduction to This Chapter ........................ 75
    5.1.2 The Motivation to Study Plasmons in SrNbO₃⁺δ Family Material .................................. 75
  5.2 Experimental Procedure ................................. 76
  5.3 Results .............................................. 77
    5.3.1 The Electrical Transport Property of SrNbO₃⁺δ .......... 77
    5.3.2 The Complex Dielectric Function and Loss Function of SrNbO₃⁺δ .................................... 77
    5.3.3 Optical Conductivity and Spectral Weight Analysis ...... 81
    5.3.4 Oxygen Extra Planes in SrNbO₃⁺δ ................... 83
    5.3.5 Thickness-Dependent Study of Correlated Plasmons ...... 84
  5.4 Discussion ........................................... 85
  5.5 Conclusion ........................................... 87
Bibliography .............................................. 88

6 The Nonlinear Optical Properties of MNbO₃ (M = Ca, Sr, Ba) Thin Films ............................................... 91
  6.1 Passive Mode Locking and Saturable Absorption .............. 91
    6.1.1 Introduction to Passive Mode Locking ........................ 91
    6.1.2 Saturable Absorber Materials ........................... 92
  6.2 Experimental Procedure ................................. 92
  6.3 Results and Discussion .................................. 94
    6.3.1 The Crystal Structure of MNbO₃ Thin Films Grown on LSAT Substrates .................................. 94
    6.3.2 The Optical Absorption Property of MNbO₃ Thin Films Grown on LSAT Substrates ........................ 95
    6.3.3 The Electrical Transport Property of MNbO₃ Thin Films Grown on LSAT Substrates ...................... 97
    6.3.4 The Nonlinear Optical Properties of MNbO₃ Thin Films Grown on LSAT Substrates .................................. 98
  6.4 Conclusion ........................................... 100
Bibliography .............................................. 100
Crystal Structure, Electronic and Optical Properties of Epitaxial Alkaline Earth Niobate Thin Films
Dongyang, W.
2017, XVI, 120 p. 73 illus., 41 illus. in color., Hardcover
ISBN: 978-3-319-65911-4
